

## Nano SPY T3

Mini Extreme Temperature Data logger 2,4GHz radiofrequency communication

Non contractual photo

## **Presentation**

The Nano SPY T3 measures and records temperature with its external probe. It transmits the data to a nearby LINK module via 2.4 GHz radio frequency communication.

The data are then automatically sent to the JRI secure Cloud for hosting, and will be managed from JRI MySirius web application.

If thresholds are exceeded, alerts are transmitted in real time to react immediately.

Designed to monitor thermo-controlled chambers, the sensor can be fixed thanks to its magnet outside the equipment.
