

URBAN ULTIMATE

Six Premium Primed Colours: Stylish Single and Double Doors with Sidelights.

Our Urban Ultimate room divider range combines the industrial aesthetic with the warmth and texture of wood. The bold lines and geometric profiles of our dividers are perfectly complemented by the natural grains and textures of wood

The Eco-Urban doors are available in both single and double configurations with single or double side lights, providing versatility and convenience in any room. Choose from a range of clear, frosted, designer, or tinted glass options, allowing you to personalize the look of your divider to match your specific needs.

Moreover, the range offers four premium primed colours, including Shadow Black, Cloud White, Mist Grey, Stormy Grey, Sage Sky and Heather Blue, designed to enhance the contemporary look of your space. You can easily match your Urban Ultimate room divider with your existing interior decor or create a new look altogether.

Dividing in Style: The Power of Room Dividers.

Transform your home into a contemporary oasis with our exceptional Urban Ultimate Room Dividers. Our innovative design features our unique Eco-Urban doors multiplied into dividers, creating an impressive industrial effect that will leave you amazed.

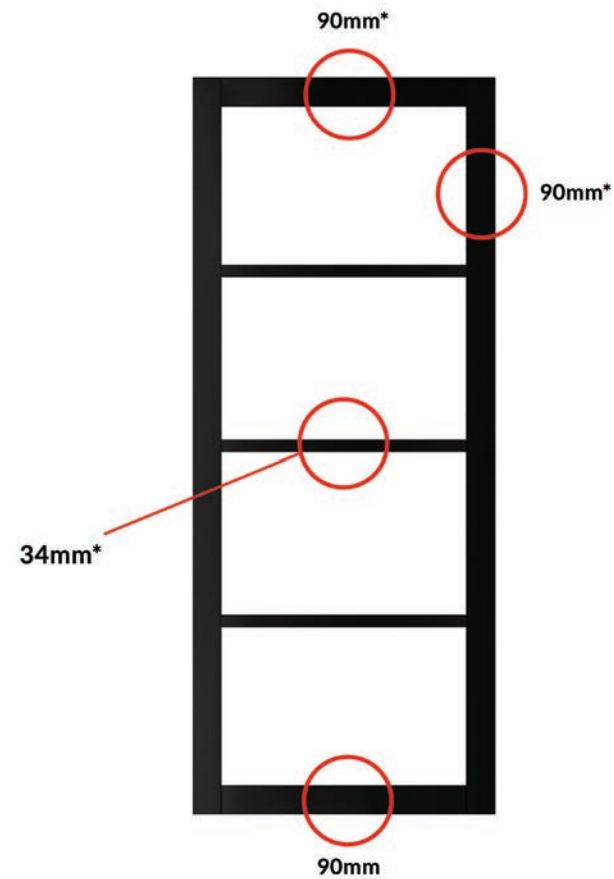

Urban Ultimate Room Dividers are designed to be practical and space-efficient. The standard width ensures a perfect fit in any room, while the customizable height allows you to tailor the divider to your specific needs. Made from durable, sustainably-sourced materials, our dividers are built to last and withstand the test of time.

Urban Ultimate Dividers: Thickness, Stiles & Rails, Core

Rails and Stiles are 90mm* Astragals are all nominal 34mm*

These heavily dowel jointed solid laminated wood doors are **40mm* thick** and are designed to meet the most demanding quality requirements. Eco-Urban are **British made** industrial style doors, made of sustainable, fast growing solid laminated timber .

*All dimensions and thicknesses are +/- 2mm.

The supplier of our **solid laminated core** timber for the Eco-Urban door range guarantee the wood is responsibly sourced and 100% FSC compliant.

Door stiles, rails and astragal materials are an Eco sustainable solid laminated timber in what is known as a laminated construction, this is when thick sections of timber are laminated to provide a product stronger and more stable than an individual timber section and all from FSC registered and managed forests, door panels are always 9mm thick moisture resistant MDF.

Urban Ultimate Dividers: Colour, Finish

Six Premium Primed Colour Options - Samples available.

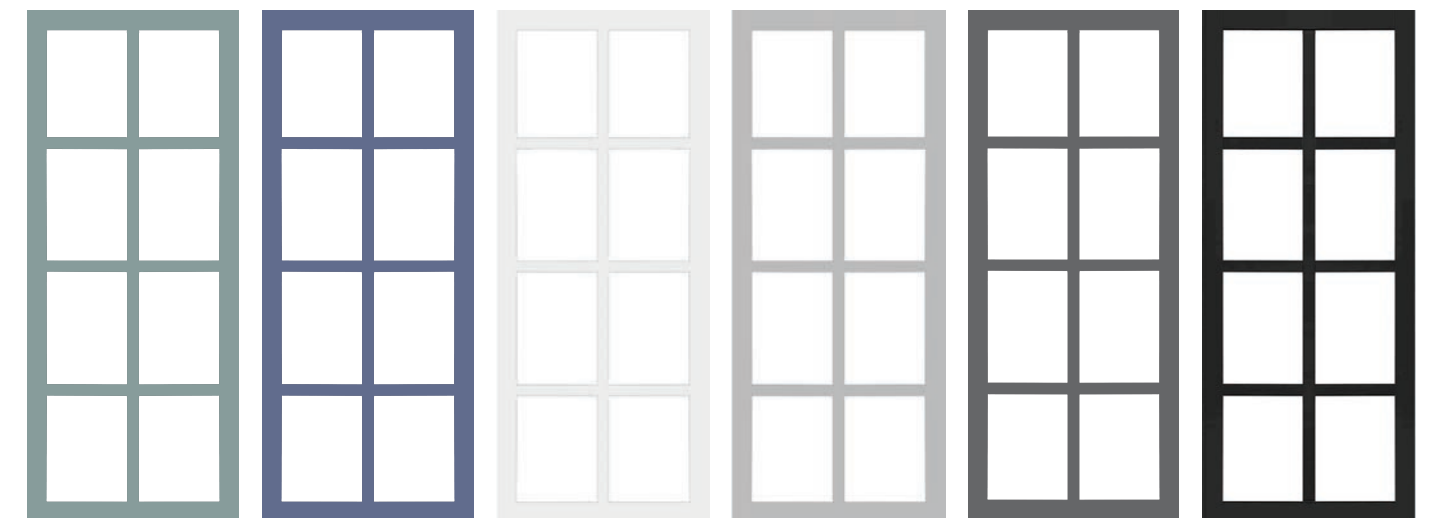

Premium Primed Finish:

The beauty of the grain may be visible on some of the real wood door material.

All our Eco-Urban products from our Thru brand are meticulously prepared, featuring a premium high-quality primer. These specialized paint materials, developed for us in Germany by the world-renowned paint supplier "Remmers," ensure a superior finish. While we acknowledge that some customers may find the finish satisfactory, applying a topcoat is required before installation, followed by touch-ups as needed.

One point to note is that all primed or painted doors but especially black primed doors will show movement between door rails and panels, the panel will possibly show "shrinkage" in the finish at the edges which will ultimately lead to customers unease, this is not a manufacturing issue, these doors need to be finished on site.

Rails & Stiles: Solid laminated timber.

Glass: All doors except Baltimore will be 4mm Toughened glass, some of the smallest panes may be 4mm annealed glass, Baltimore doors are glazed with 6mm thick glass.

Finish: Premium Primed

Urban Ultimate Dividers: Glazing

Glass supplied with our Handmade Eco-Urban doors conforms to British Standard BS EN 12600

Glazing:

A feature of safety glass is that each pane will have a safety stamp etched within the glass. The style and positioning of this etching varies depending on the manufacturer, most will be visible but some may be discreet or on occasion, they are hidden. This feature is in order to comply with safety building regulations and we, therefore, have no control over the requirement or style (annealed glass will not have a safety stamp).

Safety glass is defined as glass which must have passed an impact test and either must not break or must break safely. The test is intended to classify flat glass products into three principal classes by performance under impact and by mode of breakage.

Characteristics of toughened glass:

Fragmentation

Should the glass break, it will fragment into small pieces with dulled edges, thereby greatly reducing the risk of injury.

Increased resistance to mechanical stresses

Toughened glass offers impact resistance and bending strength up to five times more than annealed glass of the same thickness.

Increased resistance to thermal stresses

It offers greater resistance to thermal stresses than ordinary float annealed glass.

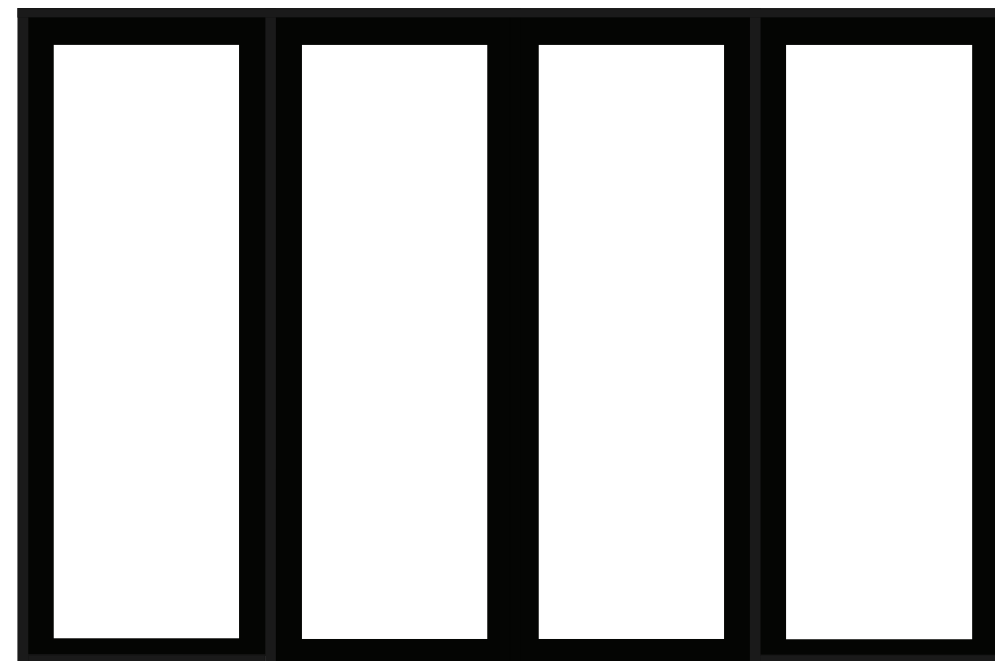

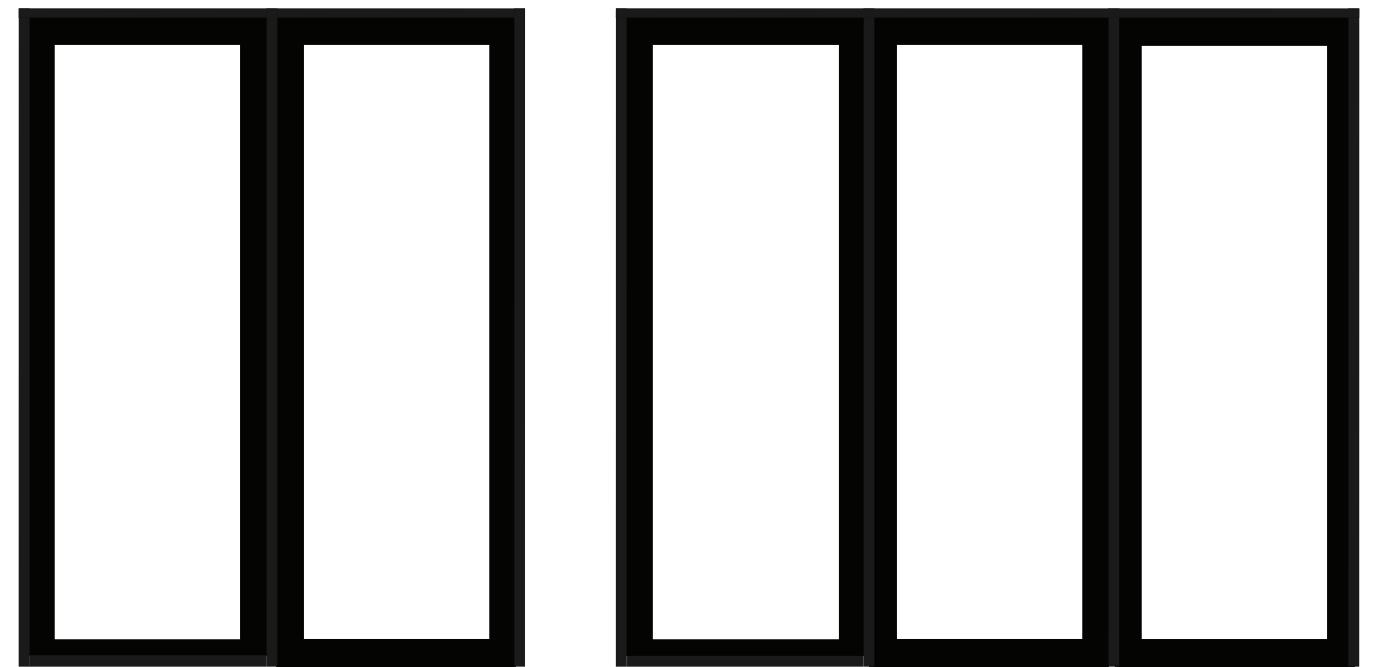

Urban Ultimate Dividers: Designs Available
