

## DHS 10 SHELF

**M** RICHARD LAMPERT  
**D** HERBERT HIRCHE

In 1954, Herbert Hircche designed a shelving system, defined by functional simplicity and precisely designed details. Back then, the system was produced for some years by Christian Holzäpfel KG. 2019 Richard Lampert is re-introducing the shelf. ›Hircche DHS10‹ consists of tubular steel ›ladders‹, in which shelves, back panels or cabinet units are inserted. The individual components can be combined as desired, offering many different configurations and applications. A modern shelving system featuring the design principles of an era that was highly significant in the history of German industrial design.

MODULAR SYSTEM
