

## Environmental Bond

When using our environmentally friendly engineering bond (RC20B) you preserve valuable natural resources by using less energy, less water, fewer trees and emitting less greenhouse gases. RC20B paper has a 30% post-consumer recycled content and is 100% recyclable. As always, test for suitability and satisfaction per application. We believe you will be more than satisfied. So give us a call and start saving some green.

### Physical Properties

Basic Weight	20lb	Brightness	92
Caliper	4.0 mil	Moisture %	4.7
Opacity	89%	Tensile MD	24.0
Sheffield Smoothness	160	30% Recycled content	

### Features & Benefits

#### Bright White

Allows for better visual contrast of your image.

#### Xerographic Grade

Manufactured specifically for toner adherence.

#### Economical

Makes it the perfect choice at an irresistible price.

### Market Applications

When environmentally friendly engineering bond is needed RC20B can be used on large format digital and xerographic printers, plotters and copiers. As always, test for suitability and satisfaction.

### Usage Guidelines

### Operating Conditions

Environmental Bond works best in controlled operating conditions. Recommended operating conditions are: Relative Humidity...20-70% and Temperature...65-85°F

### Storage Conditions

Always store your Environmental Bond in a cool dry area. It is best to keep your storage conditions within the same guidelines as "Operating Conditions" stated above. If your storage conditions are not similar to operating conditions, we recommend that you allow the Bond to acclimate to the operating conditions before commencing the printing process.

### Media Handling Rolls:

Thruput rolls are rolled "preferred side out" unless otherwise noted on the package. This configuration should be taken into consideration when installing your media into your xerographic or digital machine. Always return unused media to its original packaging.
