FREQUENTLY ASKED QUESTIONS

WHY SHOULD I CHOOSE A CURCUMIN SUPPLEMENT OVER TURMERIC EXTRACT?

Curcumin is the most potent complex of turmeric, but there is very little curcumin in turmeric (only 2-6%) so by extraction you can efficiently achieve proper dosing of the compound.

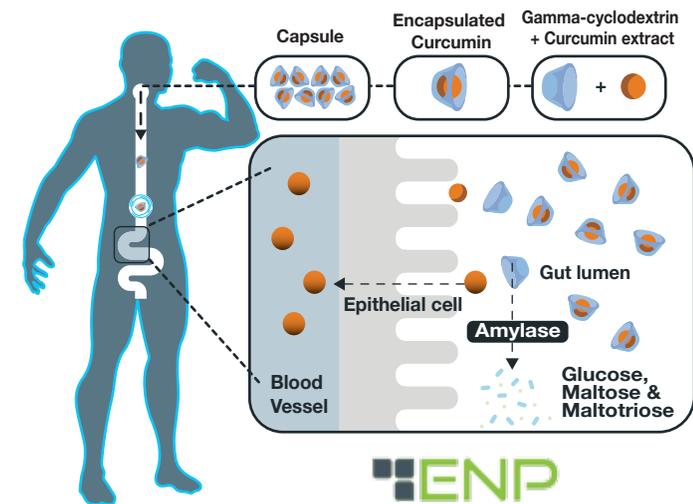

WHAT IS THE RECOMMENDED DAILY DOSE OF CURCUMIN AND DOES YOUR PRODUCT DELIVER THAT AMOUNT?

The ENP Liquid Curcumin bottle provides 32 suggested servings (one month supply) at 1 oz. each. One serving/dose provides 1,000 mg (1 g) of highly bioavailable curcumin in an easy to take and process liquid.

POOR BIOAVAILABILITY-SOLVED

The positive support curcumin can offer your overall health can be remarkable but only if it can be absorbed and properly utilized by the body. Curcumin molecules are hydrophobic (repel, fail to mix with water) and therefore agglomerate (collect/form into a group or mass) in the body, preventing systematic availability.

CURCUMIN ABSORPTION PROCESS

CAVACURMIN®

ENP'S Liquid Curcumin utilizes Cavacurmin®. Cavacurmin® utilizes a naturally occurring oligosaccharide (simple sugar) as a hydrophilic (mix with or dissolve in water) carrier. The curcumin extract is encapsulated, preventing agglomerates. The new molecular dispersion enables curcumin to be transported to the cells for use. Only the curcumin molecule is absorbed, the carrier is disposed.

THE CURCUMIN IS ABSORBED AT A RATE 40 TIMES HIGHER THAN PURE CURCUMIN POWDER AND SOME LEADING COMMERCIAL SUPPLEMENTS.

Systematic and unchecked inflammation becomes very destructive to overall health on a number of fronts. CURCUMIN'S BENEFITS STEM FROM ITS POWERHOUSE ANTIOXIDANT AND ANTI-INFLAMMATORY PROPERTIES.

"I have tried other turmeric & curcumin liquids or elixirs. I REALLY struggled to get them down, & would eventually stop taking them, throwing money out the window. ENP Liquid Curcumin is great tasting & so easy to take, there isn't any unpleasant after taste."

— Beverly Hyatt - San Bernadino, CA
