Skylux[®]

Manual chain actuator

General description of the product

The Skylux® manual chain actuator is a very discrete opening system for any kind of skylight. His compact and aesthetical design allows a full integration in the Skylux® concept.

The body is made from white coated (ral 9010) cast aluminium and is entirely maintenance free.

The chain itself is made from rustproof materials. The actuator is operated with a handle with hook, to be hooked in the eyelet on the actuator's body. 30 rotations allow the maximum opening of 260 mm.

Requested accessories for mounting with a Skylux® unit are added.

Specific characteristics manual chain actuator

Measurements

Length	237 mm
Height	56 mm
Opening / Stroke	260 mm

Manual chain spindle with eye

Optionele Hooked winding rod
