

BAMBOO FACTS AND CARE

Bamboo is an eco-friendly choice due to its rapid growth and strong root system that reproduces without the need for replanting. Growing up to a foot per day it matures in 3 to 7 years. Bamboo is actually a type of grass that grows to the strength of a tree. Treated bamboo provides a durable, light weight wood material that is used for home construction and furniture. Your bamboo sink can serve you for a lifetime when properly maintained.

CARE AND MAINTENANCE

Cleaning is simple. Just wipe with a soft damp cloth when needed. A liquid anti-bacterial soap can be used when needed. Wood cleaner and polish can also be used to maintain the lustre. Do not use harsh cleaners or bleach on your bamboo sink. They may damage the finish.

Your bamboo sink has been sealed with a wood sealant. We recommend you re-seal your sink twice per year to maintain the beautiful finish.

Tips and Warnings:

Be sure to install drain completely flush with bottom of sink so there is no standing water after use.

Do not place hot items directly on surface.
