*Variable Voltage Adjust
3 Clicks to Cycle Through
2.6V ● 3.4V ● 4.0V ●*

*Preheat Function
2 Clicks to Activate*

5 Minute Auto Shut Off

CHARGING

Power off unit prior to charging. Remove cartridge (not included) prior to charging.

For the best charging experience, use wall charger to charge device. Never use a car adapter. Do not charge longer than 2 hours.

ADAPTER USE ON WATERPIPE

1. Pull open silicone plug on the bottom of unit.
2. Screw on waterpipe adapter to a snug fit (do not overtighten).
3. Place unit onto waterpipe (fits 14mm & 19mm female fittings).
4. Allow one preheat cycle to prime the cartridge.
5. Select your preferred heating mode.

6. Start your vaping session by pressing the power button and holding or just pull to activate via autodraw. Auto draw will activate automatically.

CLEANING

1. Open bottom silicone plug.
2. Wipe clean with 91% isopropyl alcohol using a dampened cotton-tipped swab.
3. Wipe and twist until cotton-tipped swab is clean.
4. Poke through the connector hole inside of the unit with a small pin, needle or toothpick to clear the airpath way. Oil will collect naturally in this area. Repeat this step with the adapter as well to keep airflow pathways open.

Only use wall charger no larger than 5V 1A output.
Atomizer Applicable resistance: 1.0Ω-3.0Ω
