Magnifiers - Illuminated

Optelec

Optelec PowerMag™ Bright White LED Handheld and Stand Magnifiers

- Standard light-emitting diode (LED) illumination
- 7750K light temperature produces a bright, clear light
- Superior German optics by Schweizer, for an accurate, sharply defined image
- Aspheric lightweight scratch-resistant acrylic magnifying lens
- Easy-slide switch eliminates flickering light
- Permanently attached hinged battery cover

Optical Handheld Magnifiers

The handheld magnifier is convenient for short-term tasks such as “spot” or single-word reading. They are small, lightweight and portable, but require good coordination to maintain the focal distance and may not be a good option when both hands are needed.

Optical Stand Magnifiers

The stand magnifier is one of the simplest devices available for reading. Stand magnifiers are made to rest directly on the page to set the magnifier at the ideal focal distance and because the magnifier rests on the reading material, the user may experience less fatigue.

Optelec PowerMag+ Handheld Magnifiers require three AAA batteries (included), and include a protective microfiber drawstring pouch and a Limited Lifetime Warranty.

Spectacles

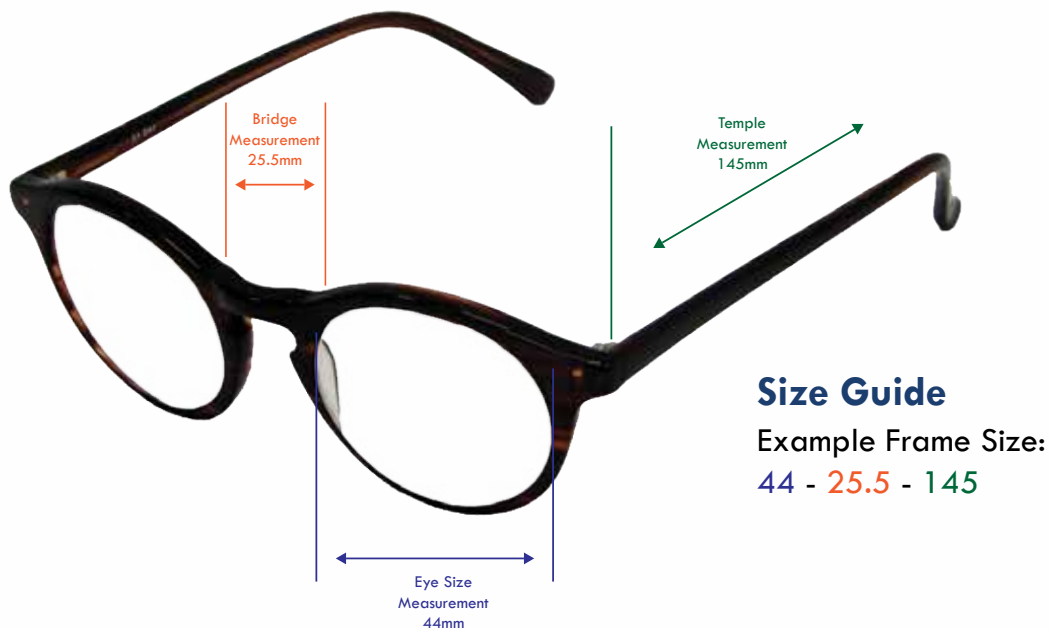

Resources

Description of Spectacles*

Prismatic: base-in prism to reduce fatigue when reading with both eyes together.

Lenticular: lens power concentrated in the center of the lens, to reduce thickness and weight.

Microscopic: strong lens for reading with one eye.

Definition of Spectacles*

Prismatic Reading Glasses are designed to be used with both eyes together. They include base-in prism to assist with convergence of the two eyes at near, thereby reducing fatigue and possible double vision when reading for long periods. Prismatic reading glasses are usually not aspheric or lenticular, and can be used up to a maximum power of about +14 D.

Microscopic Reading Glasses are designed to be used by only one eye. This option might be chosen because the other eye has very poor vision, or because the power needed exceeds +14 D. Two lens options might be considered for microscopics in higher powers. Lens thickness and weight may be reduced with a lenticular design, in which the power of the lens is limited to a circular area in the middle of the lens. A microscopic lens may be both lenticular and aspheric.

What kit is right for my practice?

We've thoughtfully developed our kits based on different practice needs. Whether you are a new eye care professional starting your practice, or a seasoned optometrist looking to diversify your optical offerings, there is a kit that is right for you!

Low Vision Starter Kit - Item No 95LVSK (Page 33)

An introduction to a wide selection of low vision products to get you going. Perfect for a new optometrist starting to grow your practice.

Professional Kit - Item No. 95PK (Page 34)

The most comprehensive kit available. Ideal if you are interested in adding some low vision offerings to your growing practice.

Schweizer Demo Kit - 58SDK (Page 35)

A selection of high-end Schweizer magnification products. Excellent for a thriving low vision practice that wants to add more optical options.

Includes all necessary tools for assessments and evaluations, conveniently packaged to move from room to room, or on house visits. Keep all your equipment in one place - no more searching through drawers, only to find loose or scratched magnifiers.

Convenient • Accessible • Easily Transported
