

CPACK LTD

TECHNOLOGY IN MOTION

MODEL 60

Features

- Speeds of up to 80 products per min
- Maximum product diameter of 5"
- Change parts fitted in 15 minutes
- Continuously running conveyor
- Product Detector only wraps when product is present
- Central lubrication system
- Optional card feed/ejector units

The **Model 60** wraps your products in a neat, conforming bunch fold with the surplus material firmly sealed on the base. The machine is able to wrap a variety of different products from cheese of all shapes, to cake and puddings with speeds of up to 80 products per minute.

The **Model 60** bunch wrapper comes with a set of change parts tailor made to your products which can be changed over in 15 minutes.

Quick changeover times give you maximum flexibility in your production allowing you to change products easily with less lost time.

This allows you to wrap a variety of different products or different sized items with just one machine..
