LJ1700 LAMINATOR

## Reliability meets performance

The assembly of the LIJIE Laminator is fast and easy that you can start the production as soon as possible. With the air compressor, you are able to do full-auto warm laminating for your loose materials. It comes with a trimming switch which enables to cut the sides of the material while its on the process of laminating.

## Why LIJIE Laminator?

Time-saving as compared to traditional application method. The LIJIE Laminator features a film and paper-tightness-degree system that reduces the risk of laminating folds. Also, it is built for durability, with a high accuracy infra-red control temperature.

## Specifications:

|                          |                         |
|--------------------------|-------------------------|
| Machine Size             | 2100mm x 650mm x 1200mm |
| Laminating Width         | 1630mm                  |
| Max Working Thickness    | 23mm                    |
| Speed                    | 16m/min                 |
| Laminating Type          | Cold Lamina             |
| Diameter of Upper Roller | 1300mm (Silicon)        |
| Preheated Time           | 10 - 15min              |
| Pressure/Height Adjust   | Automatic               |
| Max Temp                 | 120 degree celcius      |
| Voltage                  | AC110V-240V 50HZ-60HZ   |
| Working Power            | 1400W                   |
| Working Electric Current | 12A                     |
| Hand Protection Device   | Safety Laser Sensor     |
| Anti Static Electricity  | Yes                     |
| Certificate              | CE, RCM, ROHS           |
| Weight                   | 290kg                   |
