

PLEXAMID SET UP INSTRUCTIONS

Cutting Guylines:

Guylines are pre-cut and attached for you. Linelocs are sewn in place for adjusting the lines. If you choose to switch out your lines for a different cord these are the default lengths:

Front center (1x) - Cut 102 inches (259 cm) and tie a stake loop at 40 inches (102 cm). The long end attaches to the tent and the short end attaches to the door hooks.

Walls (cut 4x) - 54 inches (137 cm)

Corners, Back Center (cut 5x) - 32 inches (81 cm).

Setup Instructions:

1) Adjust your trekking pole to around 48 inches (122 cm). If you expect your pole tip to sink into the ground, add a couple inches to compensate.

2) Give your corner guylines some slack. Stake out all four corner guylines at a 45 degree angle, roughly straight off the corner points.

3) Insert your trekking pole with the handle in the pocket at the peak, outside of the tent screen. Stake the front line.

- If the peak is too high, tighten the front corner lines. If it is too low, loosen them.

4) Stake out the back center tie out

- If the walls of the tent aren't smooth, you may need to reposition the corner stakes or adjust the lines tighter.

- If the back corners are too low, loosen the back guylines, and tighten the main peak line to pull the front of the tent down and raise the back up. It should be about 6-8" (18 cm) off the ground all the way around.

5) Stake out the four wall tie outs.

Storm Doors:

The storm doors can be clipped down to the front center guyline, or rolled up depending on the weather. Leave at least one door open for air flow when possible, unless the weather is bad.

Seam Sealing:

All Zpacks shelters have taped seams and bonded tie outs! No seam sealing necessary.
