How to setup your timepiece
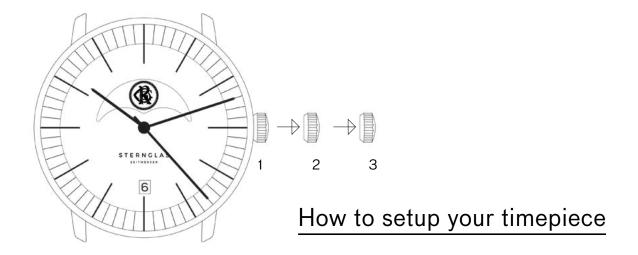

O1   Remove the lock on the crown.

O2   Your timepiece has a moon phase display.
             To set the current moon phase, pull the
             crown out to position 3 and wind it until the
             correct moon phase indicator appears.

O3   You can now set the time. Keep the crown at
             position 3 and wind it to the correct time.

O4   To set the date, push the crown in by one
             position so that it is in position 2. Turn the
             crown clockwise until the correct date is
             displayed. Now you can push the crown
             back to the starting position (position 1).

             Note: Your date changes at noon? This is
             because the movement does not „know" if it
             is noon or midnight. If so, simply wind your
             timepiece forward by 12 hours.
