

Instructions and Precautions

Please be aware, whilst the cup is intended to be leak proof and therefore doesn't have an air hole and some suction may be experienced if taking large sips. For this reason, we recommend taking smaller sips to avoid the suction effect.

Please do not squeeze the silicone cup when it contains liquid as the lid may pop open from pressure.

We use vegan ink, therefore, there may be some fading in the logo after several washes. If you do not want this to happen, please do not "scrub" the area of the cup where the logo sits.

When closing the suction lid, please hold the sturdy plastic component at the neck of the cup to ensure cup stability.

Please use your new CRUMPLE with care. Whilst it is made to endure daily collapsing and expanding, you must do so gently with care as it is made from soft silicone. You must not pierce it with nails or sharp objects as it will split.

CRUMPLE®, is made ethically made in China, using sustainable practices with low carbon footprint.
