## **RAC Dash Cam PocketGPSWorld Speed Camera Database Update Instructions**

The speed camera database update software is available to update RAC Dash Cameras with an enabled speed camera database fitted. Please see accompanying – speed camera database update file entitled edogdata.dat.

The software is available only for the purposes of updating the database on individual cameras and cannot be used for any other purpose and that ProofCam reserve the right to make updates available from time to time, and that ProofCam may no longer make updates available at its sole discretion.

### **Instructions:**

1. Insert an SD card into your PC and make sure that it has been formatted.
2. Download the speed camera database software from the product or product resource section of [www.proofcam.com](http://www.proofcam.com) to your PC and save it onto your PC.
3. Transfer the software to the blank SD card, we suggest either by dragging it to your SD card, or by using the "copy and paste" function.
4. Make sure your RAC Dash Cam is turned off, and insert the SD card into the Dash Cam and turn it on.
5. If there are any on screen instructions on your Dash Cam, please follow them. If there are no instructions, then the Dash Cam will automatically update and then switch off when the process has finished.
6. When the Dash Cam has switched off, remove the SD card, then re-insert it into your PC, and delete all the files and format the SD card.
7. Re-insert the SD card into your Dash Cam and the database will have been updated and ready to use.
