REVERSAL INSTRUCTIONS

Bathroom Lock Reversal Instructions

- 1. Lay the Bathroom Lock on its side and remove the two case screws using a Phillips Screwdriver.
- Remove the front case plate carefully as to not disrupt the lock mechanism.
 Note. We advise you take a moment to familiar yourself with the internal workings of the Bathroom Lock before disassembly.
- 3. Using a Slotted Screwdriver or similar device with a thin head, remove the spring from behind the latch and lift it out of the case.
- 4. Remove the spindle mechanism and slide the latch out of the case.
- 5. Insert the spindle mechanism into the case.

- 6. Flip the latch to the preferred direction and re-insert it into the case. Allow enough space for the spring to be placed into the slot behind the latch as the latch is inserted.
- 7. Insert the latch fully and screw the front case plate back onto the case.
