

## 1. Attaching The Table Legs

Using the provided bolt and washer, insert the bolt through the diagonal corner support of the table into the pre-drilled hole on the top of the table leg. Ensure the bolt passes through the recessed hole located on the corner support brace to align properly with the table leg's receiving end.

## 2. Secure the Leg

Next, tighten the bolt using the provided hex key. Make sure the leg is securely fastened, and the bolt is fully tightened to keep the leg firmly attached to the underside of the table.

## 3. To Adjust Table Height

Begin by aligning the dowels at the end of the table leg with the corresponding holes on the table frame. Gently push the leg into the frame until the dowels are fully inserted, making sure it fits securely.

## 4. Repeat for the Remaining Legs

Follow the same process for the remaining table legs, ensuring all dowels and bolts are properly aligned and tightened. Once all legs are attached, your table should be securely assembled and ready for use.
