# Providing solutions for cutting-edge toolholding

Our holistic toolholding systems excel with extraordinary reliability, high precision and outstanding quality.

**Pioneering spirit** Fritz Weber, a Swiss master craftsman, tapped into the promising optimism in the 1950s and founded a small business called Fritz Weber Feinmechanik und Werkzeugbau. With his innovative spirit and stern determination, Fritz Weber gradually expanded his range of products. The company, now called REGO-FIX AG, achieved international recognition in 1972 with the invention of the ER clamping system, changing the toolholding industry forever. The ER System, made in Switzerland, is an industrial standard clamping element. It set the industry standard and even became DIN Standard (DIN 6499) in 1993. Today, the ER collet made by REGO-FIX is still the most used clamping collet worldwide.

**Shaping the future** REGO-FIX is an international family-owned company that is run by the sons of Fritz Weber. With its over 220 employees, REGO-FIX manufactures and markets high-precision toolholding systems worldwide. Headquartered

in Tanniken, Switzerland, the company has established itself as one of the leading manufacturers of toolholding systems and enjoys an excellent industry-wide reputation. Through its close network of distributors and subsidiaries in the US and China, REGO-FIX is strategically well positioned and possesses a worldwide presence in key markets. With groundbreaking product inventions, REGO-FIX developed from a small company to a global solution provider for cutting-edge toolholding systems. At the core of every product lies an aim for machining excellence and a passion for precision.

**Cradle of precision** REGO-FIX manufactures its products in Switzerland to fit highest quality standards. The products are used in the fields of automotive, aerospace, medical engineering, watchmaking, telecommunications and also in the die and mold industry.

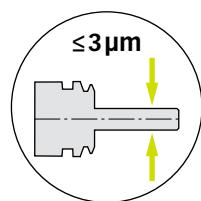

### powRgrip® System

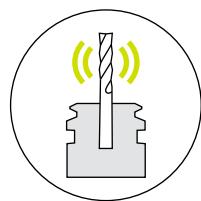

## Meet high machining demands

The powRgrip System provides excellent runout, high-vibration dampening as well as easy and secure handling for demanding high-speed milling and drilling. The clamping unit PGU 9500 has been awarded a Red Dot award for industrial design, highlighting the good usability and outstanding design of the machine.

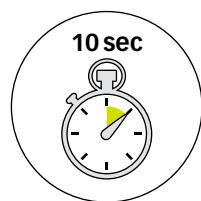

### Key advantages

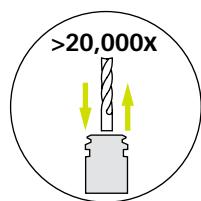

Total system runout  
TIR  $\leq 3 \mu\text{m}$  at 3xD.

Excellent vibration dampening.

Tool ready for use in less than 10 seconds.

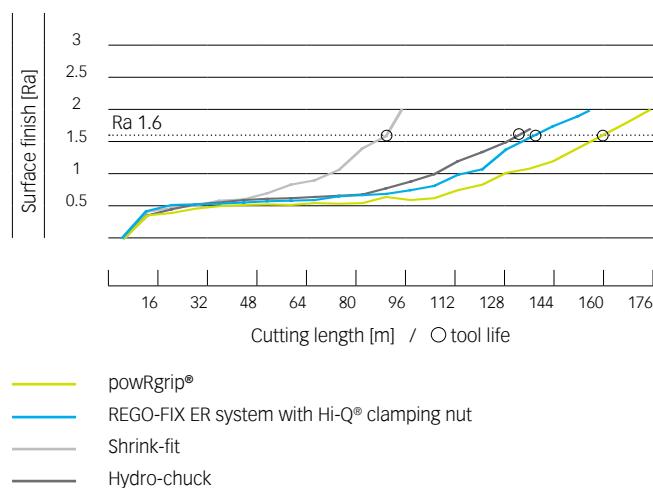

Maximum clamping force and low runout, even after 20,000 tool changes.

**Power and precision combined** An outstanding tool runout is one of the most positive influences on enhancing your tool life.

### Increased cutter tool life with the powRgrip® System

Influence of tool runout on tool life / Source: In-house testing

# Three systems – one brand

Our brand unites three different toolholding systems. Each system has different strengths to fit your machining needs, but at the heart of each system lies our aim for toolholding excellence.

## powRgrip® System

For high-end machining with a total system **TIR ≤ 0.0001" (3 µm) at 3xD**

### PG toolholders

Taper accuracy AT3

Surface finish  
max. Ra 0.25

High transferable torque  
up to 1,100 Nm

### PG collets

Clamping range  
from 0.0079" up to 1"

Highly durable coating  
ensures longevity

Clamps all shanks  
with tolerance h6

Vibration dampening  
for high RPM

### A holistic system approach

All parts are designed for exclusive fit to ensure toolholding excellence.

## ER System

Our ideal system for standard machining

### ER toolholders

Runout TIR ≤ 0.0001" (3 µm)

Taper accuracy AT3

Surface finish max. Ra 0.25

Factory balanced

### ER collets

Wide clamping range: from ER 8 up to ER 50 and for diameters from 0.0079" up to 1.375"

Clamping capacity 0.0197" to 0.0787"

Runout TIR ≤ 0.0004" (10 µm) at 3xD for ER standard

Runout TIR ≤ 0.0002" (5 µm) at 3xD for ER-UP

### ER clamping nuts

Collet-locking system

Balanced by design

Special coating improves transferable torque  
and protects against corrosion

## micRun® System

Total system **TIR ≤ 0.0001" (3 µm) at 3xD**

### MR toolholders

Taper accuracy AT3

Polished surface for improved performance

Balanced for high RPM

Vibration dampening

### MR collets

Clamping range from 0.0394" to 0.7874"

Nominal diameter shanks h11

### MR clamping nuts

Collet-locking system

Balanced by design

Grooveless design for higher RPM

Freewheel wrench head

### A holistic system approach

All parts are designed for exclusive fit to ensure toolholding excellence.

# Concentricity and optimum vibration damping saves time and money

**Ambitious toolholding** Thanks to the unique clamping method of the PGU, clamped tools can be used in production quickly and safely. The advanced technology not only increases the work safety for the user, but also reflects our ecological thinking, which manifests itself – among other things – through low energy consumption during the clamping process. The clamping unit clamps the powRgrip collet into the toolholder with a force of up to nine tons. The pressure fit provided between the collet and toolholder creates a radial force, which is concentrated on the tool shank via the slotted collet and holds the tool safely and with a high degree of concentricity.

**The powRgrip® System consists of**

- // High-precision powRgrip collet
- // powRgrip toolholder
- // powRgrip clamping unit (automatic or manual)

**How the powRgrip® System works**

- // Insert the powRgrip collet into the powRgrip toolholder
- // Insert the cutting tool into the powRgrip collet
- // Clamp collet and cutting tool into the powRgrip toolholder with a powRgrip clamping unit PGU (automatic) or PGC (manual)

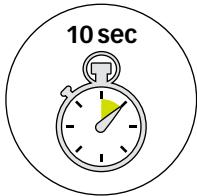

# Toolholding made fast, safe and easy

The clamping unit PGU 9500 has been awarded the Red Dot design award for industrial design, highlighting the good usability and outstanding design of the machine.

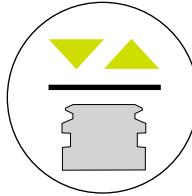

reddot award 2015  
honourable mention industrial design

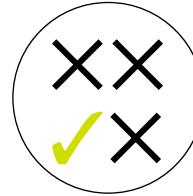

## Key advantages

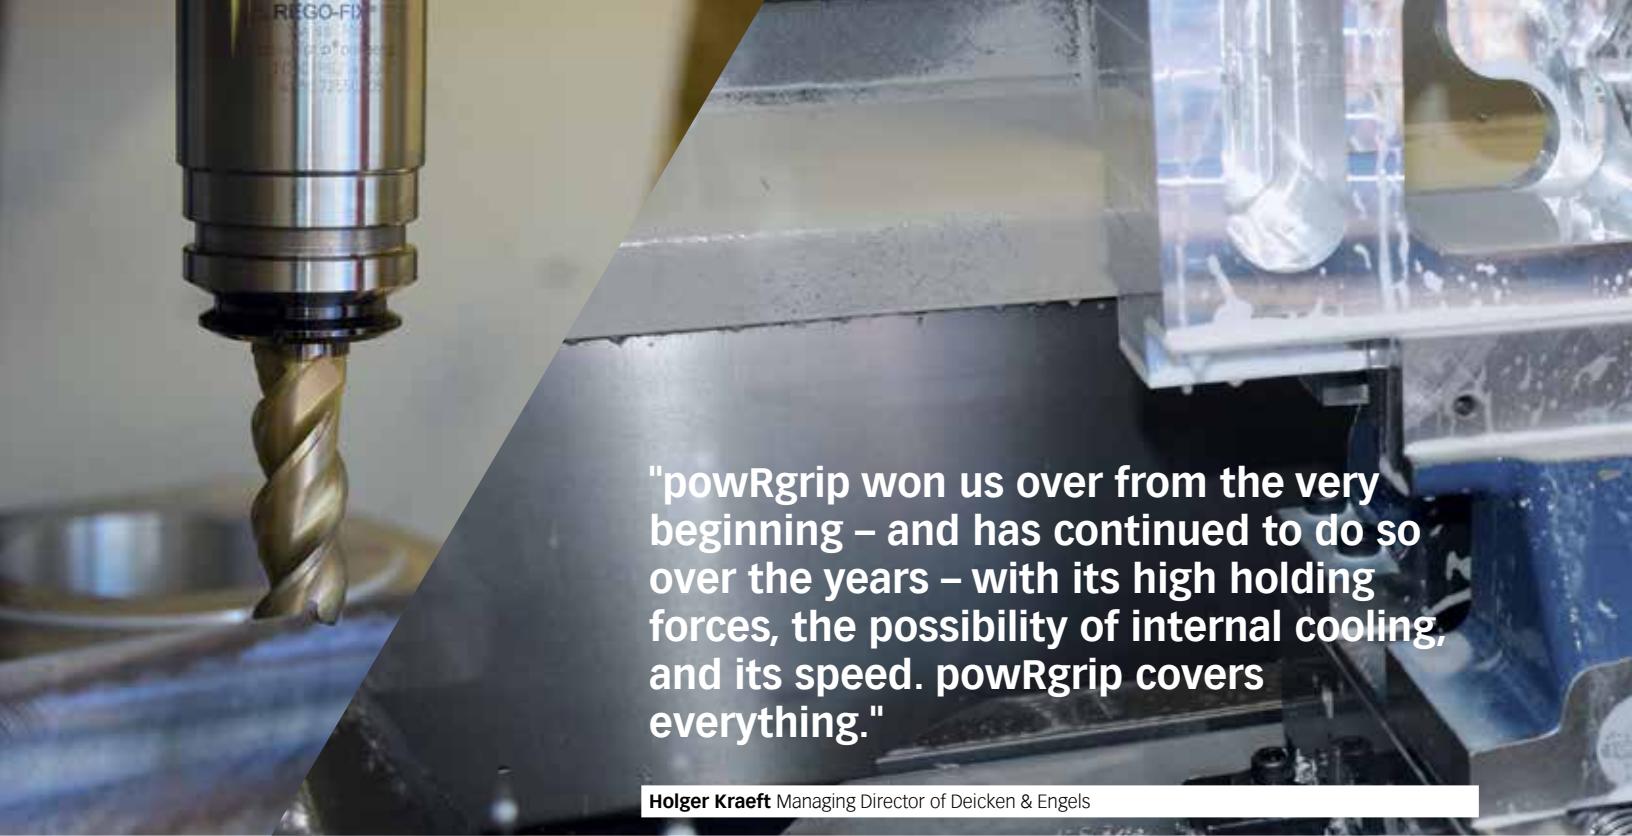

Clamp the tool safely and securely by pushing just one button. The clamping will take less than 10 seconds, without the use of heat.

Clamp tools with maximum clamping force and best runout in the powRgrip collet and toolholder.

Smart System – no setting of parameters required. Clamping pressure is controlled by the insertion of the respective clamping insert (APG). There are five clamping inserts (APG) available for the clamping of different collet sizes.

**"powRgrip won us over from the very beginning – and has continued to do so over the years – with its high holding forces, the possibility of internal cooling, and its speed. powRgrip covers everything."**

Holger Kraeft Managing Director of Deicken & Engels

Customer testimonial: powRgrip® in use

[Home](#)

## Going all in with powRgrip

Contract manufacturer Deicken & Engels Maschinenfabrik GmbH & Co. KG has based its entire production on a single toolholding system: powRgrip. The company in northern Germany has experienced firsthand the flexibility of powRgrip and its runout accuracy and speed.

**Improving efficiency and reducing costs** “During the course of a machine and tooling technology changeover to solid carbide high-speed tools in 2009, we made our initial investment in the powRgrip toolholding system, which established the basis for our highly innovative production,” explained Holger Kraeft, Managing Director of Deicken & Engels.

**Remarkable flexibility** “Initially, the focus was on setting up cutting data and the acquisition of new machines and tools. The next step is now the optimization process—improving efficiency, reducing costs, and saving time.” This is where powRgrip plays a central role in Stuhr, because the toolholding system from REGO-FIX is the only system used in the entire production. Just one system for grinding, finishing, roughening, and thread-cutting—proof of the high flexibility of powRgrip. In the meantime, two powRgrip units are used for all applications in the production. This is all the more noteworthy, because Deicken & Engels serves a very broad

diversity of customers and industries, thus handling a wide variety of materials and work processes.

**Workmaterial flexibility** Materials such as aluminium alloys, common structural steels, stainless steels, high-strength alloys, plastics, forged stainless steels, and special steels with high tensile strengths of up to 1,200 N/mm<sup>2</sup> are difficult to machine, but they can all be mastered with powRgrip. After years of use, no one at Deicken & Engels can recall a time in which they could not count on the strengths of powRgrip—with its runout accuracy and holding force.

The set up (tool change times) and the question of how to save time were also an important emphasis at the northern German company. Deicken & Engels operates with the strategy of always keeping 60 basic tools in the machine. Before powRgrip®, all the tools in the machine had to be changed out. Now the contract manufacturer works with

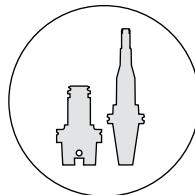

## Home

a base stock of tools which remain in the machine. With a 100-piece tool magazine, basic equipment with 60 tools remain in the machine and can be used for approximately 80% of all machining. With this strategy, a greater initial investment had to be made for the basic equipment of the machines. In the long run this way is without a doubt the more sustainable investment.

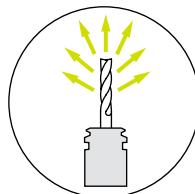

Deicken & Engels has achieved improvements in production with the extra-long powRgrip toolholders, purchased from REGO-FIX as standard equipment. Even with the pivot-head machines that the company uses, the machining of workpieces is sometimes a challenge. The system is already a great help – but the bar is being constantly raised. If an extension of 400 mm is sufficient today, the customer will assume tomorrow that a standard of 500 mm will be available. In combination with the Coramant Capto interface, the contract manufacturer achieves very good results with extra-long toolholders and optimal results with the standard lengths supplied by REGO-FIX.

**True fans** powRgrip has absolutely proven its value at Deicken & Engels. The advantages of the system – perfection and precision – were quickly recognized. Deicken & Engels consider themselves to be big powRgrip fans and are convinced that their production is now well-armed for a successful future.

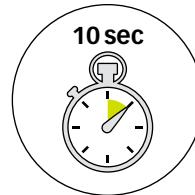

### At a glance

XL length toolholders are standard in the REGO-FIX product range and are immediately available. Their long and slim design allows for precise machining even with limited space.

Ultimate work material flexibility with powRgrip. Even difficult-to-machine materials with high tensile strengths can be machined successfully.

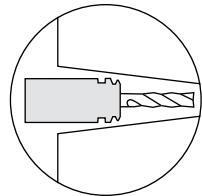

Clamp the tool safely and securely by pushing just one button. The clamping will take less than 10 seconds, without the use of heat.

# XL vibration dampening

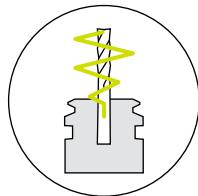

Optimize your surface finish and extend tool life by minimizing occurring vibrations during machining.

**Minimize tool vibrations** The MICRO-FRICTION DAMPENING™ (MFD) technology (pat. pend.) by REGO-FIX allows our XL toolholders to dissipate vibrations faster than standard long-reach toolholders. Dampening the vibrations faster means that your cutting tool, part and spindle will see less vibrations resulting in better surface finishes, longer tool life and less spindle wear. All REGO-FIX XL toolholders are balanced to G 2.5 @ 5,000 rpm.

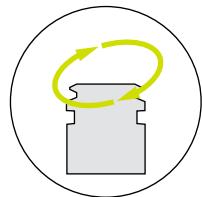

## Key advantages

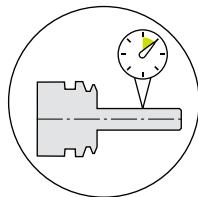

Minimal outside dimensions:  
long and slim design.

Exclusive vibration-  
dampening design.

Balanced by design.

Total system runout  
 $TIR \leq 10 \mu m$  at  $3 \times D$ .

Home

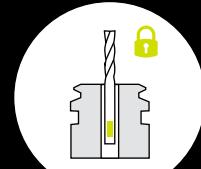

# Form-fit for 100 % pullout protection

With our innovative secuRgrip® solution,  
we offer a total tool pullout protection for the PG System.

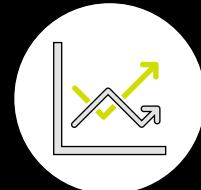

Threaded insert for end mill flat

## Key advantages

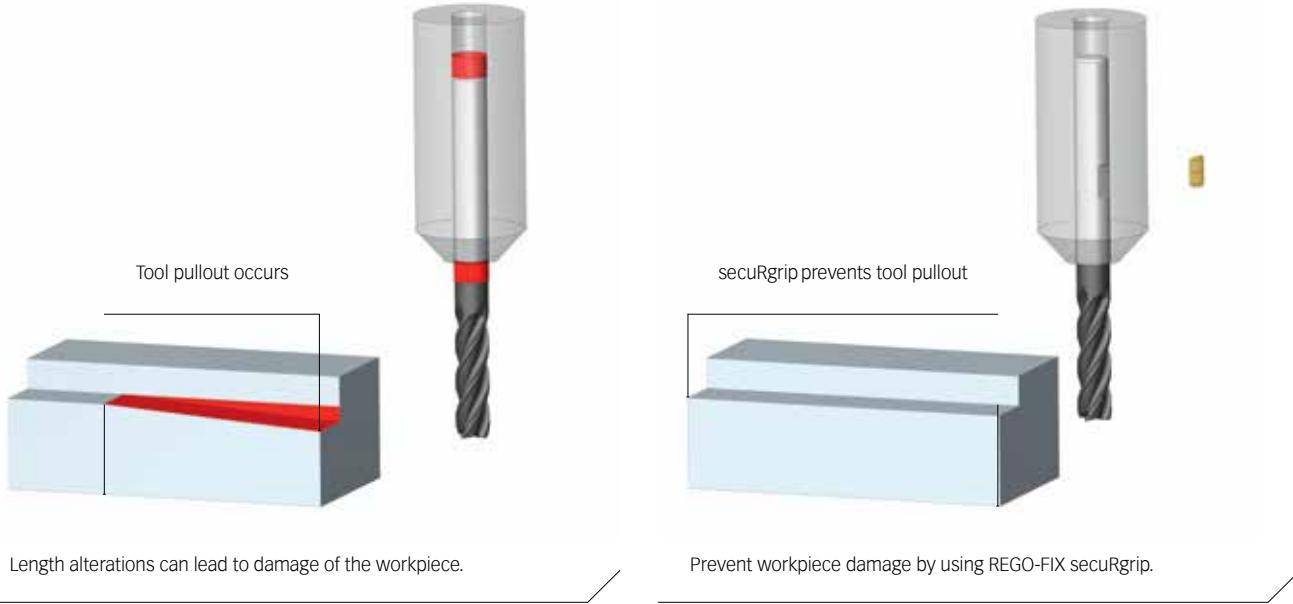

PG secuRgrip® is available for all standard tools with Weldon flat (10 – 25.4 mm), without additional modifications.

Increase productivity  
through process reliability.

# Safe machining even for difficult-to-handle workpieces

**Full protection where you need it** The secuRgrip threaded insert is designed to fit in any tool with a Weldon flat. This way you can use the tool of your choice. In combination with our PG secuRgrip collet, we offer the ultimate tool pullout protection at a competitive price. Avoiding length alterations caused by tool pullout results in improved process reliability and ultimately improves your overall machining productivity. Our secuRgrip solution is available for PG 15, PG 25 and PG 32 – just the right sizes when it comes to rough machining.

#### Key Advantages

- // No additional costs for replacing damaged tools, thanks to PG secuRgrip
- // No modification of the tool shank is required
- // Extra protection for worry-free machining, especially with expensive work pieces

## All-new Heavy Duty secuRgrip Toolholders

**HD-SG PG Holders** New Heavy Duty secuRgrip toolholders are up to two times more rigid than standard holders. And, they include secuRgrip design for 100% protection against tool pullout.

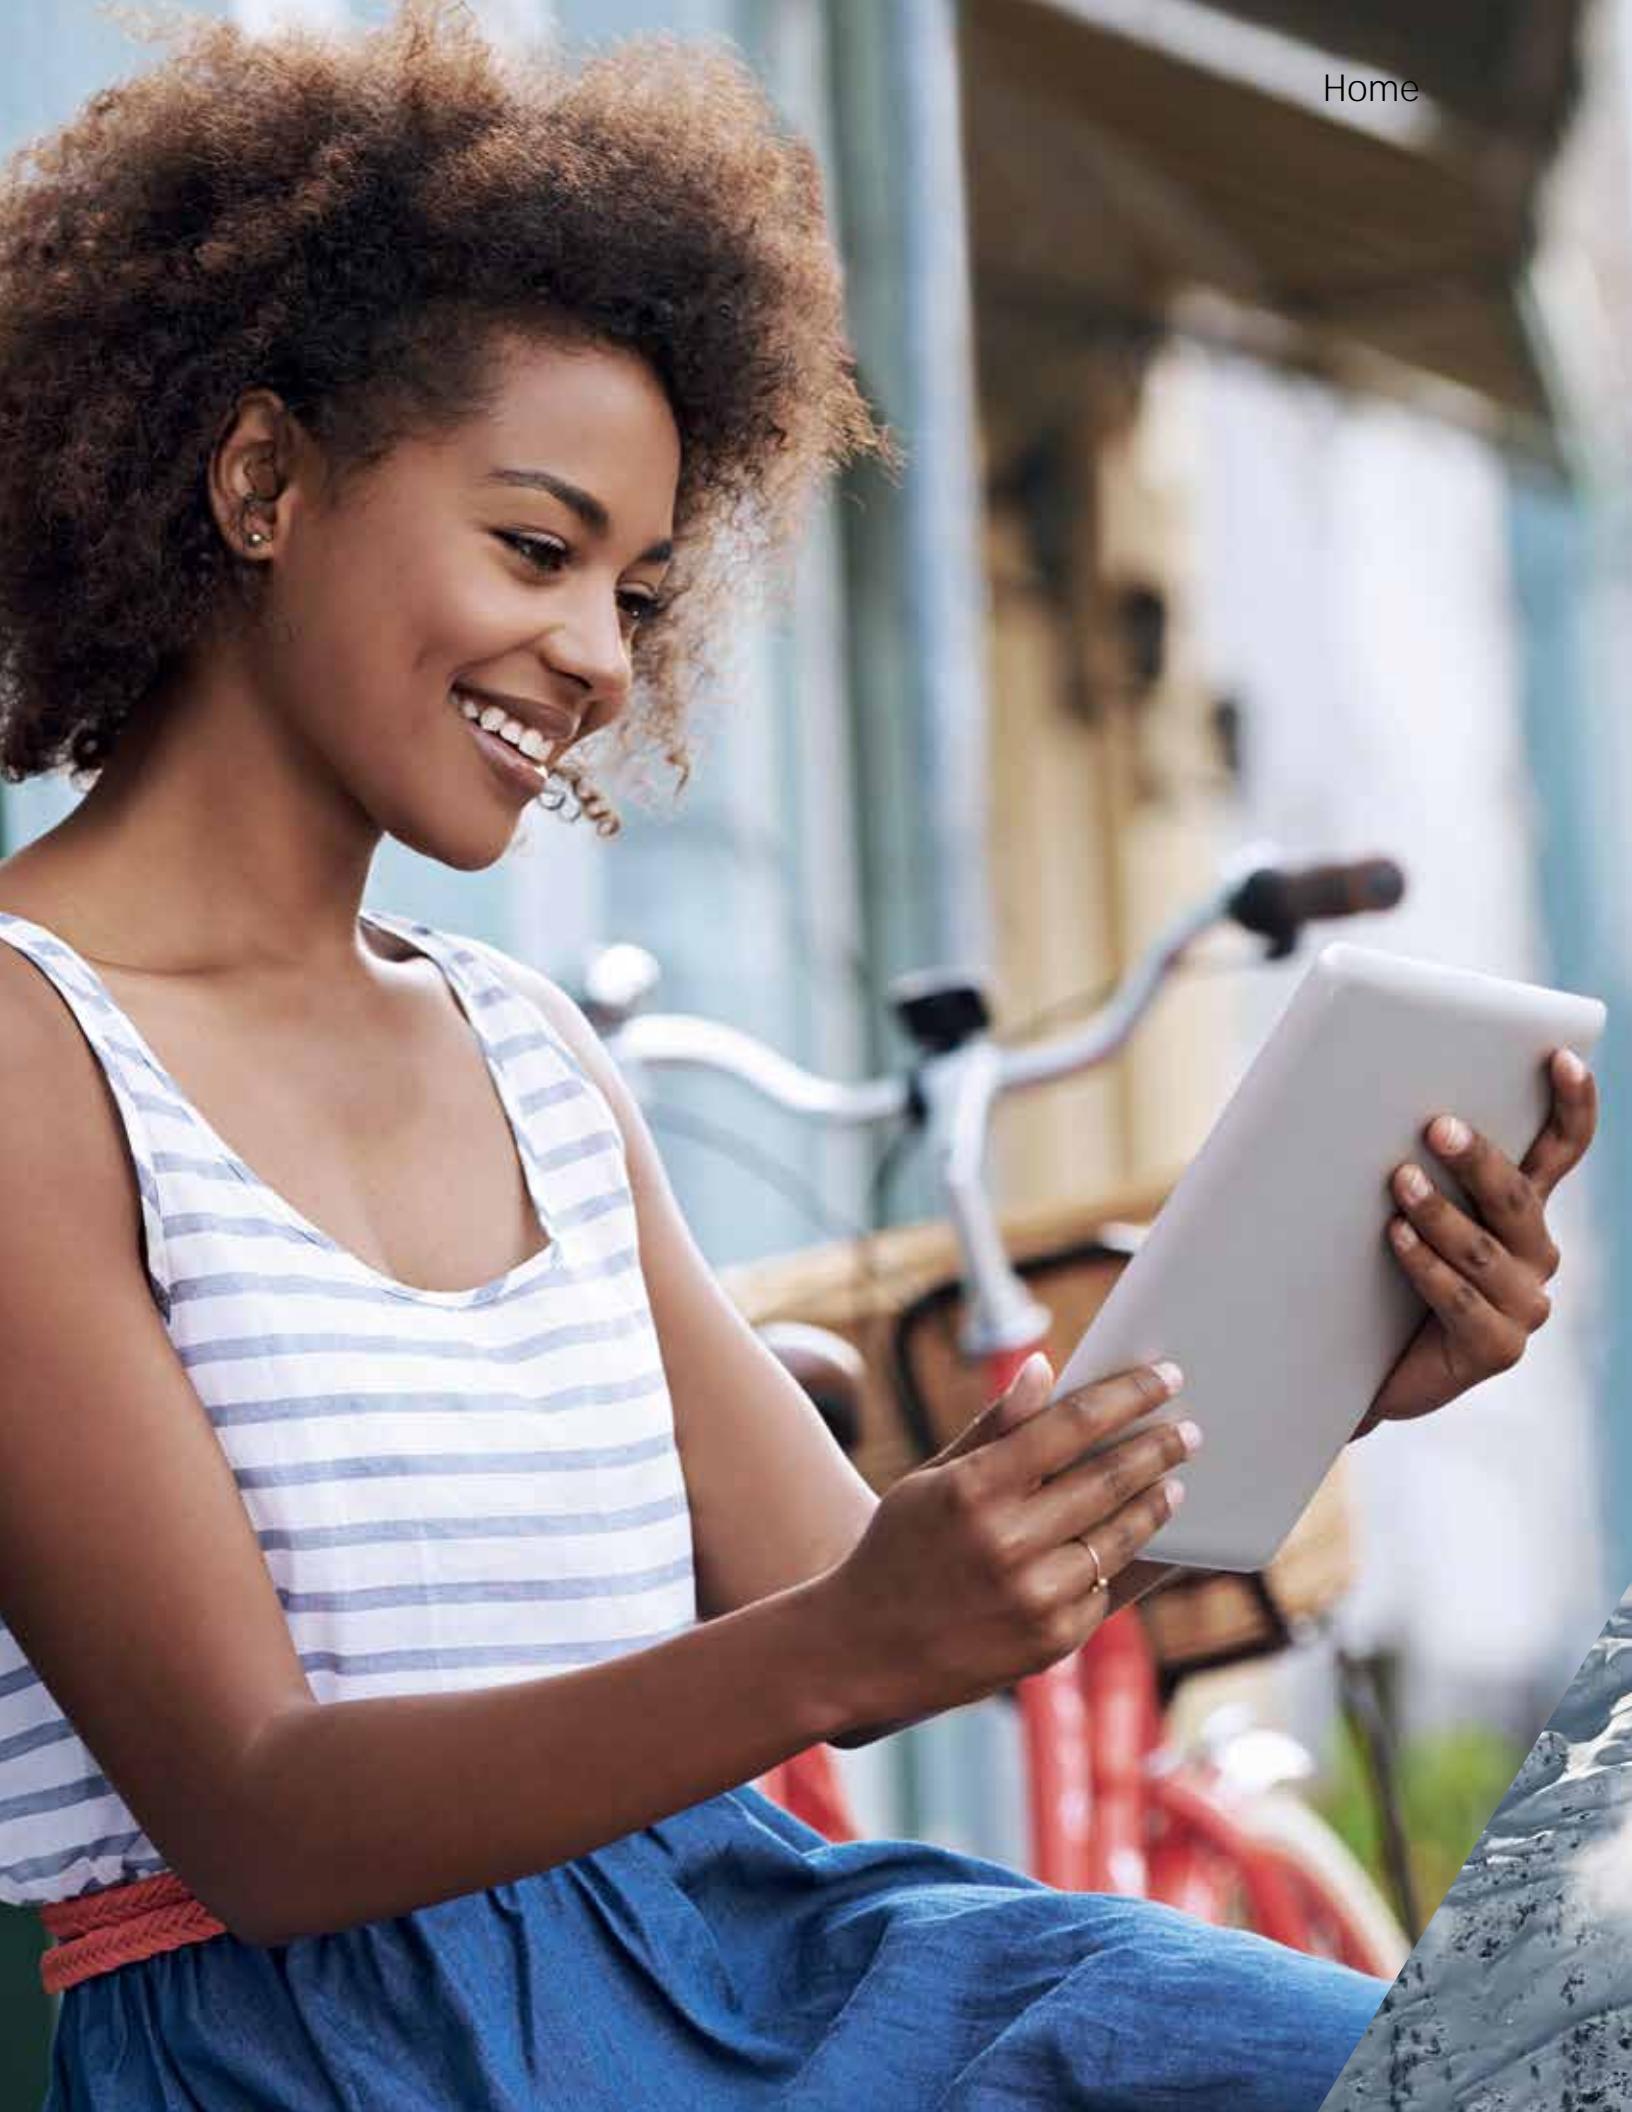

#### Features

- // Includes secuRgrip design to prevent pullout
- // Most designs retain the use of balance rings
- // Fits existing powRgrip clamping units

#### Key Advantages

- // Up to 2 times more rigid than standard holders
- // Increases feed rates to maximize tooling efficiency
- // Better surface finish with less deflection

A young woman with curly hair is smiling while holding a white tablet computer. She is wearing a striped tank top and blue jeans. In the background, there is a bicycle and a building. The word "Home" is in the top right corner.

# Minimize runout – boost productivity

**Experience outstanding quality** We at REGO-FIX know how to minimize your runout and boost your productivity. This is why we designed our powRgrip® toolholders to fulfill diverse criteria all crucial for achieving machining excellence.

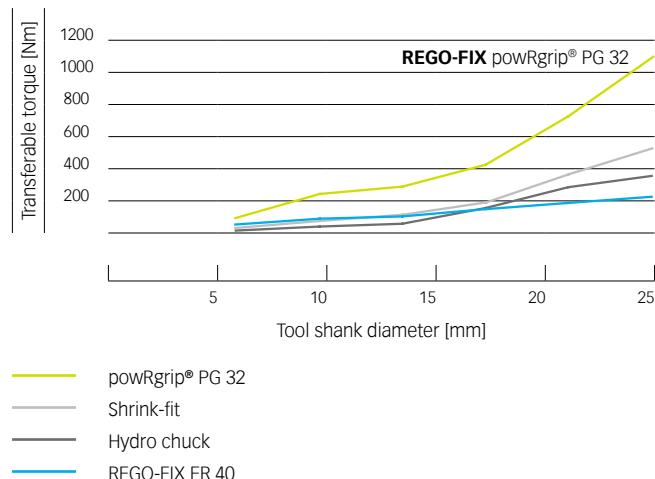

The outstanding design paired with our experienced engineering make the powRgrip products one of our most powerful toolholding options. Our PG clamping collets tout a solid collet TIR of down to 1 µm, leading to a total system runout of max. TIR of 3 µm. Further increases in machining productivity are possible by incorporating our matching items.

The PG toolholder and collet together make the PG System a high-quality and high-precision option for challenging machining applications. What you see is what you get: all our products bear the REGO-FIX triangle – our seal for outstanding Swiss quality.

**True power** A competitor comparison indicates that the transferable torque with powRgrip is more than twice as high as the same tool shank diameter clamped with a shrink-fit method. This results in powRgrip being the ultimate toolholding system for HPC and HSC cutting.

## Transferable torque of the powRgrip® System

Measured transferable torque per shank diameter / Source: In-house testing

### Swiss quality standard

Our products marked Swiss made are manufactured at our headquarters in Tenniken, Switzerland.

# CAT steep taper toolholders

Universally suitable for different machining applications.

DIN 69871 / DIN ISO 7388-1

## Features and benefits

### Total system runout TIR $\leq 0.0001"$ (3 $\mu\text{m}$ )

Our holistic system consists of a powRgrip® toolholder and collet. All components together ensure best runout and accuracy.

### Toolholder runout TIR $\leq 1 \mu\text{m}$

Measured from collet cavity to outer taper.

### Taper accuracy AT3

Better spindle-to-holder fit and accuracy.

### Surface finish max. Ra 0.25

Achieve high clamping force and high transferable torque.

### Balancing

100 % balanced to G 2.5 @ 22,000 rpm.

### Balancing in XL toolholders

100 % balanced to G 2.5 @ 5,000 rpm.

### Hi-Q® balancing system

Ready to accept Hi-Q® balancing rings which allow for the offset of the imbalance introduced by the cutting tool up to 80,000 rpm depending on the balancing rings used. All toolholders with the additional type information "H" in the part number are designed for balancing rings.

### Vibration dampening

Our holders offer good vibration dampening to sustain a high surface finish and can help prevent chatter.

### ID chip hole

In accordance with DIN 69873 for 10 mm diameter.

Information

## CAT/PG and CAT/PG XL toolholders

### **Applications**

These toolholders are designed for CNC-machining centers with an automatic tool changer. They are universally suitable for different machining applications. Their vibration dampening reduces spindle wear and extends tool life.

### **Balancing**

REGO-FIX CAT/PG toolholders are balanced to G 2.5 @ 22,000 rpm. Type H toolholders are ready to accept Hi-Q® balancing rings which allow precision balancing of the system including cutting tool up to 80,000 rpm depending on the balancing rings used.

### **CAT / PG XL available**

Due to their good vibration dampening characteristics, CAT / PG XL holders are ideally suited in all machining processes where the standard length toolholders cannot be used. All REGO-FIX XL toolholders are balanced to G 2.5 @ 5,000 rpm.

*For more details on our XL toolholders, please refer to page 10.*

### **Cooling options**

PG standard collets for tools with an internal coolant supply (metallic sealed).

Coolant flush collets PG-CF for peripheral cooling.

### **Matched tooling system for best fit**

For highest precision and best results the entire machining system counts. Therefore REGO-FIX components are carefully matched for optimum fit and accuracy. This guarantees the best runout and balance.

*For the influence of runout on tool life, please refer to page 3.*

# CAT+ REGO PLUS dual contact toolholders

**Certified** The BIG PLUS SYSTEM – licensed by BIG Daishowa – is manufactured at REGO-FIX in Switzerland under license according to BIG PLUS specifications.

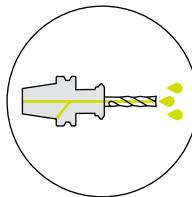

## Key advantages

Higher toolholder stiffness due to taper (AT1) and face contact.

Total system runout TIR  $\leq 3 \mu\text{m}$  at 3x D.

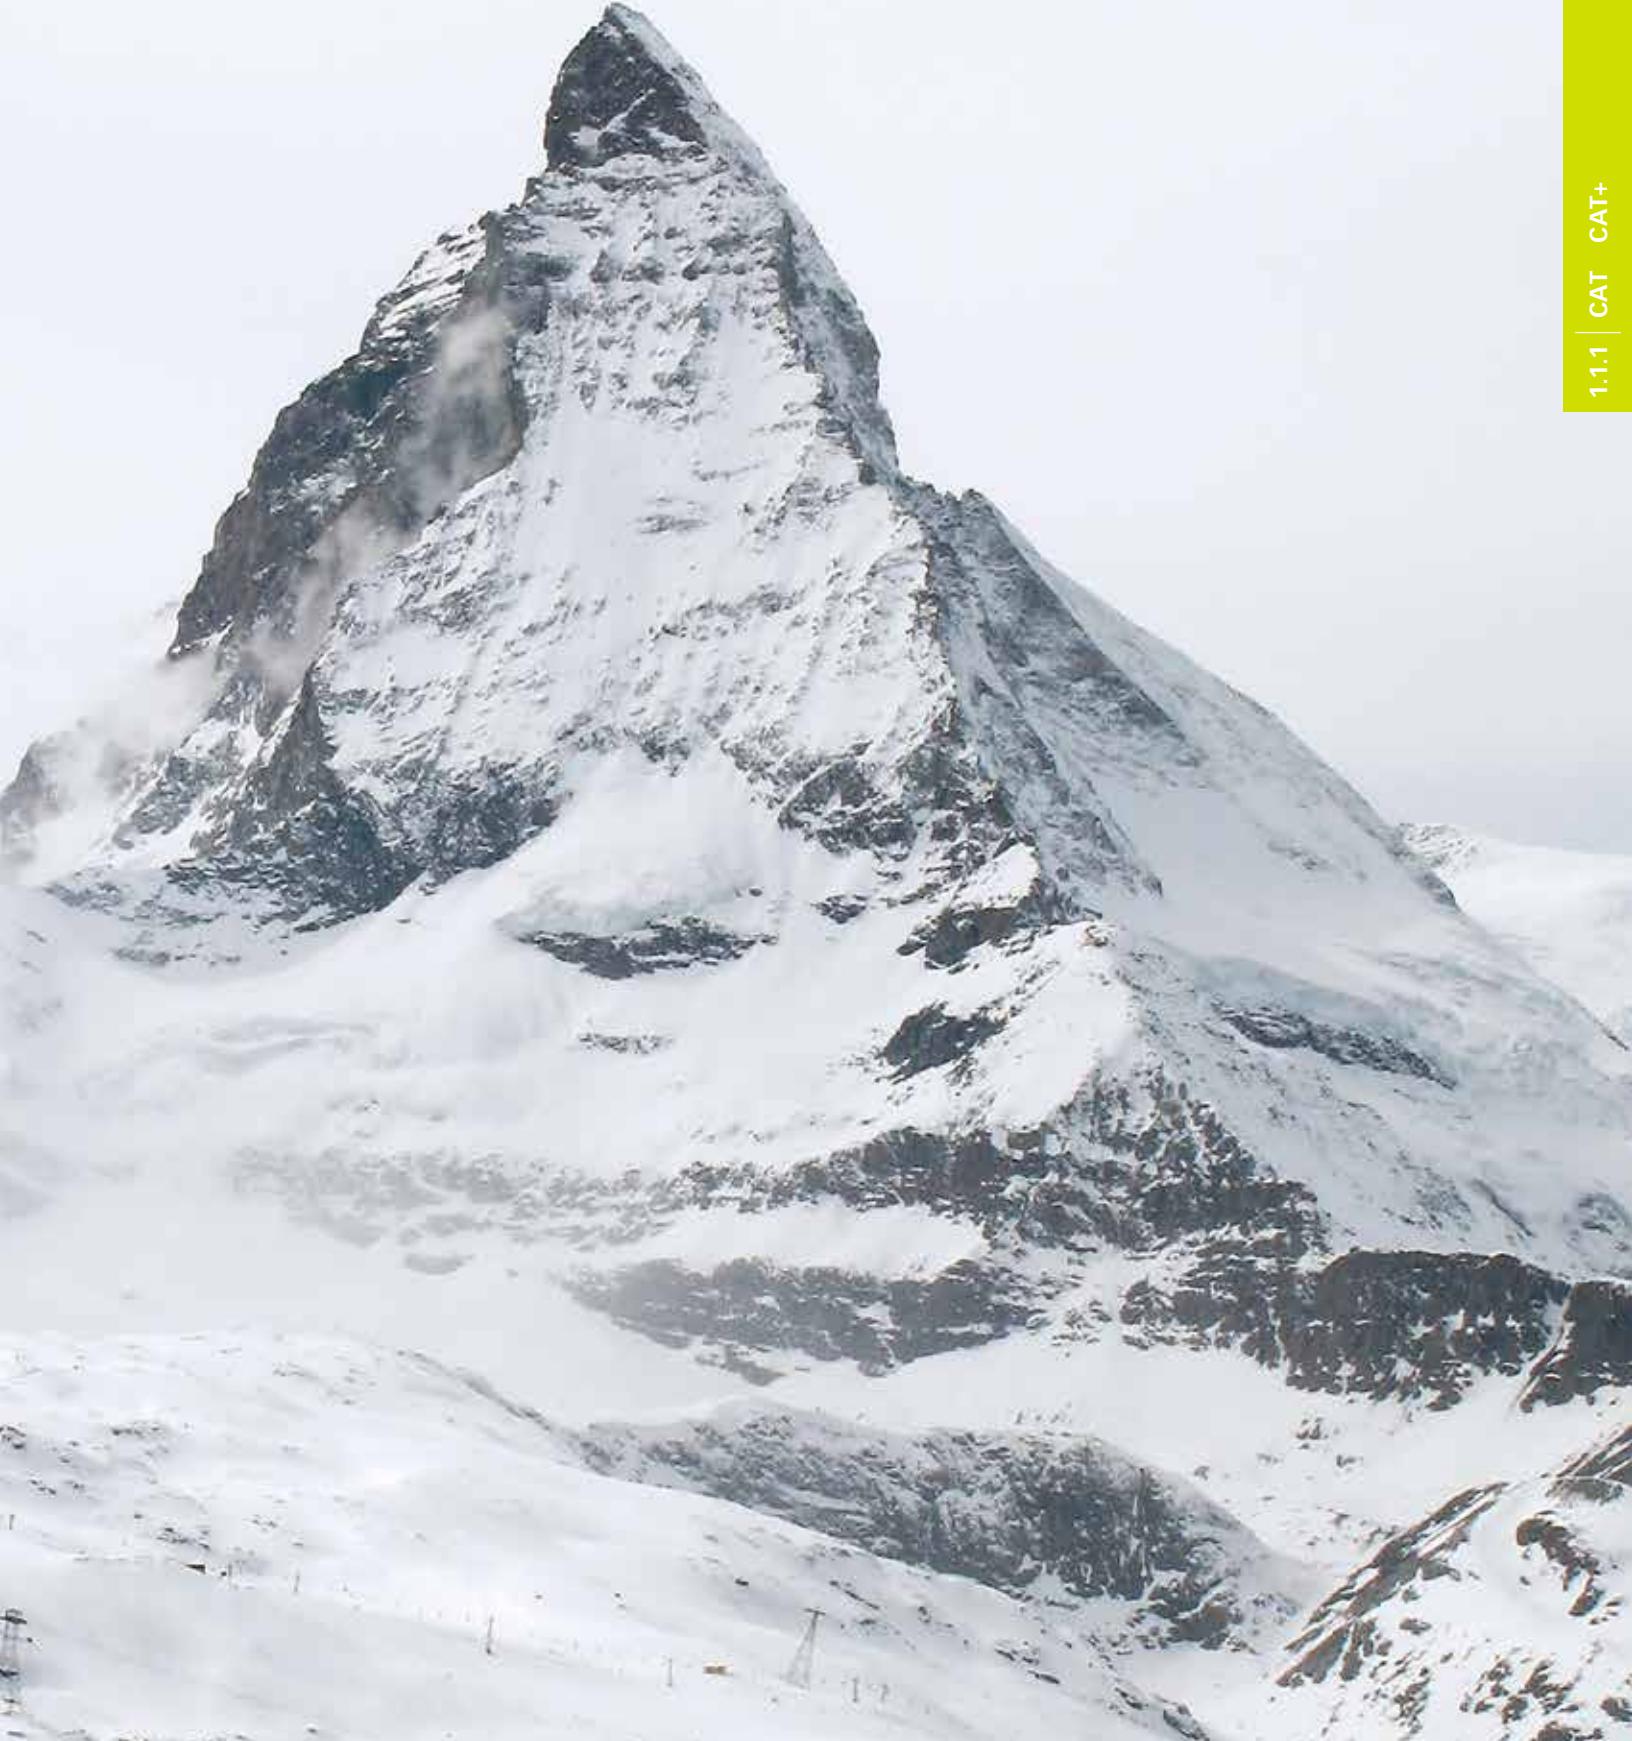

Form AD+B as standard configuration.

# SK steep taper toolholders

Universally suitable for a variety of machining applications.

DIN 69871 / DIN ISO 7388-1

## Features and benefits

### Total system runout TIR ≤ 0.0001" (3 µm)

Our holistic system consists of a powRgrip® toolholder and collet. All components together ensure best runout and accuracy.

### Toolholder runout TIR ≤ 1 µm

Measured from collet cavity to outer taper.

### Taper accuracy AT3

Better spindle-to-holder fit and accuracy.

### Surface finish max. Ra 0.25

Achieve high clamping force and high transferable torque.

### Balancing

100 % balanced to G 2.5 @ 22,000 rpm.

### Balancing in XL toolholders

100 % balanced to G 2.5 @ 5,000 rpm.

### Hi-Q® balancing system

Ready to accept Hi-Q® balancing rings which allow for the offset of the imbalance introduced by the cutting tool up to 80,000 rpm depending on the balancing rings used. All toolholders with the additional type information "H" in the part number are designed for balancing rings.

### Vibration dampening

Our holders offer good vibration dampening to sustain a high surface finish and can help prevent chatter.

### ID chip hole

In accordance with DIN 69873 for 10 mm diameter.

Information

## SK/PG and SK/PG XL toolholders

### Applications

These toolholders are designed for CNC-machining centers with an automatic tool changer. They are universally suitable for different machining applications. Their vibration dampening reduces spindle wear and extends tool life.

### Balancing

REGO-FIX SK/PG toolholders are balanced to G 2.5 @ 22,000 rpm. Type H toolholders are ready to accept Hi-Q® balancing rings which allow precision balancing of the system including cutting tool up to 80,000 rpm depending on the balancing rings used.

### SK / PG XL available

Due to their good vibration dampening characteristics, SK / PG XL holders are ideally suited in all machining processes where the standard length toolholders cannot be used. All REGO-FIX XL toolholders are balanced to G 2.5 @ 5,000 rpm.

*For more details on our XL toolholders, please refer to page 10.*

### Cooling options

PG standard collets for tools with an internal coolant supply (metallic sealed).

Coolant flush collets PG-CF for peripheral cooling.

### Matched tooling system for best fit

For highest precision and best results the entire machining system counts. Therefore REGO-FIX components are carefully matched for optimum fit and accuracy. This guarantees the best runout and balance.

*For the influence of runout on tool life, please refer to page 3.*

# BT steep taper toolholders

Universally suitable for different machining applications, the BT interface toolholders cater to different machining needs.

MAS 403 / JIS B 6339 / DIN ISO 7388-2

## Features and benefits

### **Total system runout TIR ≤ 0.0001" (3 µm)**

Our holistic system consists of a powRgrip® toolholder and collet. All components together ensure best runout and accuracy.

### **Toolholder runout TIR ≤ 1 µm**

Measured from collet cavity to outer taper.

### **Taper accuracy AT3**

Better spindle-to-holder fit and accuracy.

### **Surface finish max. Ra 0.25**

Achieve high clamping force and high transferable torque.

### **Balancing**

100 % balanced to G 2.5 @ 22,000 rpm.

### **Balancing in XL toolholders**

100 % balanced to G 2.5 @ 5,000 rpm.

### **Hi-Q® balancing system**

Ready to accept Hi-Q® balancing rings which allow for the offset of the imbalance introduced by the cutting tool up to 80,000 rpm depending on the balancing rings used. All toolholders with the additional type information "H" in the part number are designed for balancing rings.

### **Vibration dampening**

Our holders offer good vibration dampening to sustain a high surface finish and can help prevent chatter.

### **ID chip hole**

In accordance with DIN 69873 for 10 mm diameter.

Information

## BT / PG and BT / PG XL toolholders

### **Applications**

These toolholders are designed for CNC-machining centers with an automatic tool changer. They are universally suitable for different machining applications. Their vibration dampening reduces spindle wear and extends tool life.

### **Balancing**

REGO-FIX BT / PG toolholders are balanced to G 2.5 @ 22,000 rpm. Type H toolholders are ready to accept Hi-Q® balancing rings which allow precision balancing of the system including cutting tool up to 80,000 rpm depending on the balancing rings used.

### **BT / PG XL available**

Due to their good vibration dampening characteristics, BT / PG XL holders are ideally suited in all machining processes where the standard length toolholders cannot be used. All REGO-FIX XL toolholders are balanced to G 2.5 @ 5,000 rpm.  
*For more details on our XL toolholders, please refer to page 10.*

### **Cooling options**

PG standard collets for tools with an internal coolant supply (metallic sealed).  
Coolant flush collets PG-CF for peripheral cooling.

### **Matched tooling system for best fit**

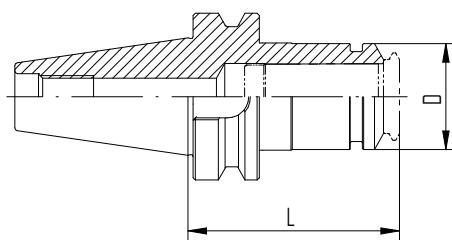

For highest precision and best results the entire machining system counts. Therefore REGO-FIX components are carefully matched for optimum fit and accuracy. This guarantees the best runout and balance.

*For the influence of runout on tool life, please refer to page 3.*

## Information

### BT-OM / PG toolholders without drive slots

#### Applications

This special toolholder without drive slots is designed for use on HAAS and HURCO CNC-machining centers, for High Speed Cutting (HSC) and High Performance Cutting (HPC). Use up to the max. power limit of the processing machine.

The anti-vibration characteristics of the BT-OM / PG toolholder reduce the wear of spindle and tool.

#### Balancing

REGO-FIX BT-OM / PG toolholders are balanced to G 2.5 @ 22,000 rpm. Type H toolholders are compatible with Hi-Q® balancing rings which allow precision balancing of the entire system including cutting tool up to 80,000 rpm depending on the balancing rings used.

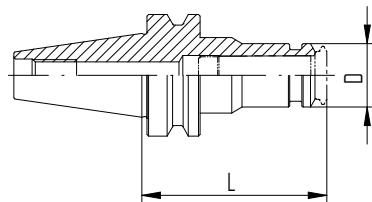

#### Cooling options

PG standard collets for tools with an internal coolant supply (metallic sealed). Coolant flush collets PG-CF for peripheral cooling.

#### Matched tooling system for best fit

For highest precision and best results the entire machining system counts. Therefore REGO-FIX components are carefully matched for optimum fit and accuracy. This guarantees the best runout and balance.

For the influence of runout on tool life, please refer to page 3.

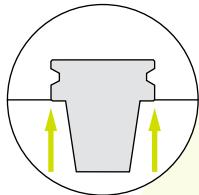

BT-OM / PG

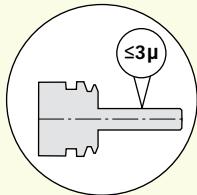

# BT+ REGO PLUS dual contact toolholders

**Certified** The BIG PLUS SYSTEM – licensed by BIG Daishowa – is manufactured at REGO-FIX in Switzerland under license according to BIG PLUS specifications.

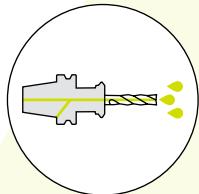

## Key advantages

Higher toolholder stiffness due to taper (AT1) and face contact.

Total system runout  
TIR  $\leq 3 \mu\text{m}$  at  $3 \times D$ .

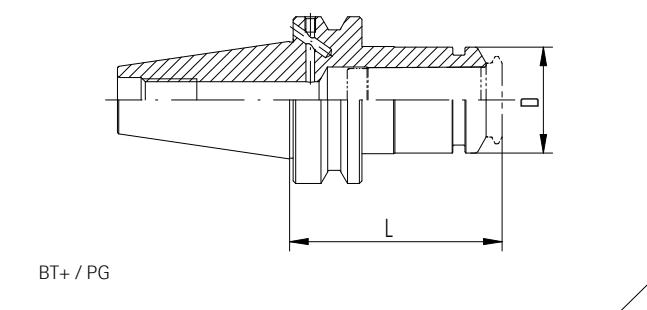

Form AD+B as standard configuration.

# HSK toolholders

Designed for rotating applications, all our HSK toolholders are suited for high-speed applications where consistent performance is key.

DIN 69893 / ISO 12164

## Features and benefits

### Total system runout TIR $\leq 0.0001"$ (3 µm)

Our holistic system consists of a powRgrip® toolholder and collet. All components together ensure best runout and accuracy.

### Toolholder runout TIR $\leq 1 \mu\text{m}$

Measured from collet cavity to outer taper.

### Surface finish max. Ra 0.25

Achieve high clamping force and high transferable torque.

### Hi-Q® balancing system

REGO-FIX HSK / PG toolholders are balanced to G 2.5 @ 25,000 rpm. Type H toolholders are ready to accept Hi-Q® balancing rings which allow precision-balancing of the system including cutting tool up to 80,000 rpm depending on the balancing rings used.

### Balancing in XL toolholders

100 % balanced to G 2.5 @ 5,000 rpm.

### Vibration dampening

Our holders offer a good vibration dampening to sustain a high surface finish and can prevent cutting force alterations.

### Matched tooling system for best fit

For highest precision and best results the entire machining system counts. Therefore our components are carefully matched for optimum fit and accuracy. This guarantees the best runout and balance.

### ID chip hole (only HSK form A+B)

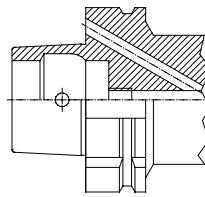

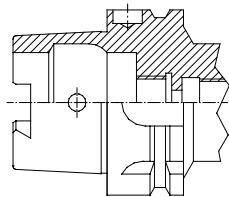

In accordance with DIN 69873 for 10 mm diameter.

### Expert advice

For all HSK-A and HSK-E form toolholders a range of coolant tubes (KSR) is available.

For KSR part numbers please refer to page 85.

## Form A\*

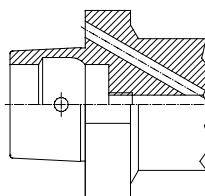

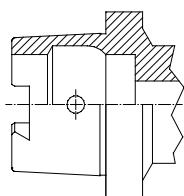

- // Standard type for machining centers and milling machines
- // For automatic tool change
- // Coolant supply through center via coolant tube
- // Drive keys at the end of HSK taper
- // Hole for data carrier DIN STD 69873 in the flange

\* Also usable in form C applications with side hole for manual tool change.

## Form B

- // For machining centers, milling and turning machines
- // With enlarged flange size for higher radial rigidity
- // For automatic tool change
- // Coolant supply through the flange
- // Drive keys at the flange
- // Hole for data carrier DIN STD 69873 at the flange

Available on request.

## Form C

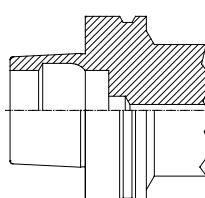

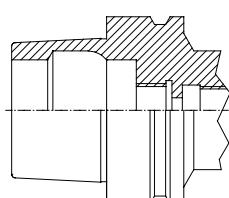

- // For transfer lines, special machines and modular tooling systems
- // For manual tool change
- // Drive keys at the end of HSK taper

Available on request.

## Form D

- // For special machines
- // With enlarged flange size for higher radial rigidity
- // For manual tool change
- // Coolant supply through the flange
- // Drive keys at the flange

Available on request.

## Form E

- // For high-speed applications
- // For automatic tool change
- // Coolant supply through center via coolant tube
- // Without any drive keys for absolute symmetry

## Form F

- // For high-speed applications
- // For automatic tool change
- // With enlarged flange size for higher radial rigidity
- // Without any drive keys for absolute symmetry

# REGO-FIX CAPTO toolholders

These self-centering and balanced toolholders enable high-torque transmission and show a high-bending strength.

ISO 12164

## Features and benefits

### Total system runout TIR $\leq 0.0001"$ (3 µm)

Our holistic system consists of a powRgrip® toolholder and collet. All components together ensure best runout and accuracy.

### Toolholder runout TIR $\leq 1 \mu\text{m}$

Measured from collet cavity to outer taper.

### Surface finish max. Ra 0.25

Achieve high clamping force and high transferable torque.

### Balancing

100 % balanced to G 2.5 @ 25,000 rpm.

### Balancing in XL toolholders

100 % balanced to G 2.5 @ 5,000 rpm.

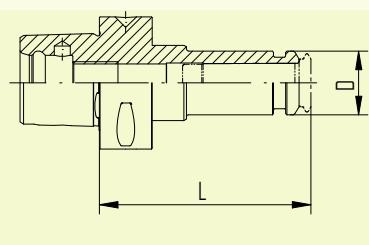

### Hi-Q® balancing system

Ready to accept Hi-Q® balancing rings which allow for the offset of the imbalance introduced by the cutting tool up to 80,000 rpm depending on the balancing rings used. All toolholders with the additional type information "H" in the part number are designed for balancing rings.

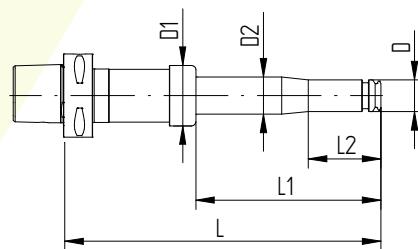

### Vibration dampening

Our holders offer good vibration dampening to sustain a high surface finish and can prevent cutting force alterations.

**Certified** REGO-FIX CAPTO – licensed by Sandvik Coromant – is manufactured at REGO-FIX Switzerland under license according to CAPTO specifications.

# Cylindrical shank toolholders CYL

CYL

## Features and benefits

**Total system runout TIR  $\leq 0.0001"$  (3  $\mu\text{m}$ )**

Our holistic system consists of a powRgrip<sup>®</sup> toolholder and collet. All components together ensure best runout and accuracy.

**Toolholder runout TIR  $\leq 1 \mu\text{m}$**

Measured from collet cavity to outer shank.

**Surface finish max. Ra 0.25**

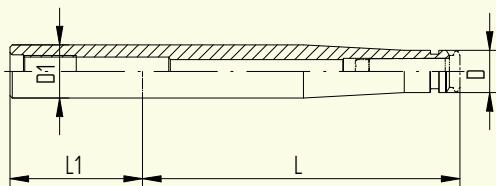

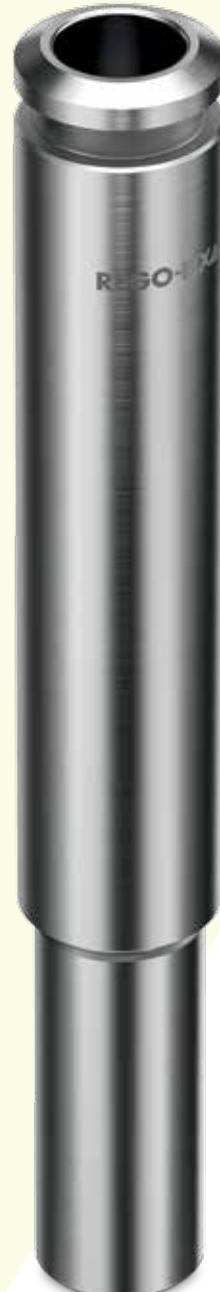

Achieve high clamping force and high transferable torque.

**Minimal outside dimensions**

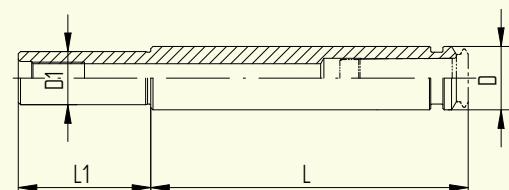

Slim design provides more machining flexibility.

**Extra length possible**

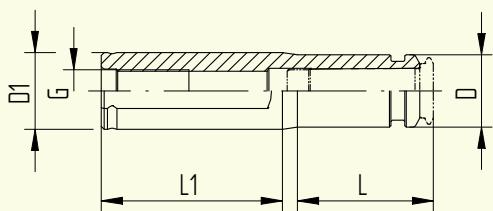

CYL 10/PG and CYL 20/PG can be used as extensions.

# ISO 20 toolholder

**Applications** The REGO-FIX ISO 20 toolholders are designed to work with the HAAS Office Mill. To utilize the full potential of your machine, use the REGO-FIX brand of holders and collets to see the difference quality can achieve in your machining operations.

**Balancing** 100 % balanced to G 2.5 @ 40,000 rpm.

**Matched tooling system for best fit** For highest precision and best results the whole system counts. Therefore REGO-FIX components are carefully matched for optimum fit and accuracy. This guarantees the best runout and balance.

# Form-fit for 100 % pullout protection

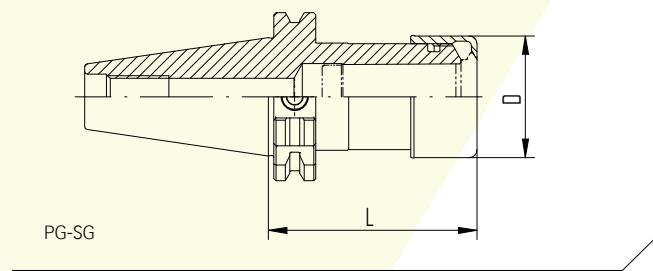

**Form and force-fitting clamping system** Tools and collets are 100% secured against tool pull-out, making secuRgrip your safety net for successful machining. In high performance cutting (HPC), the tool can pull out of the clamping system during the milling operation and damage the workpiece. We developed the secuRgrip locking system for operators who want to avoid any pull-out.

**Process security** Optimize your machining productivity by securing your processes.

Our secuRgrip solution fits all standard tools with endmill flat according to DIN 6535-HB (metric). This means, that no special tool shank form is required.

#### secuRgrip® system elements

- // secuRgrip threaded insert  
For all shanks with Weldon surface
- // secuRgrip toolholder with thread
- // secuRgrip PG 25-SG or PG 32-SG collet
- // secuRgrip safety nut

#### Expert advice

Freewheel wrench head, grip bar or torque wrench are required to safely fasten nut.

# All-new Heavy Duty secuRgrip® Toolholders

**HD-SG PG Holders** New Heavy Duty secuRgrip toolholders are up to two times more rigid than standard holders. And, they include secuRgrip design for 100% protection against tool pullout.

## Features

- // Includes secuRgrip design to prevent pullout
- // Most designs retain the use of balance rings
- // Fits existing powRgrip clamping units

## Key Advantages

- // Up to 2 times more rigid than standard holders
- // Increases feed rates to maximize tooling efficiency
- // Better surface finish with less deflection

# PG thread-cutting solutions

## CYL SSY / HSK-A SSY Softsynchro® tapping holder

- // With minimum length compensation
- // Eliminates small synchronization errors of machines

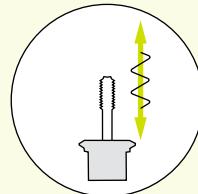

### Applications

- // Machines for direct thread cutting
- // For all tapping tools with h9 shanks
- // The turning movement of the spindles can be offset with the feed axis and thus synchronized
- // Synchronization errors are created by the dynamics of the spindle and linear drives. The tapping holder is equipped with the minimum length compensation and compensates the synchronization errors
- // Depending on the application, the service life for the customer can be increased by up to 150 %
- // Guides coolant with up to 50 bar / 725 PSI of pressure to the tap, without compromising length compensation

## CYL GSF tapping holder

- // With length compensation
- // Used on machines in which the feed movement is not synchronized with the thread pitch during processing

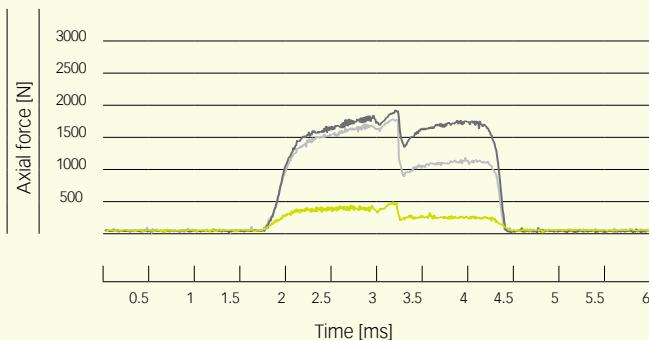

### Applications

- // For machines without a tapping option
- // Ensures the compensation of differences between the thread pitch and spindle feed
- // Features a pressure-point mechanism
- // Safe tap cutting
- // Uniform, reproducible thread depths
- // Guides coolant with up to 50 bar / 725 PSI of pressure to the tap, without compromising length compensation
- // Universal use thanks to its compact design and low gauge length

## Comparative axial force testing

Occurring axial forces with thread forms M10 in St37. Speed 500 rpm.

Source: In-house testing

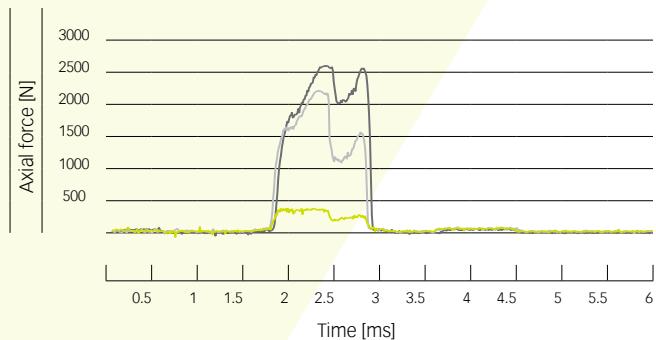

**Summary** The axial forces increase with increasing speed. With a rigid toolholder, the forces occurring when forming threads are considerably higher than with the Softsynchro® tapping holder. This allows for the optimum use of the synchronous spindle with the best possible service life and thread surface quality.

## Comparative axial force testing

Occurring axial forces with thread forms M10 in St37. Speed 2,000 rpm.

Source: In-house testing

- REGO-FIX Softsynchro® tapping holders
- Competitor synchronous toolholder
- Rigid synchronous toolholder

# The most powerful collets yet

Our holistic system approach ensures powerful clamping with a total system runout – holder and collet combined – of less than three microns.

**Experience the quality of the triangle** The outstanding design paired with our experienced engineering make the PG products our most powerful tool-clamping options. What you see is what you get: all our PG products bear the REGO-FIX triangle – our seal for outstanding quality and true Swissness.

## Key advantages

### Rely on the powerful

#### **Total system runout TIR $\leq 0.0001»$ (3 µm)**

Our holistic system consists of a powRgrip® toolholder and collet. All components together ensure best runout and accuracy.

#### **Accurate length adjustment repeatability $< 0.0004»$ (10 µm)**

Thanks to the integrated adjustment screw.

#### **Clamping of all h6 tool shanks**

Cylindrical, WELDON, Whistle-Notch.

#### **Clamping of all shank materials**

Solid carbide and HSS tool shanks.

#### **Clamping diameters**

0.2 to 25.4 mm.

#### **Swiss quality standard**

Our products marked Swiss made are manufactured at our headquarters in Tenniken, Switzerland.

# PG collets for tapping PG-TAP

Manufactured with a form-fitting internal square, the PG-TAP collets successfully prevent the tap from twisting.

## Key features

### Tapping collets without axial compensation

#### Swiss quality

Made in Switzerland to ISO 9001/ISO 14001.

#### Marking

Type and size are marked on the collets to reduce collet selection errors.

#### Traceability

Lot number marking on all products for traceability through the entire manufacturing process.

#### Coolant through tools

Metallic sealed for coolant through tools.

#### Internal square for tap shanks and length adjustment

Internal square for tight grip, integrated length adjustment screw, accepts h9 tool shanks.

**Directions for use** The PG-TAP tapping collets are compatible with DIN standard taps.

The REGO-FIX powRgrip® tapping collets are manufactured with an internal square. They are intended for use on CNC machines that have synchronized machine spindle speed and feed rate. Machines that have such rigid tapping capabilities require only minimal compensation.

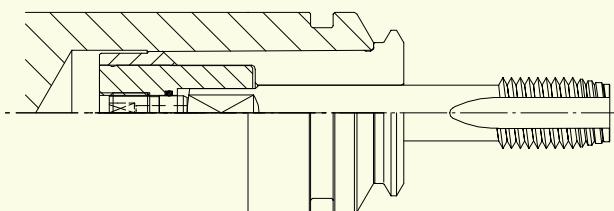

We recommend the use of our SSY Softsynchro® tapping holders. They compensate minimal synchronizing differences of CNC machines.

*Please refer to page 60 for additional information on REGO-FIX tapping holders.*

*For machines without tapping option we recommend the use of our axial compensating GSF tapping holders. Please refer to page 60 for more information. For additional technical information and dimensions of taps, please refer to page 93.*

## Expert advice

Clamp h9-tolerance tool shanks only.  
Never clamp tapping collet without a tool or you will risk to damage the collet.

**Precise tool adusting** The powRgrip® presetting tool accommodates the powRgrip collet and is inserted into the collet holder. The presetting tool has an adjustment wheel for precise tool adjustments.

VEW

Length-presetting tool VEW

VEW

Length VEW

Total length

**How it works**

- // Insert the length-presetting tool VEW into the powRgrip toolholder
- // Insert the powRgrip collet into the length presetting tool
- // Insert the cutting tool into the powRgrip collet
- // Adjust the tool length by turning the adjustment wheel
- // Measure the total length of the cutting tool and subtract the length of the VEW (approx. 100 mm) from the total length
- // Remove the presetting tool
- // Clamp collet and cutting tool into the powRgrip toolholder with the powRgrip clamping unit
