We know you are excited about getting going but please:

✓ Reseat and charge the battery before the first ride
✓ Make sure the pedals are tight
✓ Make sure the front wheel is installed properly and tight
✓ Inflate the tires properly
✓ Check that all screws are properly torqued
✓ Carry out a fine adjustment of the gears and brakes
✓ Learn how to use the LCD display
✓ Wear a helmet before riding

Please Note: Your bike may need further adjustments after assembly.

If you have any trouble with setup, please contact us online or through our email address: support@xprit.com
Assembling Your E-Bike

1) **Read all of the instructions carefully.** Be familiar with the proper operation of all items.

2) This quick guide is intended to list the steps needed to assemble your bike with some mechanical skills. It is not a complete manual or training. If you do not feel comfortable or lack some of the skills to assemble it yourself, reach out to a cyclist friend, a local bike mechanic or one of our support technicians for guidance.

3) Our QA mechanics have assembled and tested your bike beforehand.

4) To assemble your bike, work on a clean area with enough space to maneuver.

5) If installed, remove the battery from the bike to start the assembly.

6) Inspect the bike completely to be sure no damage occurred during shipping.

7) The kickstand is designed to support the bicycle only. Not the rider mounted.

8) You can adjust your saddle position and the tilt on your handlebar items for comfort.

9) Check all screws and parts are tight and properly fixed. We recommend a pre-trip inspection before your first rides.
Installing Your Handlebars

1) Place the handlebar in the handlebar mount being careful with the wires.
2) Face the mounting brackets on the front end of the mount with the round edges facing outward. Adjust the handlebar angle to your comfortable riding posture.
3) Secure the mounting brackets with four screws. (Screws shall be tightened with 6N.m torque)
4) Verify your front tire lines up with your headset.
5) Check whether all headset items are tight.
Installing Your Front Wheel - Quick Release Version

Insert the front wheel in between the front fork on the bike. Be sure the fork is resting on the outside of the axle.

1) Align the disc brake between the brake caliper as shown in Figure 2.
2) Insert the skewer into the wheel axle (See Figure 1). Note: spring, cam follower, and lever should be on the LEFT side of disc brake. The adjustment nut and spring should be on the right side. (See Figure 2)
3) Screw the skewer into the end nut until almost tight.
4) Lift the lever up until parallel with the front fork. You should feel the axle tighten into the front forks. Your front wheel is now installed.
Installing Your Front Fender and Headlight

1) Install the front fender first. Align the fender clamps on the left and right legs of the fork with the fender stay to enable the fender in the line with the wheel. Fix the stay with screws (M5 screw) provided on the clamp.

2) Place the headlight with its bracket in front of the fork gantry, put the lifting lug of the fender behind it. Link and secure the three pieces with the screw provided on the headlight (you might need to secure the opposite nut slightly so the screw doesn’t turn).

3) Connect the headlight cable with the wire coming from battery tube.
Installing Your Pedals

1) **Warning:** Incorrect installation will cause damage. Please read the instructions and watch our videos if needed.

2) Identify the Left and Right markings on the pedals. They can only be installed in their respective side.
   a. L is for the Left Pedal and it goes on the Left Crank Arm.
   b. R is for the Right pedal and it goes on the Right Crank Arm (Chain Side).

3) Sitting on your bike the pedals go on the Left and Right side respectively.

4) Keep the pedal Horizontal while hand screwing to get the thread started. Then Use your 15mm wrench to tighten them.

5) Both pedals tighten towards the front of the bike. The left pedal is reverse threaded to allow this.

6) **The pedals need to be very tight (at least 25-35N.m torque), be sure to retighten after your first couple rides.**
Preparations Before Riding

1) **Read all instructions carefully**, be familiar with the proper operation of all items. Check for detailed information and guidance on our product page.

2) **Warning**: Basic electric precautions should always be followed to avoid issues or malfunction.

---

How to Power on the Bike

**To Lock the Battery and Power on the bike**
There are 3 gears on the power lock in the top of the downtube. From clockwise direction:
Unlock gear - Lock/Power off gear - Power on gear.

1) Turn the key on the unlock gear. Place the battery back to the battery tube, press it into the tube tightly and turn the key clockwise to the Lock gear, then the battery locked. If battery is not properly seated, users cannot take down the key.

2) Turn the key clockwise again one more gear to power on the bike. Now the bike is power on.

---

**To unlock and Remove the Battery**

1) Turn off LCD display. Turn the key to the off gear to power off the bike.
2) Push the key inward and turn counterclockwise to unlock the battery. Battery will pop out.
3) Use your hand to pull out the battery.

Note: The battery weighs heavy and should be handled with care.
When the Battery is Removed

- Do not touch the “+” and “-” terminal contacts on the top of the battery when the battery is removed from the bike.
- Be careful not to drop or damage the battery when loose from the bike.
- Avoid damaging the exposed connector terminals and keep them clear of debris.

How to Use the Display

1) Power on/off

Press the button to turn on the display. Your bike will be ON. Press again to turn it off. The display will automatically shut down when there is no operation or riding for 5 minutes.

2) Adjust the assist level
Short press “+” or “-” button to change the assist level from 0 to 5. 0 is without assist. 5 is the max assist level.

3) Headlight
If your bike is installed with a headlight, press and hold “+” button for 1 second to switch on or switch off the headlight.

4) Walking mode
Press and hold “-” button for 2 seconds to shift into walking mode, the display indicates P and the bike will be propelled at walking pace. Release the button to exit the walking mode.

5) Information menu
Press the button for 1 second to shift into information menu, it will show TRIP, ODO and TIME.

6) Parameter setting menu
With the display powered on, if you quickly press the button twice, it will shift into the parameter setting menu. Users are NOT supposed to change the factory default settings. You may exit by quickly pressing the button twice again or leave it without operation for 30 seconds.

Other operations
USB port
There is USB charge port on the left side of handlebar which you can connect to charge your cellphone.

Cruiser Control Function
The cruise control feature can be used to maintain a desired speed without using the Throttle or Pedal Assist.
To activate the Cruise Control function:
Use the throttle or pedal assist to reach your desired speed. While holding the throttle in a stable speed (speed should be over10mph) over 5 seconds, it will enter into cruise mode.
Under cruise mode, the current speed will be maintained without the need to use the throttle or pedal assist.

Deactivating the Cruise Control
To discontinue the use of the cruise control function you can do the following actions:
• Use the brakes by squeezing the brake lever
• Use the throttle
How to Charge Your Bike

The battery can be charged when locked on the bike or unlocked and removed from the bike.

1) Remove the rubber cover on the charging port and insert the charger into the charging port.
2) Plug the charger into an appropriate power outlet. When the charger is plugged in, the red light on the charger will illuminate to show that the battery is charging.
3) Charge the battery, making sure not to charge for longer than 14 hours at a time. When the battery is fully charged, the LED will turn green and charging will be stopped.

**Note:** The charger is designed to automatically stop charging when the battery is full, but unnecessary wear of the charging components could occur if the charger is left attached to the battery and a power source for longer than 14 hours. Detach the charger as soon as possible once the green light indicates a complete charge, to avoid unnecessary wear of charging components.

4) Once the battery is charged, unplug the charger from the power outlet.
5) Unplug the charger from the battery. Store the charger in a safe place for future use.

**Note:** The battery capacity indicator located at the left side of the battery indicates the battery capacity status. GREEN light indicates the voltage is higher than 48V; YELLOW light indicates the voltage is in between of 48V and 41.5V; RED light indicates the voltage is less than 41.5V. It's recommended to charge the battery in time when it's under yellow light status.
Notes of Charging and Storage

1) Pay attention to check whether the surface temperature of the battery case rises too high during charging. It is FORBIDDEN to cover the battery during charging.

2) Due to high temperature in summer time, it is NOT advisable to charge it immediately after riding. In winter, it is FORBIDDEN to charge the battery in environment below 0 °C. It is recommended to charge the battery in room temperature.

1) If the battery will not be used for a long period, take it off from the bike and discharge its capacity to 60%-80% for stock. Disconnect it from the charger and place it in a dry, ventilated place without direct sunlight. In order to maintain a long life-cycle, it is recommended to charge the battery every two months.
## Error Code

<table>
<thead>
<tr>
<th>Error Code</th>
<th>Error</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>Open Throttle Fault</td>
<td>Throttle has not returned to the start position on start-up. Check to see if the throttle can return to the start position or if there is something blocking the throttle unit. Contact technical support.</td>
</tr>
