STEREO PHONO EQUALIZER RHQ10

Table of Contents

Specifications1
 Parts List..... 2, 3, 4
 Input Level Setting.....4, 5, 6
 Output Setting6
 PCB Assembly.....7, 8
 Wiring Diagram9, 10
 Schematic Diagram.....11, 12

Specifications

Input (Sensitivity/ Impedance).....	MM: 2.5mV/47 kohms 100pF MC: 0.3mV/100 ohms
RIAA (Accuracy).....	20-20,000Hz, ±0.1dB
Output Level	Fixed 1: 0.775V/100 ohms (Rated at 0.3mV input) Variable/Fixed 2: 0.775V/100 ohms (Rated at 0.1mV Input)
Total Harmonic Distortion (20-20kHz)..	0.005%
Signal-to-Noise Ratio (IHF A Network).....	MM: 90dB MC: 75dB
Overload (THD 0.5%, 1kHz)	MM: 30dB MC: 30dB
Crosstalk (20-20kHz)	80dB
Power Requirement.....	120V/60Hz, 220V/ 50Hz, 240V/50Hz
Power Consumption	18 watts
Dimensions (overall).....	470 (W) × 76 (H) × 332 (D) mm 18-1/2" × 3" × 13-1/16"
Weight (Net).....	6.8kg/14.96 lbs.

• Specifications and design subject to possible modification without notice.

Input Level Setting

When shipped from the factory, the unit has been preset, with four short pins, for use with MC cartridges, and appropriate standard values have been set for input impedance. (Fig. 1)

Figure 1: Condition upon Shipment from Factory

Signal lineages (A) and (B) in the above diagram are detailed in the block diagrams below.

In the event that input impedance for some MC-type cartridges depart considerably from 100 ohms, the resistance values used on PC board points R106 (for the right channel) and R105 (for the left channel) could

be replaced with resistance values appropriate for the input impedance of the cartridge you wish to use. A high-quality resistor must be used, and its quality must match that of the resistor in current use. (Fig. 2)

Figure 2

When using an MM cartridge, or an MC cartridge with a high sensitivity similar to that of an MM cartridge, pull out the short pins from PC board points J108 and J104 (for the right channel) and J107 and J103 (for the left

channel), and insert these pins respectively into points J106 and J102 (for the right channel) and J105 and J101 (for the left channel) near the rear panel. (Fig. 3)

Figure 3

Standard setting

Approx 0.3mV*/100 ohms for MC cartridges

* Consider this setting to support a range of 0.2-0.5mV.

Setting Table

PC board	Function	Factory setting MC type 0.3mV/100Ω	Dealer settings	
			Free input impedance setting for MC type	MM type
Right channel	J108	Selects MC (output)	Short pin	Open
	J106	Selects MM (output)	Open	Short pin
	J104	Selects MC (impedance)	Short pin	Open
	J102	Selects MM (Impedance)	Open	Short pin
	R106	Sets MC input impedance	100Ω	Replace

*When making settings for MM types, the usual impedance being 47kΩ, 2.5mV output (for 2-3mV range), the job can be completed by simply rearranging the short pins. There is no need to change the resistance.

PC board	Function	Factory setting MC type 0.3mV/100Ω	Dealer settings	
			Free input impedance setting for MC type	MM type
Left channel	J107	Selects MC (output)	Short pin	Open
	J105	Selects MM (output)	Open	Short pin
	J103	Selects MC (impedance)	Short pin	Open
	J101	Selects MM (Impedance)	Open	Short pin
	R105	Sets MC input impedance	100Ω	Replace

Output Setting

Two sets of output terminals are provided on the rear panel of the RHQ-10. These terminals have the following characteristics:

FIXED1 Used for output to the passive controller RHC-10 or a normal control amplifier. Output from this unit is maximum 0.775V/100Ω. In this case, the signal inside this unit does not pass through the attenuator.

VARIABLE/FIXED2 This terminal is a VARIABLE terminal when settings inside the unit are not changed. Because the attenuator on the front panel can be used to attenuate output, output from this unit can be connected directly into a power amplifier.

If the cartridge used is an MC type and output is much less than 0.3mV, settings inside this unit must be changed and this terminal becomes a FIXED2 terminal. As a FIXED2 terminal, output from this unit is fixed at 0.775V/100Ω and connected to the RHC-10 passive controller or a control amplifier. FIXED2 settings should be made by authorized Rotel dealers as follows (Fig. 4):

● Changing settings so that the VARIABLE/FIXED2 terminal can be used as a FIXED2 terminal

Two red short pins on the PC board toward the rear of the attenuator are moved from VARIABLE to FIXED2.

INSTRUCTIONS FOR SERVICE PERSONNEL

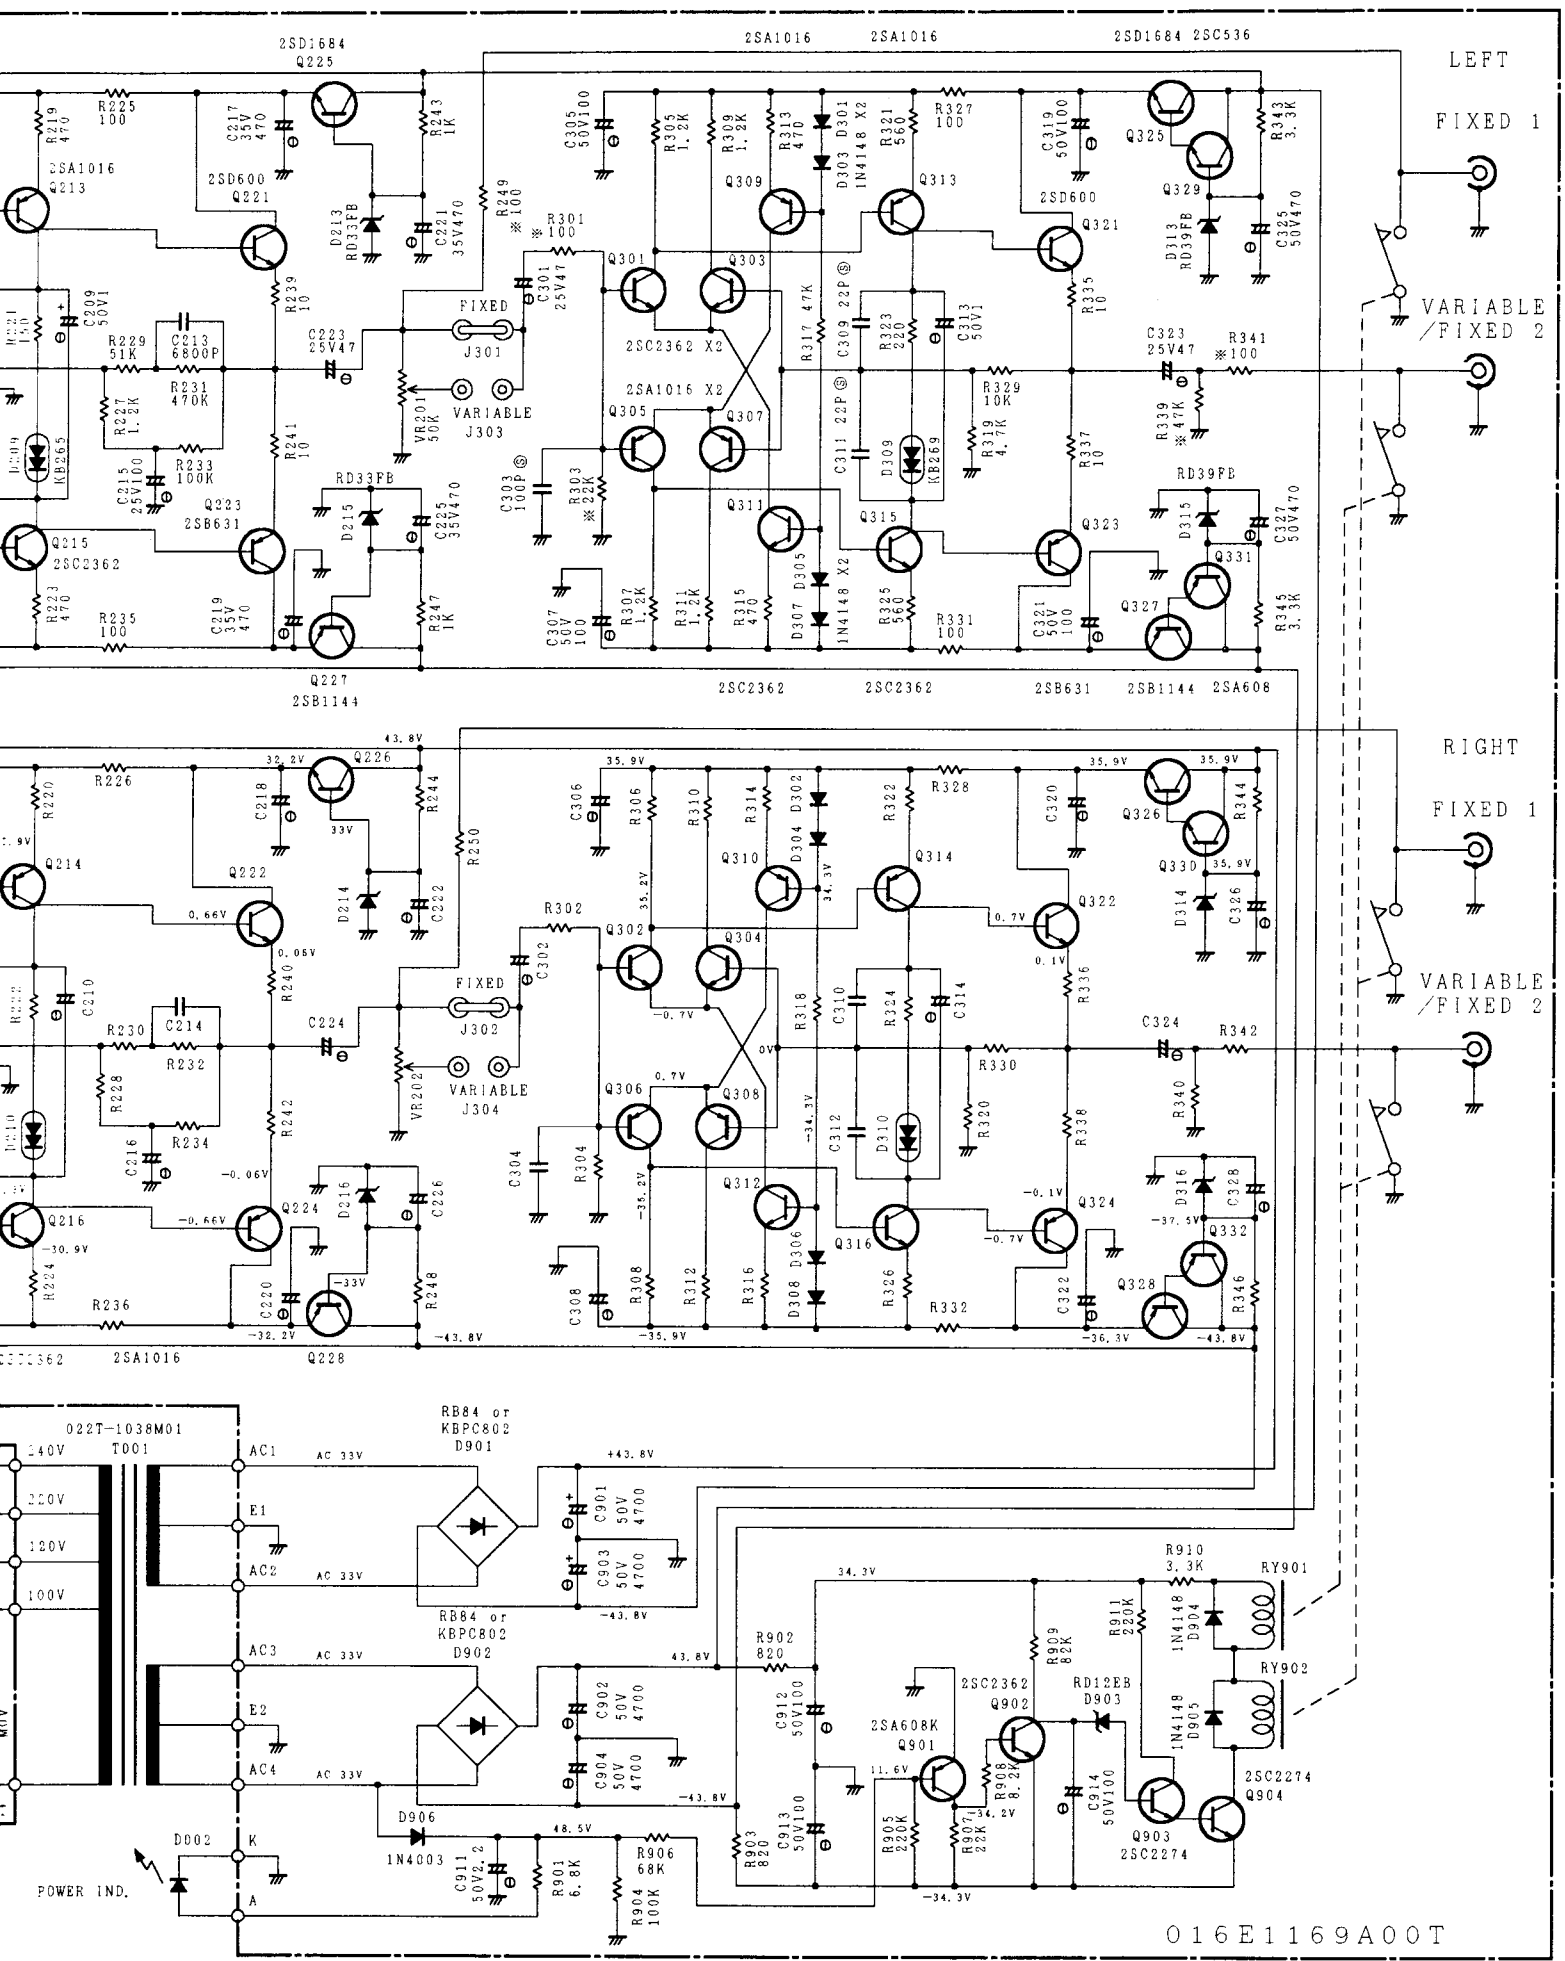

- 1) TO USE ONLY REPLACEMENT PARTS THAT HAVE THE CRITICAL CHARACTERISTICS RECOMMENDED BY MANUFACTURER.
- 2) TO MAKE LEAKAGE CURRENT OR RESISTANCE MEASUREMENTS TO DETERMINE THAT EXPOSED PARTS ARE ACCEPTABLY INSULATED FROM THE SUPPLY CIRCUIT BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

NOTES

- 1) NONMARKED RESISTORS IN OHMS 1/4W.
- 2) NONMARKED CAPASITORS IN MICRO FARADS.
- 3) VOLTAGES MEASURED WITH "VTVM" WITH NO SIGNAL INPUT.
- 4) * MARKED RESISTORS ARE VISHAY TYPE
