

West Coast Seeds *How to Grow Carrots*

1

Soil - Cultivate soil deeply

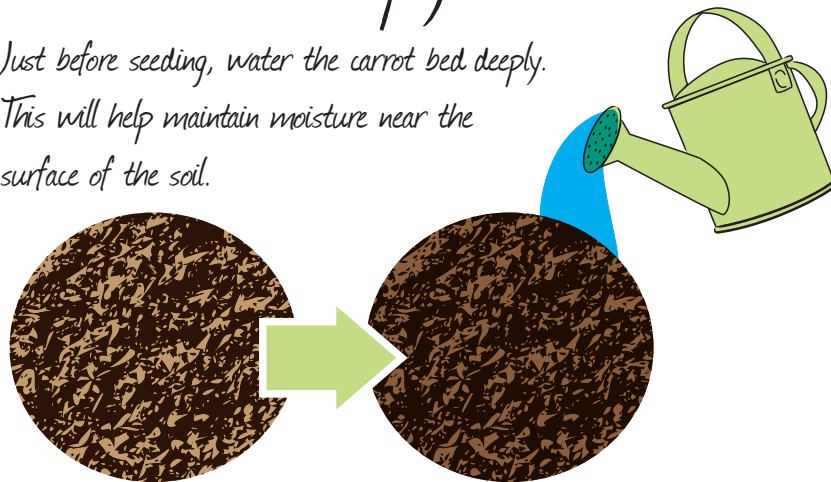

Use a fork to break up the soil to a depth of at least 30cm (12"). Carrots thrive in loose, fluffy soil with no stones or pebbles to interrupt their growth.

2

Soil - water deeply

Just before seeding, water the carrot bed deeply. This will help maintain moisture near the surface of the soil.

3

Sow - plant in a row *from April to mid-July*

Create an indent in the soil about 5mm ($\frac{1}{4}$ ") deep to form the row using a stick or other straight, narrow object. Sprinkle seeds as evenly as possible into row. Sow short rows every two to three weeks. Don't plant the whole packet at once!
