

Press release from Electrocompaniet, April 2021:

Introducing the TIDAL Connect integration

Tau, Norway, 22nd April 2021 – Electrocompaniet has updated its range of network audio streamers, speakers, and integrated amplifiers to include the latest TIDAL Connect technology.

With nearly 50 years of experience, Electrocompaniet has over the years created award-winning high-quality audio products, and it has always strived to ensure its customers enjoy listening to their music collections in a variety of different ways. Electrocompaniet was one of the very early adopters of the WIMP steaming service which became TIDAL in 2015, so there is a strong relationship between Electrocompaniet and TIDAL for many years. The addition of TIDAL Connect cements their commitment to continually expand the list of streaming options for their clients.

With TIDAL Connect, you can control music playback on Electrocompaniet streaming products directly by using the TIDAL iOS, Android, MacOS or Windows app.

TIDAL Connect support is available on Electrocompaniet's line-up of streamers and integrated amplifiers that use its EC Software Engine streaming platform. This also includes selected legacy products in the EC Living Line and Classic Line.

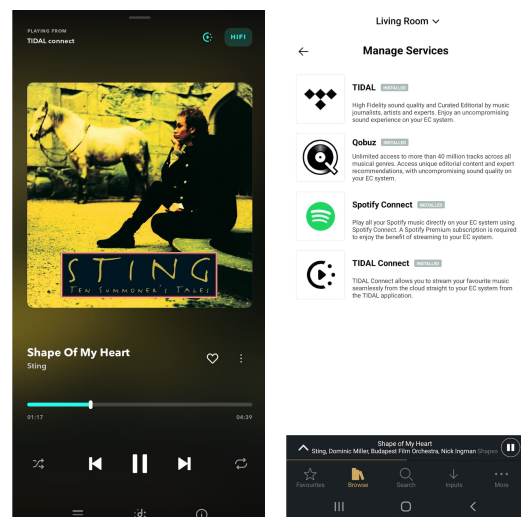

A firmware update for TIDAL Connect support is now available on the following Electrocompaniet products:

Current products

- Tana SL2 Speaker and streamer (EC Living Line)
- ECI 6 DX MKII Integrated Amplifier, DAC and streamer (Classic Line)
- ECM 1 MKII Network Streamer (Classic Line)

Legacy products

- Tana SL1 Steamer and speaker (EC Living Line)
- Rena SA1 Network Steamer, DAC and Amplifier (EC Living Line)
- Rena S1 Network Steamer and DAC (EC Living Line)
- ECM 1 Network Streamer (Classic line)
- ECI 6 DX Integrated Amplifier, DAC and streamer (Classic line).

"The EC Software Engine is our own, in-house developed critically acclaimed streaming platform and it has an extremely versatile core and structure, which enables us to constantly refine and upgrade its capabilities. We have spent years refining the software, and now we can easily add new functionality as well as continue to fully support our legacy products so that our customers' investments are kept up to date long after they're out of production," says Lasse Danielsen, Sales & Marketing Director at Electrocompaniet.
