Patient: Jane Doe
DOB: 03-29-1959
Height: 5' 3"
Weight: 183 lbs

Practitioner: Joey Labs
Lab #: 346790
Collection Date: 11-14-2022
Received: 11-16-2022

Glyphosate Marker

Summary

The Glyphosate test is an important way to measure exposure to this common herbicide. Glyphosate can enter the skin by direct contact, via airborne exposure, by eating foods treated with the toxin or by drinking water contaminated with it. Glyphosate exposure can disrupt the gut microbiome and interfere with metabolic processes leading to disease of the body.

The test indicates that the level of glyphosate exposure is significantly elevated. Glyphosate is absorbed through the gastrointestinal tract from food sources that have been treated with the toxin, as well as airborne exposure, skin exposure and water sources that have been contaminated. Elevated levels can disrupt the gut microbiome leading to many diseases of the body.

Next Steps & Recommendations

EquiLife's 21-Day Dr. Cabral Detox

- The Dr. Cabral Detox is a comprehensive, full body Functional Medicine detoxification system that gently eliminates harmful toxins while rebalancing the body at an underlying root cause level. By combining the science of Functional Medicine with ancient Ayurvedic traditions, the Dr. Cabral Detox is a comprehensive method of restoring the body to a state of dynamic equilibrium. Summary

Depending on your individual levels of glyphosate, steps can be taken to help the body eliminate the toxin. It is important to reduce all known exposure through direct contact, through the air, in the drinking water and to avoid foods treated with chemical herbicides.

This test shows elevated levels of glyphosate. It is important to support the body with detoxification and to identify and remove the source of exposure. It is recommended to do EquiLife's 21-day Functional Medicine Detox and to swap out non-organic fruits, vegetables and grains for organic sources as much as possible. Ensure that you are drinking filtered water or bottled spring or mineral water. If there are symptoms of gas, bloating, pain or indigestion you may also want to run a Candida Metabolic & Vitamins Test to assess the gut microbiome. Retesting Glyphosate levels should be done in 12-16 weeks.
