ASSEMBLY GUIDE

Prepare your scooter by disconnecting the brakes and removing both wheels.

- 1 Assemble the **Wire Stays** to the correct **Mudguards** as shown in the diagram. Leave the **Connector Screws** untightened as these are used for final positioning in steps 3 and 7.
- 2 Attach front mudguard and wire stay to the front fork. Use **12mm and 10mm Bolts**, **Flat Washers**, and a **M6 Nut** (as spacer). Tighten fully.
- 3 Secure front stays in position by tightening **Connector Screws** with a crosshead screwdriver.
- 4 Fit front wheel and tighten fully using 15mm spanner.
- 5 Secure rear mudguard to the end of frame with **12mm Bolt**, **Split Washer**, and **Flat Washer**. Tighten fully.
- 6 Secure rear wire stays to the rear dropout with **16mm Bolts**, **Nuts**, and **Flat Washers**. Tighten fully.
- 7 Secure rear stays in position by tightening **Connector Screws** with a crosshead screwdriver.
- 8 Fit the rear wheel, tighten fully using 15mm spanner. Reconnect both brakes.
