

## PATCHES

**M** COORDINATION BERLIN  
**D** FLIP SELLIN

Patches is a new type of lighting for home and corporate environments. A textile design with an integrated grid of micro magnets is the foundation for creating vast variations of cloud-like lighting objects. Patches can be seen as a system of equally sized textile modules that can be applied to structures of any size or type: It works just as well with a single LED or a spatial structure of fluorescent tubes.

Patches is washable, easy to exchange and can be reused for other lights at any point.

H 15.7" x W 51.2"
