STUDIO

„With its rounded metal fixture it brings a sense of boldness and exalts the beauty of curved lines “

Onda is a modular shelving system that elegantly joins form and function. With its rounded metal fixture it brings a sense of boldness and exalts the beauty of curved lines and soft contours at the same time, bringing an unexpected feminine edge to the material.

The shelves are made of oak wood and come in four different variations. By a small milling on the bottom the high-quality wooden shelves can be easily placed on the black lacquered or chrome-coated frame.

*the Onda Shelf Small | Double Section* — Usable as a low shelf — accessible even for the smaller inhabitants of the house — but still expansive in width, this elegant shelf is great for low ceilings and pairs perfectly with a picture gallery. This way you don't have to sacrifice storage space even with flat units.

*the Onda Shelf Big | Double Section* — As the largest unit of the Onda system, this beautifully shaped piece of furniture is not only a modern and artistic version of an oak shelf, but also offers remarkable capacity for books, objects, plants, and anything else you care to place in a visible and well-organized way.
