

baby lock

Gloria

Gloria

Since its very foundation, baby lock has steadily been working on interesting engineering innovations and has continuously been growing its product range. The new model Gloria marks a new milestone. Apart from some well-known features from the successful baby lock coverlock machines, the new machine will impress you with the so-called RevolutionAir™ threading system. This fully automated jet-air threading system lets you thread not only the loopers but also the needle eyes easily with just a press of a button.

The knee lift and the speed regulation offer unique comfort for complicated stitching projects. When the presser foot is in the raised position, the machine doesn't start sewing for additional safety.

The automatic thread delivery system makes operation even easier because the thread tension no longer has to be adjusted by hand. Switching over from the cover stitch to the overlock stitch is already easy as it is. But the new machine now reduces the number of steps needed to change the needles even further. After taking the needles out of the needle clamp, the fastening screws don't have to be tightened by hand anymore.

... convinces both beginners and professionals

The baby lock brand has been appreciated for its ease of use for decades. Both beginners and advanced sewers can enjoy the machines' special technical features and all of the possibilities they offer right from the very start. Whether the direct start or the different setting variants, everybody loves the outstanding sewing results irrespective of the fabric and thread used.

Why a baby lock?

All of the innovations that come with the baby lock machines combine clever and high-quality mechanical features. The machines do not require any computer technology, making them less prone to faults and extremely durable, and thus guaranteeing long-lasting sewing happiness.

The world's first overlock machine that was developed for household use was a baby lock. From the very beginning, the motto was: We at baby lock deliver only the highest quality to our customers, made in Japan. baby lock does not rely on mass production, making this product something very special.

Our machines are produced in a craft-like manufacturing facility in the north of Japan. The staff test every single machine for 20 minutes. More than 30 different seams are sewn to guarantee the high quality demands placed on this product before it is delivered to our customers.

The very important and sensitive loopers are polished, inspected, tested and fine tuned by hand. The aforementioned processes are only some examples of the many individual operations that are performed by our highly specialised staff.

Creative realisation ... limitless ideas

Don't go astray ...

The hinged accessory compartment is located directly beneath the spool holder. Neither the cones nor the thread will move when opening or closing the accessory compartment. Taking out the tweezers, the screw driver or another tool will not affect the stitch quality. The thread path has also been improved and makes threading the chain looper much easier.

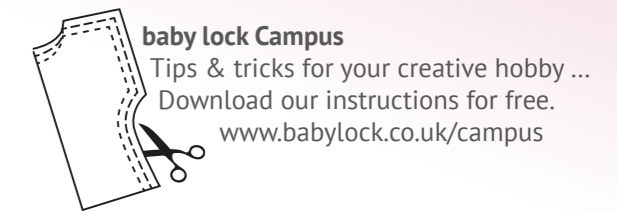

Safety first!

To ensure that everything is always under control, our Gloria allows you to vary the position of the presser foot without taking your hands off the fabric. The knee lift can be moved to the right, thus raising and lowering the presser foot. As long as it is in the raised position, the machine won't start stitching. This safety mechanism is only unlocked when the foot is back on the fabric. For maximum comfort, you can also set the stitching speed, which is a must in filigree stitching.

Pure fun with your hobby

Working with needle and thread requires a steady hand, a practiced eye and a lot of patience when it comes to threading. This step is so difficult for some beginners that it takes the fun out of sewing even before they get to work on their first piece of fabric. It doesn't have to be like this! Our handy RevolutionAir™ threading system solves this problem on its own. First the loopers are threaded at the touch of a button with a jet of air. Then the easy-to-fit needle threader helps you target the eye of the needle. Off you go!

Experience infinite refinement ...

Creative ideas can only develop where there is enough free space for them to unfold. Sewing is a handicraft that offers you a high degree of individuality, letting you showcase your own personal brand and discover artistic diversity through an exchange with other sewing enthusiasts. This is exactly what we want to encourage!

We offer a versatile tool for any type of fabric. Thanks to the automatic thread delivery (ATD) system, even working with difficult fabrics becomes child's play as the machine always provides the correct setting to achieve an optimum sewing result. The thread quality is irrelevant. Whether a sturdy yarn or an ultra-thin thread, the seams look neat. Our Gloria will convince you with a wide variety of standard and unusual decorative stitches. The unique wave seam is a special highlight.

Innovation meets fascination ...

User-friendly operation

Anne tells us about the *Gloria* from baby lock:

„This machine is better than any other I had before.“
