

100% Locally Owned and Operated

WeedX Natural Weed Control

Non-toxic, effective, fast acting and safe around children & pets

WeedX is totally natural, making use of Mother Nature's Natural Acids – Acetic acid and Citric acid. It is **safe, effective and fast acting**.

How it works and when to use it

Natural Acids – Acetic and Citric acids synergise together to create a powerful and natural FAST ACTING KNOCK DOWN ACTION on weeds.

As WeedX is non-systemic (this means it does not kill the root of the plant) it is more suited to your smaller weeds which have low energy reserves in the root and hence will kill those plants.

Spraying time of the month and day is also important to consider. During Spring time when the sap is surging in all plants repeated spraying will be necessary depending on the species of plant.

The words “KNOCKDOWN” happens as the Acetic acid crushes the cells of the foliage which is why you will notice how quickly the plant will go down.

For best results spray during the warmest part of the day.

Even though we have found that at certain times of the year we need to do resprays for harder to kill weeds/grass we KNOW our soil life is not being destroyed.

Non-selective – means the WeedX will crush the cells of most foliage it comes into contact with so take care when spraying.

For best results spray WeedX on windless sunny days.

Benefits

- NON-TOXIC, SAFE & FAST ACTING – spray with peace of mind. Safe to use around children and animals
- EPA Approved
- Controls weeds the natural way
- Effective & fast acting – results within hours not days
- Fully bio-degradable in soil, water & atmosphere
- Won't destroy the soil life and does not harm mature tree bark

info@cleanlink.co.nz | www.cleanlink.co.nz

- Acetic Acid based
- Affordable
- Works all year round
- NO glyphosate
- NO lingering smells
- Ready to spray & concentrate available
- NZ owned & operated – keeping it local

Uses

- Borders & edges, drives and patios
- Preparation of veggie garden – allow 24hrs before planting to allow soil PH to re-balance.
- Will kill small weeds and mosses that haven't much energy in the root reserves. The idea is to get the weeds before they are too big.
- Excellent on broad leaf e.g. dandelion and plantain.
- Kills both annual and perennial weeds
- Liverwort for Nurseries
- Small Gorse and broom
- Mosses, lichens, liverwort, fungus
- Public areas, gardens and lifestyle blocks

Available in:

5 Litre Concentrate: Makes 15 – 20 Ltrs of spray **\$46.98**

5 Litre Ready to Use: **\$29.95**

Also available in 20 Litre Concentrate & Ready to Use – Please enquire

WARNING

Test on any hard surface before spraying around it because acid can clean surfaces so well causing it to lighten in colour, or you may want to just clean the whole hard surface with WeedX.

Goulter's Vinegar Products Ltd can not be held responsible for customers not following the directions on the label when using their WeedX herbicide. Please ensure all the health and safety directions are followed when spraying our herbicide. Thank you.

IMPORTANT NOTE

Thoroughly WASH out all containers to protect the seals and nozzles. Double rinse your spray tank after use and then pump fresh water through your sprayer to remove all residual acid.

EPA certified WeedX acetic acid based product is the first of its kind to be approved in New Zealand.

- EPA APPROVAL NUMBER – WeedX Bio-herbicide Concentrate – HSR101099
- EPA APPROVAL NUMBER – WeedX Bio-herbicide Ready to Spray – HSR101101
