

Trike Tight Magnets

Assembly & Instructions

2. Locate the three holes where you will bolt on the magnets on your Roll around or Table Top Workstand.

MAGNET HOLES ON TRIKE TIGHT

Introduction

Both TrikeTight Workstands are pre-drilled to mount various accessories to expand the utility of the stand. A set of super strong magnets will allow you to secure a steel baking sheet or other steel object of your choosing to your workstand to create a place to set tools, parts, or even your coffee while you work on your trike.

Tools Required

You will need a 3mm Allen (hex) wrench.

Installation

1. Empty out your BAG OF PARTS. You will find three stainless steel bolts and three magnets with some white spacers to protect them in transit.

BAG OF PARTS

3. Identify the top of the MAGNETS. The magnets are like little volcanoes, with a bowl shape on the top side. Thread a bolt through the top of the volcano and into the workstand. This can be tricky, since the bolts want to stick to the magnets. Do this with all three magnets. Discard the white spacers.

4. You can now use those super strong magnets to stick you steel baking sheets or bowls or other steel containers to your work stand to help you hold stuff while you work on your trike. T-Cycle does not sell any containers like this, but they can be found in your local grocery or department store or even your own kitchen!

TRIKE TIGHT ROLL AROUND
