

## RESIN FACTS AND CARE

Our resin soaker tubs and sinks are cast in a joint-free mold using a polyester-aluminum trihydrate blend material that hardens to a solid surface. Resin's non-porous surface naturally resists stains, scratches and discoloring. Sometimes referred to as "man-made stone", extremely durable in either smooth glossy or silky matte finish, this versatile material also allows more freedom of design since it can be cast into countless shapes and forms.

### Care and Maintenance

Clean water will remove most dirt from your resin tub. Use only mild cleansers that are safe for painted surfaces when necessary. Do not use abrasives, acids or ammonia. Wipe dry after each use to retain original beauty.

### Maintaining Finish

To maintain your silky matte finish wipe in circular motion with a microfiber cloth.

To maintain your glossy finish use damp sponge or cloth with mild paste cleanser.

For both finishes rinse and dry with a soft cloth.
