LAMB CONCENTRATE NATURAL – ANTIBIOTIC FREE

Lambs on a high grain feedlot diet or on a supplementary feeding program will often be deficient in the essential vitamins and minerals required to optimize growth, performance, reproduction and maintenance.

Boyd Feed Systems Lamb Concentrate – Natural Antibiotic Free (BFSLC Natural) is a nutritionally designed formulation for ready inclusion in high grain feedlot diets or supplementary feeding programs for sheep and lambs.

Boyd Feed Systems Lamb Concentrate Natural – Antibiotic Free provides a balanced profile of vitamins, trace elements and minerals. The combination of vitamins, minerals and non-protein nitrogen (NPN) and Actifor enables sheep and lambs to obtain more energy from any ration, improving average daily gain and overall feed efficiency.

How should the pellet be mixed with grain?

The most effective way to mix BFSLC Natural – Antibiotic free with grain is via a vertical or ribbon mixer. This will ensure even distribution of the pellet through the mix. Alternatively, if a mixer is not available, pellet can be added at a proportional rate while the grain is being augured, ensuring care is taken to maintain even distribution.

Why use a pellet instead of powder?

Once mixed, the pellet will remain evenly spread throughout the grain and will not fall to the bottom of the feeder as may occur when using powdered supplement. This ensures that sheep and lambs receive consistent amounts of supplement while consuming the final ration.

What buffers are included in the product?

BFSLC Natural – Antibiotic Free contains Acid buff to help control and/or prevent acidosis. A critical part of managing the risk associated with acidosis is correct feedlot induction and ration management.

Are any other additives required while using Boyd feed System Lamb Concentrate Natural – Antibiotic Free?

No, the product provides a complete source of essential vitamins and minerals. We suggest contacting your local Boyd Feed Systems representative to discuss options before including any other additives in the ration.

Can Boyd Feed System Lamb Concentrate Natural – Antibiotic be fed to any other animals?

NO, feeding this product to horses, other equines or dogs may be fatal, as it contains urea. This product is purposely designed for feeding to sheep and lambs only.

What are Phyto Molecules?

In contrast to conventional lamb concentrates that contain in feed medications, the BFS Natural Lamb Concentrate uses Phyto-Molecules which are a combination of essential oils, natural spices and saponins which stimulate feed intake and rumen health. These naturally derived plant extracts help maintain pH in the rumen when feeding high-carbohydrate rations whilst improving overall average daily gain and feed efficiency.

Lamb Concentrate – Natural Antibiotic Free

Nutritional Analysis
DM Basis

Vitamin A	KIU/Kg	34
Vitamin E	IU/Kg	214
Protein	%	15
Calcium	%	12
Salt	%	4 (max)
NPN	%	2 (max)

PLUS TRACE ELEMENTS:

Cobalt, Manganese, Zinc, Iodine & Selenium.

Actives/Buffers:

Contains Acid Buf
Contains Phyto Molecules

PACK SIZE

25kg bag.

RATE OF USE

5% or 50kg/tonne of finished feed

DIRECTION

Mix with grain
Store product in a cool, dry place.
