## 1 、 Door handle opening and closing

### 1.1 Door handle open

There are 8 ways to open the door handle:

- Short press the end button on the door handle (Corresponding to the door handle to open)
- Unlocked, opening the door from inside the car (Corresponding to the door handle to open)
- When the car is locked, press the end of the door handle to unlock the car (all door handles open)
- Card key to unlock vehicle(all door handles open)
- The vehicle is not sleeping and the phone key is near (all door handles open)
- Mobile APP to unlock the vehicle(all door handles open)
- When the car is locked, the gear shifts to P gear (all door handles open)
- Click on the central control screen to unlock(all door handles open)

### 1.2 Door handle closed

There are 5 ways to close the door handle:

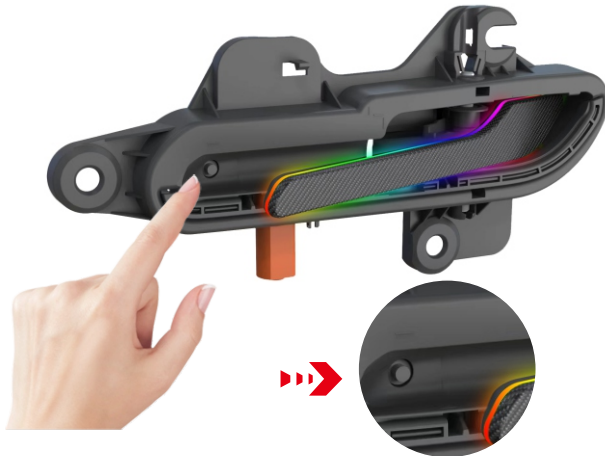

- When the door handle is in the open state, pull the door handle and release it (corresponding to the door handle being closed)
- When the door handle is opened for 10s, no operation is triggered (corresponding to the door handle being closed)
- Door closed (corresponding to door handle closed)
- Lock the car (all door handles closed)
- Vehicle speed greater than 0 (all door handles closed)

## 2. light effect configuration

### 2.1 Welcome lighting effect settings

#### 2.1.1 Setting via door handle button

- Short press the front left or right door handle button to trigger the door handle to pop open
- Press and hold the inner button of the door handle for 3 seconds, wait for the green light of the door handle to flash 3 times, the system enters the welcome light effect setting state
- Short press the inner button of the door handle to set the welcome light effect, there are 10 kinds of light effects for users to choose
- After about 10 seconds of no operation, the system will automatically save the current light effect and exit the welcome light effect setting state

#### 2.1.2 Setting through the steering wheel buttons

- Push the left wheel of the steering wheel to the right and keep it for 2 seconds, wait for the door handle to pop open and then release it
- The door handle flashes the green light three times, and the system enters the welcome light effect setting state
- Push the left scroll wheel to the left to select the previous light effect
- Push the left scroll wheel right to select the next light effect
- After about 10 seconds of no operation, the system automatically saves the current light effect and exits the welcome light effect setting state

### 2.2 Steering and dual flash settings

- Turn on vehicle double flash
- Enter the welcome lighting effect setting state (see 2.1 for details)
- Press and hold the door handle button or the left wheel of the steering wheel to the right Press and hold for 2 seconds to enter the steering light effect setting state

- The door handle light flashes synchronously with the original car's double flash, indicating that the system enters the steering and double flash effect setting state
- Short press the door handle button or short push the left wheel of the steering wheel to select the door handle lighting effect
- After about 10 seconds of no operation, the system automatically saves the current light effect and exits the steering and dual flash effect setting state

### 2.3 Setting the light prompt for car lock

- Turn off the vehicle's left/right turn/double flashing lights
- Enter the steering and double flash effect setting state (see 2.2 for details)
- Press and hold the door handle button or the left wheel of the steering wheel to the right and press and hold for 2 seconds to enter the lock light effect setting state
- Door handle light breathing display, indicating that the system enters the lock light setting state
- Short press the door handle button or short push the left wheel of the steering wheel to select the door handle lighting effect
- After about 10 seconds of no operation, the system automatically saves the current light effect and exits the lock light effect setting state

## Remote upgrade operation

### 3. Remote upgrade operation

#### 3.1 Upgrade preparation

Mobile WI-FI hotspot settings:

- Hotspot name: T8
- Hotspot password: 88888888

**Note:** 1) WI-FI hotspot only supports 2.4G frequency band  
 2) Apple mobile phone WI-FI hotspot name modification process: Settings -"General-"About this machine-"Name, change the name to T8

#### 3.2 Upgrade steps

- Press the rear left or right door handle button once, after the door handle pops out,
- Press and hold the button inside the door handle for about 8 seconds, wait for the door handle light to flash green, and release the button.
- The door handle light flashes green, indicating that the system has entered the upgrade state. The device will automatically connect to the mobile phone WI-FI hotspot for firmware download and upgrade.
- After the upgrade is complete, all door handles will pop up automatically and flash green light to indicate that the upgrade is successful.

#### 3.3 Tips for the upgrade process

- The doorknob light flashes green -- it means the system is connecting to the phone's wi-fi hotspot
- The doorknob light is always on in green -- it means the system is successfully connected to the mobile phone wi-fi hotspot
- The doorknob light flows yellow -- it means that the firmware is being downloaded
- The door handle LED light is off - it means that the firmware is being refreshed

#### 3.4 Upgrade result prompt

- The door handle light flashes blue 5 times - it means the system has the latest firmware
- The doorknob light flashes red 5 times - it means the firmware upgrade failed
- The doorknob light flashes green 5 times - it means the firmware upgrade is successful

#### 3.5 Upgrade Notes

- Make sure that the mobile phone hotspot is in the 2.4G band (5G band is not supported)
- Make sure your device is within range of your phone's hotspot
- Do not trigger the door handle or start the car at will during the upgrade process
- Make sure the green light or blue light or red light flashes 5 times, automatically exit the upgrade and then do other operations
- If the red light flashes 5 times (indicating that the upgrade failed), you can turn off/on the WI-FI hotspot of the mobile phone, and then try the upgrade again. If the upgrade fails, please contact the after-sales service.
