#### **Exposure controls**

**Appropriate engineering controls:** Good general ventilation should be used. Ventilation rates should be matched to conditions. If applicable, use process enclosures, local exhaust ventilation or other engineering controls to maintain airborne levels below recommended exposure limits. If exposure limits have not been established, maintain airborne levels to an acceptable level.

#### **Personal protective equipment:**

##### **General protective and hygienic measures:**

Wash hands before breaks and at the end of work. Observe good industrial hygiene practices. Do not inhale fumes.

##### **Breathing equipment:**

The use of an N rated dust/particle mask respirator is recommended.

##### **Protection of hands:**

Protective gloves

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

Nitrile, latex or poly disposable gloves.

##### **Penetration time of glove material**

> 480 min.

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
