Lab Alley Adds Pentane and N-Pentane to its Solvent Product Mix, Offering Competitive Pricing and Faster Delivery Dates

Austin, TX – Lab Alley's (www.laballey.com) recently added [Pentane](#), also known as [n-Pentane \(Normal Pentane\)](#) to its solvent product mix inventory, offering competitive pricing and faster delivery dates. Lab Alley now carries [Pentane and n-Pentane](#) in all major packaging sizes ranging from bulk Pentane volumes such as [55-gallon drums](#) to smaller volumes like [500mL bottles](#). All of the [Pentane and n-Pentane](#) solvents are stocked in Pennsylvania, Texas and Southern and Northern California warehouses. All orders for [Pentane and n-Pentane](#) are shipped same-day or next-day to cater to customers that desperately need fast delivery timelines.

[n-Pentane](#) is used as a solvent and in many industrial applications such paints, coatings, pharmaceutical and petrochemical. [Pentanes](#) are used as solvents in laboratories, [for extraction processes](#), as a reagent and as fuel components. Pentane, a hydrocarbon, has properties that are similar to butanes and hexanes. [n-Pentane](#) is used for the extraction and eluting of distillates, concentrates, volatiles and essential oils from plant materials and cannabis. [n-Pentane can be used with hydrocarbon extraction systems that extract THC oils, CBD oils and dabbing oils from cannabis.](#)

"Pentane and n-Pentane are critical solvents that are used for extraction process and eluting of concentrates. Therefore it is a critical solvent that is used in the manufacturing of products so it is really important that companies have this available and delivered in a timely manner or else their manufacturing process stops!", says Fred Elabed, Partner of Lab Alley LLC. One of the delivery challenges with [Pentane and n-Pentane](#) is that the larger volumes between [4 liters](#) and [55 gallon drums](#) are Hazardous material which means the solvent cannot have expedited shipping (2 day or overnight). Per UPS and FedEx guidelines [larger volumes of Pentane and n-Pentane](#) can only be shipped using Ground service. Because of the larger volumes of Pentane and n-Pentane being Hazardous, it's important that this item be in stock in strategic locations close to the customer so they can get it within 2 days instead of 2 weeks. Lab Alley has Pentane and n-Pentane in stock in all major packaging sizes on the East Coast, Southwest, and West Coast to give the customer a great price and fastest delivery time within the industry. Lab Alley also has Pentane and n-Pentane available in small volumes from [500mL - 1 liter bottles](#) that are non-Hazmat and can be expedited shipped overnight or 2 day air to the customer. "By having Pentane and n-Pentane in stock in all major sizes and multiple warehouses across the USA and having a acute understanding of the entire shipping and delivery process, Lab Alley is able to offer Pentane and n-Pentane to any company with most competitive pricing and fastest delivery times within the industry," adds Fred Elabed.

Lab Alley offers [Pentane and n-Pentane](#) for a variety of research, industrial, and educational uses. [Pentane and n-Pentane](#) selections are offered in a wide variety of sizes to cater to each customer usage needs from a [500mL](#) and [4 liter bottles](#), [5 gallon pails](#), and [55 gallon drums to 270 gallon totes](#).
