Continued...

We highly recommend using an LED dimmer that is also an ELV (electronic low voltage) dimmer. A buzzing or flickering light is typically an indication that the dimmer being used is not compatible with the lights. Please consult dimmer manufacturer for maximum lamps per dimmer capacity.

*May experience "pop-on", lights cannot be turned on immediately to their minimum level. The slider needs to be raised above the minimum light level for the lights to first turn on if they were initially off. Then, the slider can be lowered to get to a lower light level; the dimmer cannot be turned on to just the minimum level.
