

## USER MANUAL THE RING

### PRODUCT INFORMATION

Welcoming, warm, and solid. Fire bowl  
The Ring is a rough beauty with a  
sweltering hot heart. Its curved shape  
with vents between the slats providing  
extra oxygen for the fire, makes a good,  
hefty flame and little to no smoke. Tout  
feu tout flamme, quoi.

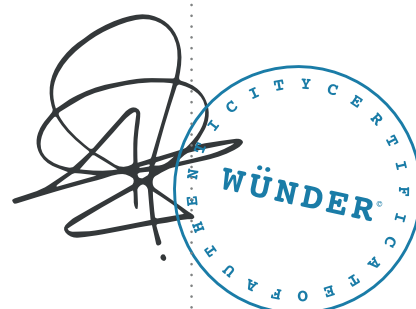

### SPECIFICATIONS

- Diameter: 105cm
- Weight: ± 60kg
- 3mm Corten Steel

## MATERIAL?

The Ring is made out of high-end Corten Steel, which gives it a modern look all the while forming a strong durable layer. Exposed to the weather, the material takes on a life of its own: The Ring may not be completely rusted when it arrives, but inevitable rainfall and other precipitation will ignite a rusty oxidation layer to form, protecting The Ring against further corrosion. The natural formation of this barrier can take up to 1 year. However, spraying regularly some water on The Ring will speed up this transformation.

The start of the rusting process can cause The Ring to leave some coloured spots on your terrace, especially on a light-colored surface. The risk of marks decreases over the course of just a few weeks.

Any spots present can easily be washed away with a rust remover and some scrubbing. Eventually, The Ring doesn't need any further maintenance. Because of the rusting process it has created its own protection layer. How convenient! Oiling or painting is not necessary.

## USE?

A fire, no matter how cozy or controlled, is still a fire. Never use The Ring in an enclosed space. Additionally, it's also recommended to not place The Ring near low hanging branches that might catch fire. A stable, fireproof concrete, stone or tiled surface is the safest space to use The Ring. Make sure to never place the fire bowl on a flammable surface. During drier periods, like summer, you should err on the side of caution while using The Ring in dry grass fields, where fire spreads easily and quickly.

Dry wood will burn easier and better than wet wood and will give you a lot less smoke. Never use gasoline, oil or any kind of highly flammable substances to light your fire. These substances are hard to control if combined with fire and can lead to dangerous situations.

Never leave The Ring unattended when in use and keep children at a safe distance. There's always a small chance that you get hit by sparks and embers.
