

# Which Sullage Hose Option is Best for Me?

START  
HERE

Does your van have a grey water tank?

How often do you use your grey water tank?

Does your van have a washing machine?

Do you ever use mains-pressure hook-up?  
This means you leave the in-bound water hoses connected to your van rather than running on pre-filled tanks.

Is 6m total hose long enough?

What do you value more?

Does your storage bay have tight dimensions?  
ie. width is less than 37cm

**FLAT OUT**  
25mm Sullage hose  
6m on Compact Multi-Reel  
C3 / C3K

Contains 2x3m lengths and a joiner so you have choice of a 3 or 6m run. Housed on a Compact Multi-Reel, this is our best space saver sullage hose.

If you are mostly using the hose to drain a grey water tank, you are unlikely to need longer lengths of hose, one of the 3m lengths will be enough most of the time.

\*If you do need longer than 6m yet wish to use this Compact Multi-Reel variant, simply carry two units and another joiner, then you can extend the hoses when needed.

**FLAT OUT**  
25mm Sullage hose  
9m on Narrow Multi-Reel  
M3 / M3NK

Contains 3+6m lengths with a joiner. It is always safer to carry too much hose rather than not enough. In some caravan parks the drain is close, use the included 3m length only. Other places the drain is further away, the full 9m can be handy!

This unit is lighter and smaller than the 32mm version so helps you save space and weight.

**FLAT OUT**  
32mm Sullage hose  
9m on Original Multi-Reel  
M4 / M4K

Contains 3+6m lengths with a joiner. This is our highest flow rate grey water hose.

We recommend it for those with washing machines or those wishing for the fastest water drainage option. It is slightly larger than our other sullage hoses, yet an incredible space-saver compared with conventional hoses of equivalent flow.
