

# Waterfilter.direct

Whirlpool-Pro II Range specifications

# Whirlpool-Pro II

**GENERAL Information: Guaranteed to remove and improve harmful water contaminants including but not limited to, Sediment, Chlorine, Chemical, Cyst, Heavy Metal, lead, Fluoride, PFA, PFO, Scale, VOC, Nitrates, Arsenic, sodium removal.**

Whirlpool-Pro II					
Model	Description	Basic Description	Micron Rating	Max Flow (LPM)	Capacity
PPSF-1	Quick change sediment filter	Reduces sediment, dirt, rust, algae, turbidity, particulate contaminants.	<b>1 Micron</b>	5.0	12 months
ACCB-0.5	Quick change Coconut carbon block	chemical reduction chlorine, taste & odor and other contaminants	<b>0.5 Micron</b>	5.0	6 months
ACCB-0.5	Quick change Coconut carbon block	Nano Silver Alkaline Improve Oxygen level, raise the pH to alkaline	<b>0.5 Micron</b>	5.0	6 months

## Whirlpool-Pro II

### Stage 1 Sediment Filter (1 Micron)

The Stage 1 Sediment Filter (1 Micron) is the initial component in our systematic 3 stage Whirlpool-Pro filter setup. Engineered to reduce sediment, dirt, rust, algae, turbidity, and other particulate contaminants, this filter establishes the foundational phase of comprehensive water purification.

#### Material Composition:

Constructed entirely from 100% polypropylene fibers, this filter ensures optimal chemical resistance. The polypropylene material eliminates bacterial breeding concerns, emphasizing a hygienic filtration process. Explore heightened water purification with the Stage 1 Sediment Filter (1 Micron) – an integral part of our performance driven 3-stage system. Rely on its precise functionality to address specific particulate contaminants and contribute to a systematic approach to water quality enhancement.

### Stage 2 Coconut Carbon Block Filtration Precision:

Progressing into the second phase of our advanced 3 stage Whirlpool-Pro filter system, the Stage 2 Coconut Carbon Block Filter (0.5 Micron) is engineered to elevate water purity with targeted precision.

#### Contaminant Removal Expertise:

This filter is designed to effectively remove sediment, fine particles, chemicals, and initiate color extraction, contributing to a refined water composition. Its finely tuned 0.5-micron carbon block structure ensures a high level of filtration accuracy. The inclusion of silver impregnation enhances the bacterial properties, ensuring an added layer of safety.

#### COCONUT Activated Carbon:

Crafted with Sustainable (SPACC) activated coconut carbon, the Whirlpool-Pro I Filters utilize a specially designed adsorbent media. This distinctive approach is tailored for the efficient reduction of chlorine taste and odor, as well as other contaminants. The result is water that not only meets but exceeds expectations in terms of taste and purity.

#### Sediment Reduction at 0.5 Microns:

The 0.5-micron carbon block cartridges employed in this stage play a crucial role in reducing sediment to microscopic levels, contributing to the overall clarity and cleanliness of your water.

Embrace the meticulous filtration capabilities of the Stage 2 Coconut Carbon Block Filter (0.5 Micron) as it stands as a cornerstone in our performance-driven 3 stage system. Experience the harmonious balance of contaminant removal, taste improvement, chemical and sediment reduction for water that meets the highest industry standards.

### Stage 3 Carbon Filtration Excellence:

Continuing the trend set by preceding stages, this filter is engineered to remove sediment, fine particles, chemicals including fluoride, contributing to a refined water composition. .

#### Slightly Enhanced Taste:

Consistent with the system's commitment to superior water quality, these filters contribute to a slight enhancement in taste, ensuring a satisfying drinking experience.

#### Innovative Alkaline Enhancement and pH Balancing:

The Whirlpool-Pro II final stage 3 Alkaline Carbon Filtration:

Progressing to the third stages of our advanced filter system, the Stage 3 Alkaline Carbon Filter takes water purification to a holistic level with precision and innovation. Elevating your water alkalinity for improved health benefits.

**The Newly Designed 3-Stage Quick Change Whirlpool-Pro Filter system:**

Revolutionizing water filtration, our newly designed 3 stage Whirlpool-Pro II water filter system brings unparalleled convenience to your fingertips. Engineered for effortless replacement and trouble-free installation, this system sets a new standard in user-friendly water purification.

**Effortless Replacement:**

Say goodbye to the hassle of complicated filter replacements. Our innovative quick-change design ensures a seamless and swift replacement process, allowing you to maintain optimal water quality with minimal effort.

**Trouble-Free Installation:**

Designed with simplicity in mind, installation becomes a stress-free experience. Our system is crafted for easy setup and installation with the plug and play design.

**Compact and Space-Saving:**

Optimizing kitchen space, the compact design of our system is a game-changer. Save valuable kitchen real estate without compromising on the effectiveness of a 3-stage filtration process.

**SYSTEM INCLUDES:**

- INCLUDES:
- 3 Stage Water Filter System
- Antibacterial Sediment Filter (1 Micron) x 1
- Coconut Carbon Block Filter (0.5 Micron) x1
- Coconut Carbon Block Filter (0.5 Micron) x1
- Cartridges Life:
- Antibacterial Sediment Filter : Up to 12 months
- Coconut Carbon Block Filter : Up to 6 months
- Coconut Carbon Block Filter : Up to 6 months
- Operating Parameters:
- Feed Pressure 135 kpa - 550 kpa
- Temperature 4 - 40°C
- Accessories
- Pressure Limited Valve
- 2 Way Isolation tap
- SUS304 Tap
- Pipe

**Note Caution:**

This water filtration media is not suitable for use with water that is microbiologically unsafe or water of unknown quality without adequate water testing. Ensure your water source meets safety standards.

**Warning:**

To prevent property damage from water leaks, please follow these guidelines:

1. Read and follow the installation instructions carefully before installing this product.
2. Test water pressure before installation and consider using a pressure limiting valve to prevent water hammer, which can cause leaks or damage.
3. Replace the cartridge based on its recommended lifespan or sooner if you notice a significant reduction in water flow.

**Filter Activation:**

Prior to using the filter, flush it for 5 minutes to ensure optimal performance and water quality.

**Professional Assistance:**

Please consult with your waterfilter.direct distributor or a licensed plumber for system installation or filter changes.

The Whirlpool-Pro filter media configuration may change at any point without notice.

All systems come equipped with the best outcome in mind based on installation location and water quality. Water Filter Direct continue to improve product performance and design.

Please consult with a Authorised Water Filter Direct consultant for the correct filter cartridge configuration for your application.
