

# ProDrill

## SERIES

Introducing the new high performance ProDrill Series carbide drills from De Boer Tool. Designed with point geometry which efficiently breaks chips and provides excellent wear resistance, allowing for high feed rates.

Available in Imperial and Metric diameters from 3.0mm - 16.0mm, with 3xD, 5xD, 8xD, and 12xD lengths. Metric h6 shanks.

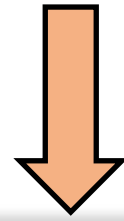

### ProDrill Features

- Coolant-through drills feature a double margin for better tool stability, hole straightness and quality. Premium submicron grade carbide is utilized with enhanced toughness for durability
- Non-coolant drills feature a single margin design, and general purpose submicron grade carbide to maximize the balance of performance and price
- Shaped flutes ensure chip flow is directed up and away from the work zone
- Cutting edge hone protects the edge and increases coating adhesion, reducing operating temperatures and prolonging tool life
- Polished PVD Coating handles very high operating temperatures with good lubricity, high wear resistance, and reduced torque load
- High precision m7 drill diameter tolerance
