

MARPHYL IS A CERTIFIED B CORPORATION

We are delighted to make an exciting announcement today. MARPHYL Marine Phytoplankton has achieved B Corporation certification!

This certification recognizes our commitment to meeting the highest standards of social and environmental performance, transparency, and accountability. It is a testament to our dedication to operating as a force for good, not just for profit.

MARPHYL's B Corp certification confirms that the company meets rigorous standards of social and environmental responsibility, ethical business practices, and sustainable operations. It reflects our commitment to creating positive impact through our products, operations, and community engagement.

We prioritize sustainability and ethical sourcing in every aspect of our business, from harvesting our ingredients to packaging our products.

Sustainability

During the harvesting and growing stage – in big quantities – of this amazing form of life, the process removes tons of CO₂ from the atmosphere, which is shown as a massive production of oxygen. A tank of one million litres of ocean water can produce the equivalent oxygen of one forest hectare. The process releases the oxygen equivalent to a 7-hectare forest. When the water first comes in, one millimetre of water contains approximately 800 cells of marine phytoplankton, which will start multiplying as a result of the natural sunlight and the natural surrounding environment. At the harvesting stage, one millimetre of water has approximately 128,000,000 cells of marine phytoplankton. The remaining water is released back into the ocean with more phytoplankton that was originally taken in order to have an even more positive impact on the local marine ecosystem. The production plays an important role in the marine environment.

The above process does not affect in any way the natural balance of the surrounding marine ecosystem nor any living creature.

**PROFIT MUST
NOT DEVALUE
PEOPLE
& PLANET.**

B Corp Certification is a designation that a business is meeting high standards of verified performance, accountability, and transparency on factors from employee benefits and charitable giving to supply chain practices and input materials.

**MEASURE
MORE THAN
PROFIT.**

We donate 1% of all our sales to Mission Blue

At MARPHYL®, we feel it is our social commitment to give back to what makes us possible to exist. We have decided to donate 1% of all our sales to Mission Blue, an initiative of the Sylvia Earle Alliance (S.E.A.), that with public support protects Hope Spots – special places that are vital to the health of the ocean, the blue heart of our planet. With two hope spots under consideration where MARPHYL® Marine Phytoplankton is taken form, it was the perfect organisation to contribute to.

If you would like to get more information on this wonderful organisation visit mission-blue.org.

**Thank you all for your support
and for being with us on this journey!**
