ITALIC LIGHT

by COORDINATION Berlin

With „*Italic Light*“ COORDINATION Berlin created a sculptural, versatile side light that transforms from a shining atmospheric marble object to a directional light source. The touch-dim function lets the user interact intuitively with the design. „*Italic Light*“ comes equipped with a high performance long-life LED ring, a built-in transformer and textile cable. This crafted edition piece with its reduced sculptural approach plays on classic and postmodern design iconography. „*Italic Light*“ works well on sideboards, shelves and tables.
