

# CONCRETE & TERRAZZO FACTS AND CARE

A concrete sink is a durable, long lasting product that requires little maintenance. Distinctive colors such as Vintage Brown and Copper Green are available, as well as Terrazo, a concrete mixture with bits of marble mixed in with the sand to create the decorative Terrazo effect. Our sinks are coated with multiple layers of sealant that serve a dual purpose of water-proofing your sink and protecting against scratches. Concrete provides a unique new appearance for your bath and provides many years of reliable service.

## CARE AND MAINTENANCE

We recommend mild soap or vinegar for cleaning your concrete sink. Do Not use harsh or acidic cleaners as they may damage the surface.

Your sink has multiple layers of protective coating to resist scratches and stains. A maintenance kit is included with your sink for your convenience. Severe stains or scratches can be repaired using the enclosed sandpaper. We encourage you to use the enclosed wax to re-seal your sink every six months. Always clean your sink before re-sealing it.
