LAMB CONCENTRATE HIGH PERFORMANCE

Lambs on a high grain feedlot diet or on a supplementary feeding program will often be deficient in the essential vitamins and minerals required to optimize growth, performance, reproduction and maintenance.

Boyd Feed Systems Lamb Concentrate High Performance (BFSLC HP) is a nutritionally designed formulation for ready inclusion in high grain feedlot diets or supplementary feeding programs for sheep and lambs.

Boyd Feed Systems Lamb Concentrate High Performance provides a balanced profile of vitamins, trace elements and minerals. The combination of vitamins, minerals and non-protein nitrogen (NPN) and lasalocid sodium (Bovatec®) enables sheep and lambs to obtain more energy from any ration, improving average daily gain and overall feed efficiency.

How should the pellet be mixed with grain?

The most effective way to mix BFSLC HP with grain is via a vertical or ribbon mixer. This will ensure even distribution of the pellet through the mix. Alternatively, if a mixer is not available, pellet can be added at a proportional rate while the grain is being augured, ensuring care is taken to maintain even distribution.

Why use a pellet instead of powder?

Once mixed, the pellet will remain evenly spread throughout the grain and will not fall to the bottom of the feeder as may occur when using powdered supplement. This ensures that sheep and lambs receive consistent amounts of supplement while consuming the final ration.

What buffers are included in the product?

BFSLC HP contains Acid buff to help control and/or prevent acidosis. A critical part of managing the risk associated with acidosis is correct feedlot induction and ration management.

What Rumen Modifiers are included in the product?

Lasalocid sodium (Bovatec®), a registered ionophor, is included in BFSLC HP as a rumen modifier. It works to shift rumen fermentation patterns to improve feed conversion efficiencies and increase average daily gain. Lasalocid sodium has also been shown to decrease the incidence of coccidiosis.

Are any other additives required while using Boyd feed System Lamb Concentrate High Performance?

No, the product provides a complete source of essential vitamins and minerals. We suggest contacting your local Boyd Feed Systems representative to discuss options before including any other additives in the ration.

Can Boyd Feed System Lamb Concentrate High Performance be fed to any other animals?

NO, feeding this product to horses, other equines or dogs may be fatal, as it contains urea. This product is purposely designed for feeding to sheep and lambs only.

Lamb Concentrate – High Performance

Nutritional Analysis
DM Basis

Vitamin A	KIU/Kg	34
Vitamin E	IU/Kg	214
Protein	%	15
Calcium	%	12
Salt	%	4 (max)
Urea	%	1 (max)

PLUS TRACE ELEMENTS:

Cobalt, Manganese, Zinc, Iodine & Selenium.

Rumen Modifiers/Buffers:

Lasalocid Sodium: 642.5ppm
Contains Acid Buf

PACK SIZE

25kg bag.

RATE OF USE

5% or 50kg/tonne of finished feed

DIRECTION

Mix with grain
Store product in a cool, dry place.
