Durable, ecological and innovative

Skylux, an innovative company inspired by daylight.

Everything we do at Skylux revolves around daylight. We design, produce and distribute flat roof windows and veranda systems that are known across Europe for their innovation and durability. Our founder, Albert Glorieux, was passionate about daylight. He started the business in 1954 and his son Rik took over with the same enthusiasm. Jean Glorieux is the third generation, carrying on the vision of his father and grandfather and bringing his own energy and ideas.

Evolution and production efficiency are of key importance. That is why we have strongly focussed on automated production processes in recent years. It allows us to hold a large stock of high-quality daylight solutions that we can deliver quickly.

Skylux also continues to invest in sustainability. That is why we have started the transition to full electric company cars and why we already have over 70 on-site charging points. We have also invested in our own 'giga battery' to store our generated solar energy and take a step towards energy independence.

Discover all our daylight solutions on www.skylux.eu or follow Skylux on social media

The wonder of daylight

Creating a healthy home starts with daylight. Sunlight is an important source of vitamin D and contributes to our **health**. Having access to enough daylight is therefore essential to getting through the day feeling well-balanced and without fatigue.

The sun also stimulates the production of cortisol, a hormone that makes us more active and improves our concentration. Cortisol not only gives us energy, but also **inner peace**. That's why we feel less stressed when we receive enough daylight.

In addition to our health, daylight also benefits the **environment**. Daylight through skylights or roof windows is free. The more daylight you let into your home or workplace, the less artificial light you need. That's not only kind to the environment, it reduces your electricity bill too.

Did you know that ...

- daylight stimulates our immune cells?
- daylight helps us sleep better?
- daylight strengthens our bones and teeth?
- daylight lowers our blood pressure?
- daylight makes us feel happier?
- daylight enhances brain responses?

Flat roof windows Plenty of daylight with a sleek design

Daylight through a flat roof window can transform dark corners in your home into pleasant rooms bathing in natural light. Discover the many benefits of our flat roof windows and get inspired:

1. More daylight than with a normal window

Daylight enhances our sense of wellbeing, improves concentration and is great for our health. Bringing natural light into your home is therefore essential. That said, a flat roof window is the perfect solution since light from above is three times stronger than light that enters through a straight-wall window.

2. Sleek design

Our flat roof windows have a refined design with sleek lines that really matches a modern home. Skylux offers 80 different window sizes so you will always find the right fit. Our largest size measures no less than one by three metres for maximum daylight.

3. Excellent insulation

A Skylux flat roof window excels in insulation. Thanks to the insulating PVC frame and the super insulating safety glass, the iWindow2 presents an insulation value of $1.0 \text{ W/m}^2\text{K}$. If you have a passive house, then our iWindow3 offers the best solution with an insulation value of $0.5 \text{ W/m}^2\text{K}$.

4. Fresh air ventilation at any time

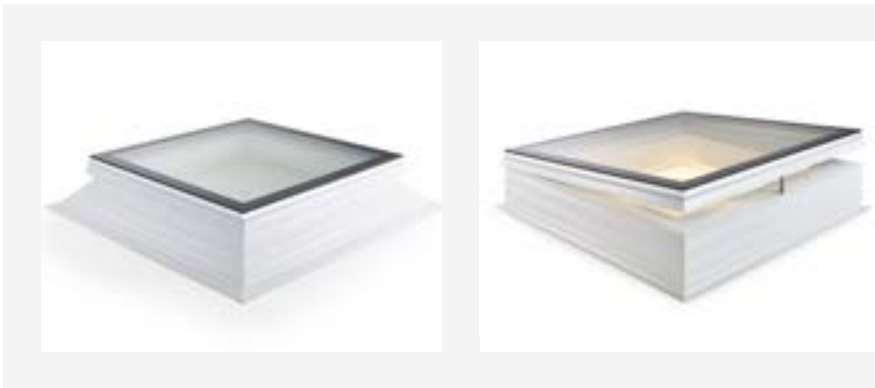

Instead of a fixed flat roof window, you can also choose an openable model that can provide fresh air ventilation. A splendid way to ventilate a room during the day or at night to cool your home during the hot summer.

5. Sound insulation

A major advantage of a flat roof window in glass compared to a plastic skylight is the sound insulation. The glass in the window has more mass than plastic glazing and is therefore more sound-resistant.

more than
80 standard
sizes

The Skylux flat roof window is available as a fixed or openable model.

clear

opal

solar control

clear,
opal or solar
control

Our flat skylights with double or triple layered glass are the perfect combination of maximum light transmission, maximum thermal and sound insulation and a sleek design. They do not only look great, they also score high in every aspect.

iWindow

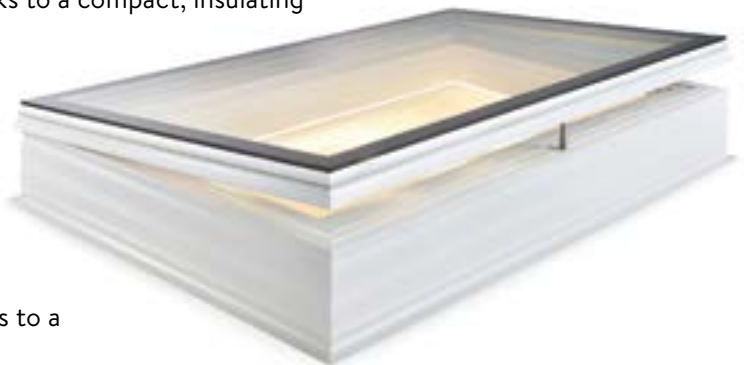

The Skylux iWindow skylight offers a sleek look, an excellent soundproofing of 39dB and a maximum light transmission.

This flat roof window excels in insulation thanks to a compact, insulating PVC frame and super insulating safety glass.

The iWindow2 version consists of HR++ glass with an U_g -value of $1.0W/m^2K$.

The iWindow3 version consists of HR+++ with an U_g -value of $0.5W/m^2K$.

You save between 63% (HR++) and 81% (HR+++) of energy in comparison to a classic double-walled plastic skylight. These windows are easy to install on a Skylux PVC curb thanks to a mounting set (clips).

iDome

The Skylux iDome is composed of a compact, insulating PVC frame and super insulating glass HR++. The inner pane is made of layered glass and the outer pane of tempered glass. This skylight window is always combined with a dome of choice (e.g. clear, Heatstop, opal) and offers the perfect insulation and maximum light transmission. Easy installation on a Skylux PVC curb is also guaranteed thanks to a mounting set (clips).

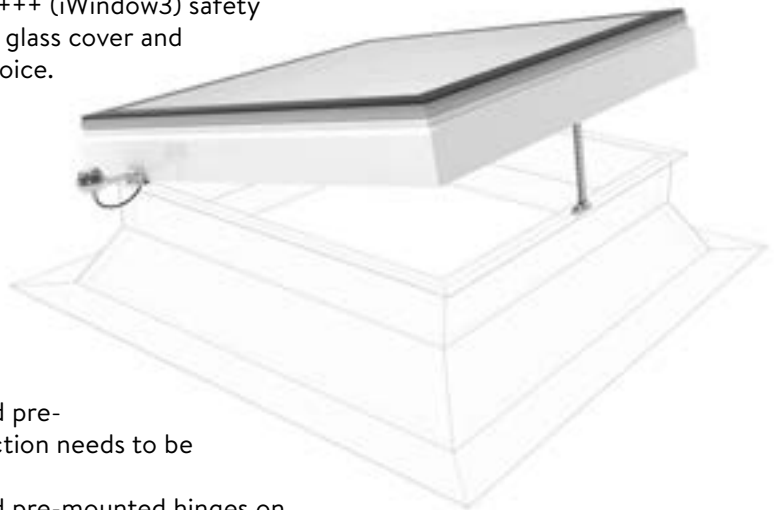

iWindow Flex

The Skylux iWindow Flex also consists of a compact, insulating PVC frame with the super insulating HR++ (iWindow2) or HR+++ (iWindow3) safety glass. We call this versions 'Flex' because the glass cover and PVC frame are easy to install on a curb of choice.

The following combinations are available:

- Fixed model with low PVC frame and pre-mounted hinges on 2 long sides
- Fixed model with high PVC frame and pre-mounted hinges on 2 long sides (possibility to convert into an openable version)
- Fixed model with low PVC frame, adapter frame and mounting set with clips included
- Openable version with high PVC frame and pre-mounted hinges on one side. Opening function needs to be installed by the customer
- Openable version with high PVC frame and pre-mounted hinges on one side. Opening function and rain detection installed by Skylux (optional)

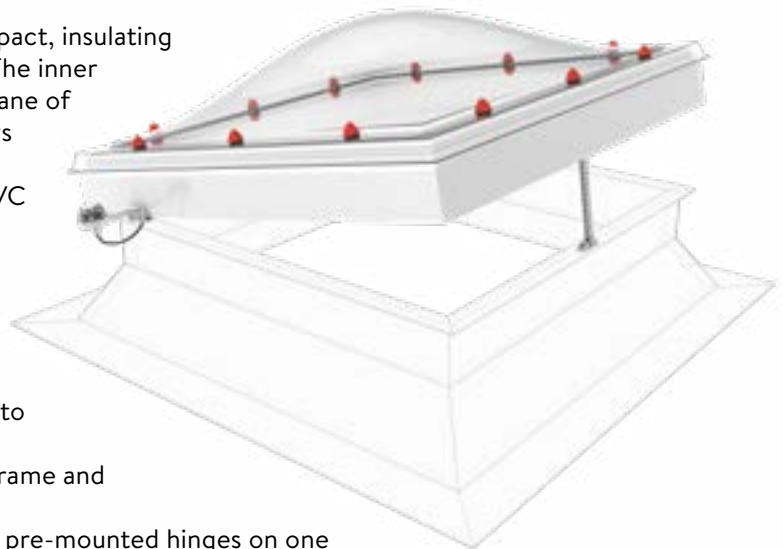

iDome Flex

The Skylux iDome Flex is composed of a compact, insulating PVC frame and super insulating glass HR++. The inner pane is made of layered glass and the outer pane of tempered glass. This skylight window is always combined with a dome of choice. We call this versions 'Flex' because the glass cover and PVC frame are easy to install on a curb of choice.

The following combinations are available:

- Fixed model with low PVC frame and pre-mounted hinges on 2 long sides
- Fixed model with high PVC frame and pre-mounted hinges on 2 long sides (possibility to convert into an openable version)
- Fixed model with low PVC frame, adapter frame and mounting set with clips included
- Openable version with high PVC frame and pre-mounted hinges on one side. Opening function needs to be installed by the customer
- Openable version with high PVC frame and pre-mounted hinges on one side. Opening function and rain detection installed by Skylux (optional)

Control your flat roof window and/or electric screen with your smartphone

DuoControl

Our flat roof windows and screens can be operated with both the supplied remote control and your smartphone.

Discover how you can control your Skylux product with Matter, a technology that enables a seamless connection between smart devices. Thanks to Matter and Skylux, you can manage your skylights with your favourite home apps, like Google Home, Apple HomeKit and Samsung SmartThings. Connect your Skylux device in just a few steps and smarten up your home with Skylux and Matter.

What do you need?

- 1 A Skylux product compatible with Matter (iWindow openable, Flex 2.0 and electric screen Solar or 230 volts).
- 2 A thread border router.
- 3 A smartphone or tablet (Android or iOS)

5 steps

In just 5 steps, you can successfully add your Skylux product to the chosen app and control it with your smartphone or tablet.

Scan this QR code and follow the instructions.

This remote control is included as standard.

iWindow fixed model
on a PVC curb

iWindow / iDome

1 FIXED MODEL

The Skylux fixed model (F) consists of the following separate elements:

1. Glass cover

iWindow2

An insulating iWindow2 flat roof window with double safety glazing HR++.

U_g glass = 1.0W/m²K

Choice between clear glass, opal glass or solar control glass.

or

iWindow3

An insulating iWindow3 flat roof window with triple safety glazing HR+++.

U_g glass = 0.5W/m²K

Choice between clear glass, opal glass or solar control glass.

or

iDome

- A plastic skylight of your choice (prices p. 68 to 80). Standard clear.

The price of the skylight is not included in the price on the table page 14.

- Combined with a glass cover with double safety glazing HR++; U_t : 0.55 – 0.93W/m²K.

The inner pane is made of layered glass and the outer pane of tempered glass.

2. PVC curb

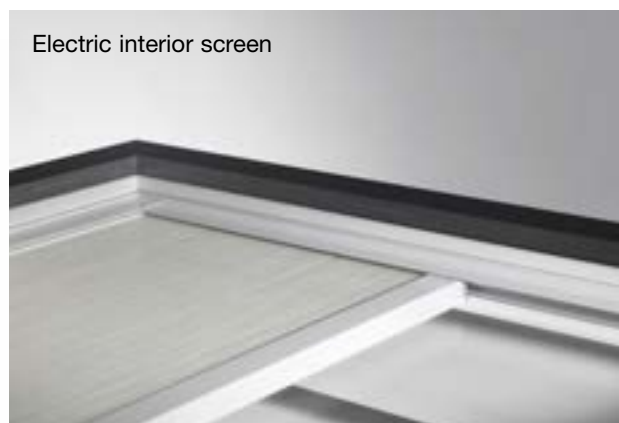

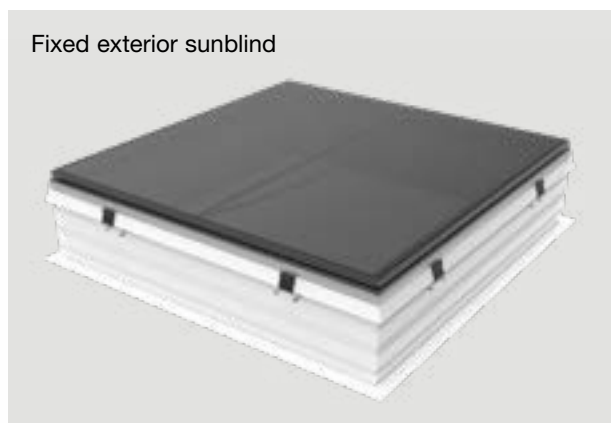

A PVC curb of your choice. Mounting set (clips) are included for all curbs.

The PVC curb 16/00 cannot be combined with a flat roof window.

Aluminium profile (flashing profile) included to easily pull up the roofing when using a 20/00 curb.

3. Following options are possible:

- Fixed exterior sunblind
- Electric screen as sunblind or blackout blind: 230 volts or Solar. Technical details of these accessories: see page 132 to 140
The screen can be operated as standard with a remote control, but you can also operate it with your smartphone or tablet (see page 10).
- Manual interior sunblind: see page 136

* The electric screen comes as standard and is delivered separately. Skylux can also pre-mount the screen for a surcharge of € 200 (VAT excl.)

- Sunblind in stock, blackout blind and insect screen 20 working days
- Sunblind ready for delivery within 5 working days, blackout blind and insect screen 20 working days
- Ready for delivery within 20 working days

iWindow openable model

2 OPENABLE MODEL

The Skylux openable model (O) consists of the following elements:

1. Glass cover

iWindow2

An insulating iWindow2 flat roof window with double safety glazing HR++.

U_g glass = 1.0W/m²K

Choice between clear glass, opal glass or solar control glass.

or

iWindow3

An insulating iWindow3 flat roof window with triple safety glazing HR+++.

U_g glass = 0.5W/m²K

Choice between clear glass, opal glass or solar control glass.

or

iDome

- A plastic skylight of your choice (prices p. 68 to 80). Standard clear.
The price of the skylight is not included in the price in the table page 20.
- Combined with a glass cover with double safety glazing HR++; U_t : 0.55 – 0.93W/m²K.
The inner pane is made of layered glass and the outer pane of tempered glass.

2. PVC curb

Installed on a PVC curb 20/00 EP (Energy Profit) with a built-in actuator 24V, control unit (power supply 230V) and remote control and control for smartphone (DuoControl). Price of the curb is included in the price in the table page 20.

Aluminium profile (flashing profile) included to easily pull up the roofing.

This openable model opens up to 10cm.

3. Following options are possible:

- Rain sensor
- Fixed exterior sunblind
- Electric interior screen (sunblind, blackout blind or insect screen). The screen can be operated with a remote control as standard, but you can also operate it with your smartphone or tablet (see page 10).
- LED lighting – keep in mind that the roof opening must be 4cm larger for the LED lighting (see explanation on page 82). The LED lighting offers variation in light intensity and colour temperature.

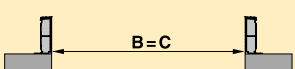

Technical details of these accessories: see page 132 to 140

- Manual interior sunblind: see page 136

To prevent stagnant water and to enable a self-cleaning effect of the flat roof window, we recommend a 5° pitch of the daylight element on the roof.

Aluminium profile (flashing profile) included to easily pull up the roofing.

Rain sensor is optional: € 250 VAT excl., must be ordered at the time of purchase and not afterwards.

■ Skylight dome not included with iDome. Choices see page 68-80. ● Ready for delivery within 5 working days

○ Ready for delivery within 10 working days ○ Ready for delivery within 50 working days

- Sunblind in stock
- Sunblind ready for delivery within 5 working days, blackout blind and insect screen within 20 working days
- Ready for delivery within 20 working days

Delivery time for electric screen as sunblind = delivery time for glass cover (since it is pre-mounted as 1 unit). If you choose a blackout blind or insect screen, however, the delivery time of the glass cover with screen is 20 working days instead of 10. The delivery time of 50 working days remains unchanged.

- Sunblind in stock
- Sunblind ready for delivery within 5 working days, blackout blind and insect screen within 20 working days
- Ready for delivery within 20 working days

Delivery time for electric screen as sunblind = delivery time for glass cover (since it is pre-mounted as 1 unit). If you choose a blackout blind or insect screen, however, the delivery time of the glass cover with screen is 20 working days instead of 10. The delivery time of 50 working days remains unchanged.

iWindow fixed with a low frame
on a polyester curb

iWindow Flex / iDome Flex

1 FIXED MODEL with low frame

The Skylux fixed model (F) with low frame consists of the following elements:

1. Glass cover

iWindow2

An insulating iWindow2 flat roof window with double safety glazing HR++.

U_g glass = 1.0W/m²K

Choice between clear glass, opal glass or solar control glass.

or

iWindow3

An insulating iWindow3 flat roof window with triple safety glazing HR+++~.

U_g glass = 0.5W/m²K

Choice between clear glass, opal glass or solar control glass.

or

iDome

- A plastic skylight of your choice (prices p. 68 to 80). Standard clear.

The price of the skylight is not included in the price in the table page 26.

- Combined with a glass cover with double safety glazing HR++; U_t : 0.55 – 0.93W/m²K.

The inner pane is made of layered glass and the outer pane of tempered glass.

2. PVC frame

Aesthetic low PVC frame.

3. Curb

Your current skylight curb is maintained.

Possible on the currently installed curb of choice (polyester, metal, other).

Check our technical file.

Please note: not possible on PVC curb 16/00.

4. Mounting set

In case of a fixed model and if the existing curb is maintained, you can simply fix the glass cover (iWindow2, iWindow3 or iDome) on a curb of choice by using the supplied mounting set (hinge system).

Not possible to convert into an openable version.

5. Following options are possible:

- Fixed exterior sunblind
- Electric interior screen (sunblind, blackout blind or insect screen): 230 volts or Solar. Technical details of these accessories: see page 132 to 140. The screen can be operated with a remote control as standard, but you can also operate it with your smartphone or tablet (see page 10).
- Manual interior sunblind: see page 136

iWindow Flex fixed with a high frame
on a polyester curb

2 FIXED MODEL with high frame

The Skylux fixed model (F) with high frame consists of the following elements:

1. Glass cover

iWindow2

An insulating iWindow2 flat roof window with double safety glazing HR++.

U_g glass = 1.0W/m²K

Choice between clear glass, opal glass or solar control glass.

or

iWindow3

An insulating iWindow3 flat roof window with triple safety glazing HR+++.

U_g glass = 0.5W/m²K

Choice between clear glass, opal glass or solar control glass.

or

iDome

- A plastic skylight of your choice (prices p. 68 to 80). Standard clear.

The price of the skylight is not included in the price in the table page 32.

- Combined with a glass cover with double safety glazing HR++; U_t : 0.55 – 0.93W/m²K.

The inner pane is made of layered glass and the outer pane of tempered glass.

2. PVC frame

High PVC frame.

3. Curb

Possible on a curb of choice (PVC, polyester, metal).

Check the technical file.

4. Mounting set

Mounting set included (hinges) for easy installation on the curb.

Possible to convert into an openable version.

5. Following options are possible:

- Fixed exterior sunblind
- Electric interior screen (sunblind, blackout blind or insect screen): 230 volts. The screen can be operated with a remote control as standard, but you can also operate it with your smartphone or tablet (see page 10).

Technical details of these accessories: see page 132 to 140

- Manual interior sunblind: see page 136

3 FIXED MODEL with low frame and adapter frame included

The Skylux fixed model (F) with low PVC frame and adapter frame consists of the following elements:

1. Glass cover

iWindow2

An insulating iWindow2 flat roof window with double safety glazing HR++.

U_g glass = 1.0W/m²K

Choice between clear glass, opal glass or solar control glass.

or

iWindow3

An insulating iWindow3 flat roof window with triple safety glazing HR+++.

U_g glass = 0.5W/m²K.

Choice between clear glass, opal glass or solar control glass.

or

iDome

- A plastic skylight of your choice (prices p. 68 to 80). Standard clear.

The price of the skylight is not included in the price in the table page 38.

- Combined with a glass cover with double safety glazing HR++; U_t : 0.55 – 0.93W/m²K.

The inner pane is made of layered glass and the outer pane of tempered glass.

2. PVC frame

Low PVC frame.

3. Adapter frame

The adapter frame is a sturdy, well-insulating intermediate frame and offers many **combination options** for flat roof windows and (hybrid) skylights on **curbs made of different materials and/or with staggered daylight sizes**. The frame is included in the price table that follows.

4. Curb

Possible on a curb of choice. See also the technical preconditions.

5. Mounting set

Screw the adapter frame onto the curb of your choice (screws not included).

In case of a fixed model and if the existing curb is maintained, you can simply fix the glass cover (iWindow2, iWindow3 or iDome) on the adapter frame by using the supplied mounting set (clips).

6. Following options are possible:

- Fixed exterior sunblind
- Electric interior screen (sunblind, blackout blind or insect screen): 230 volts or Solar. The screen can be operated with a remote control as standard, but you can also operate it with your smartphone or tablet (see page 10).

Technical details of these accessories: see page 132 to 140

- Manual interior sunblind: see page 136

iWindow Flex openable with a high frame
on a polyester curb

4 OPENABLE MODEL with high frame Opening function to be installed by customer

The Skylux openable model (O) with high frame consists of the following elements:

1. Glass cover

iWindow2

An insulating iWindow2 flat roof window with double safety glazing HR++.

U_g glass = 1.0W/m²K

Choice between clear glass, opal glass or solar control glass.

or

iWindow3

An insulating iWindow3 flat roof window with triple safety glazing HR+++.

U_g glass = 0.5W/m²K

Choice between clear glass, opal glass or solar control glass.

or

iDome

- A plastic skylight of your choice (prices p. 68 to 80). Standard clear.

The price of the skylight is not included in the price in the table page 44.

- Combined with a glass cover with double safety glazing HR++; U_t : 0.55 – 0.93W/m²K.

The inner pane is made of layered glass and the outer pane of tempered glass.

2. PVC frame

High PVC frame.

3. Curb

Your current skylight curb is maintained.

Possible on the currently installed curb of choice (polyester, metal, other).

Check our technical file.

Please note: not possible on PVC curb 16/00.

4. Mounting set

Pre-mounted hinges installed on one side.

Opening function to be installed by customer.

5. Following options are possible:

- Fixed exterior sunblind
- Electric interior screen (sunblind, blackout blind or insect screen): 230 volts. The screen can be operated with a remote control as standard, but you can also operate it with your smartphone or tablet (see page 10).

Technical details of these accessories: see page 132 to 140

- Rain detector (installation by customer)
- Manual interior sunblind: see page 136

iWindow Flex openable model
with high PVC frame
and rain sensor (optional)
on a polyester curb

iDome openable model
with high PVC frame
and rain sensor (optional)
on a polyester curb

5 OPENABLE MODEL with high frame Opening function installed by Skylux Rain sensor optional

The Skylux openable model (O) with high frame consists of the following elements:

1. Glass cover

iWindow2

An insulating iWindow2 glass window with double safety glazing HR++. U_g glass = $1.0W/m^2K$
Choice between clear glass, opal glass or solar control glass.

or

iWindow3

An insulating iWindow3 glass window with triple safety glazing HR+++. U_g glass = $0.5W/m^2K$
Choice between clear glass, opal glass or solar control glass.

or

iDome

- A plastic skylight of your choice (prices p. 68 to 80). Standard clear.
The price of the skylight is not included in the price in the table page 50.
- Combined with a glass cover with double safety glazing HR++ + skylight of your choice (max. double-walled) – U_t : $0.79 - 0.93W/m^2K$.
The inner pane is made of layered glass and the outer pane of tempered glass.

2. PVC frame

High PVC frame, insulated with EPS.

Integrated 24V chain actuator for ventilation opens up to 25cm. The chain actuator(s) is (are) built into an insulating PVC frame, filled with EPS. If your skylight is provided with the optional rain sensor, it will close automatically in case of precipitation.

Operation with DuoControl: can be operated as standard with a remote control, but you can also operate it via your smartphone or tablet (see page 10).

3. Curb

Possible on a curb of choice (PVC, polyester, metal).

Check the technical file.

4. Mounting set

The opening function is pre-mounted by Skylux, as are the top hinges on the openable frame. The bottom hinges are delivered separately.

5. Following options are possible:

- Rain sensor
- Fixed exterior sunblind
- Electric interior screen (sunblind, blackout blind or insect screen): 230 volts. The screen can be operated with a remote control as standard, but you can also operate it with your smartphone or tablet (see DuoControl page 10).

Technical details of these accessories: see page 132 to 140

- Manual interior sunblind: see page 136
- The adapter frame (= optional) is a sturdy, well-insulating intermediate frame and offers many options for e.g. the Flex 2.0 on curbs made of different materials and/or with staggered daylight sizes.

The adapter frame

Replace an old skylight with a new flat skylight
WHILE PRESERVING the wooden or concrete curb

NEW

In a refurbishment project, the existing skylight curb is often preserved and only the skylight is replaced with a flat roof window or a new plastic skylight. But in many cases, you are confronted with an existing wooden or concrete curb or the daylight size of the old skylight is not the same as the new daylight size.

Our adapter frame offers the solution in these situations.

You can simply screw this frame between the existing wooden/concrete curb and the new skylight. The frame offers many features:

Compatible

The adapter frame fits various curb materials. Not only on wood but also on PVC, polyester and concrete. The adapter frame is designed to accommodate many daylight size variations of the non-Skylux curb when the skylights have a deviation of 5cm.

Easy to install

You simply screw the adapter frame onto the curb from the top. Choose the correct type of screws (not included), depending on the material of the existing curb. In addition, there is no need to add new roofing.

Weatherproof and airtight

A perfect seal is provided between the adapter frame and the curb.

Thermally efficient

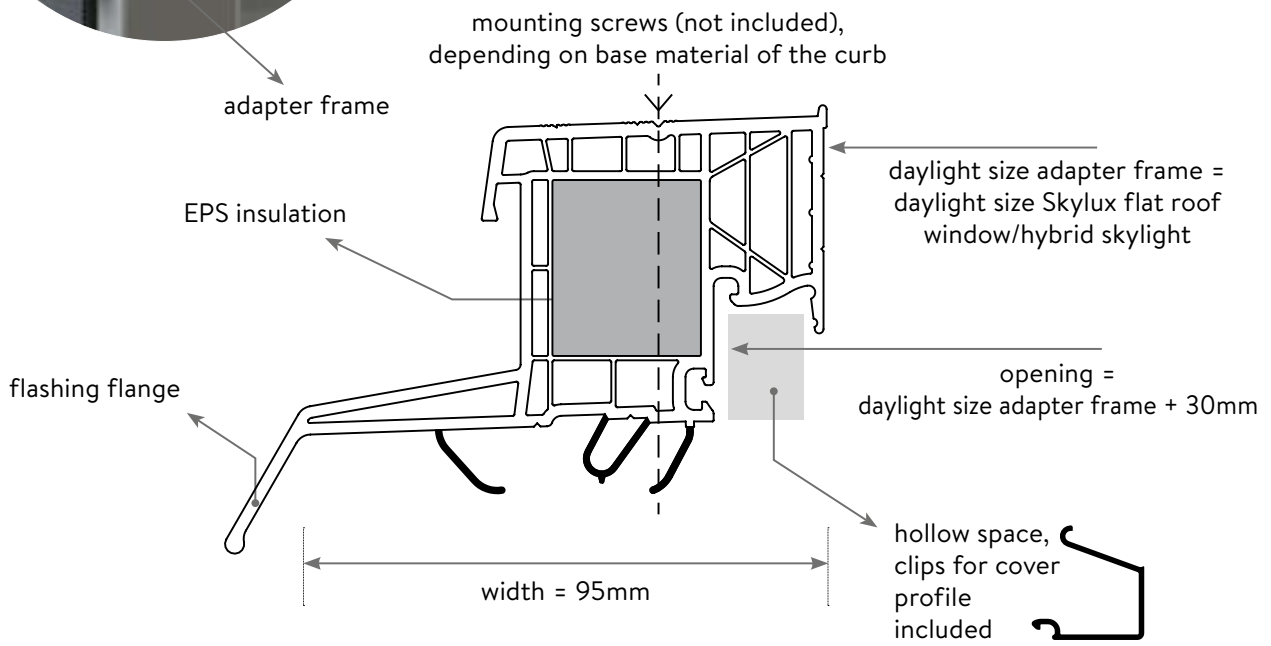

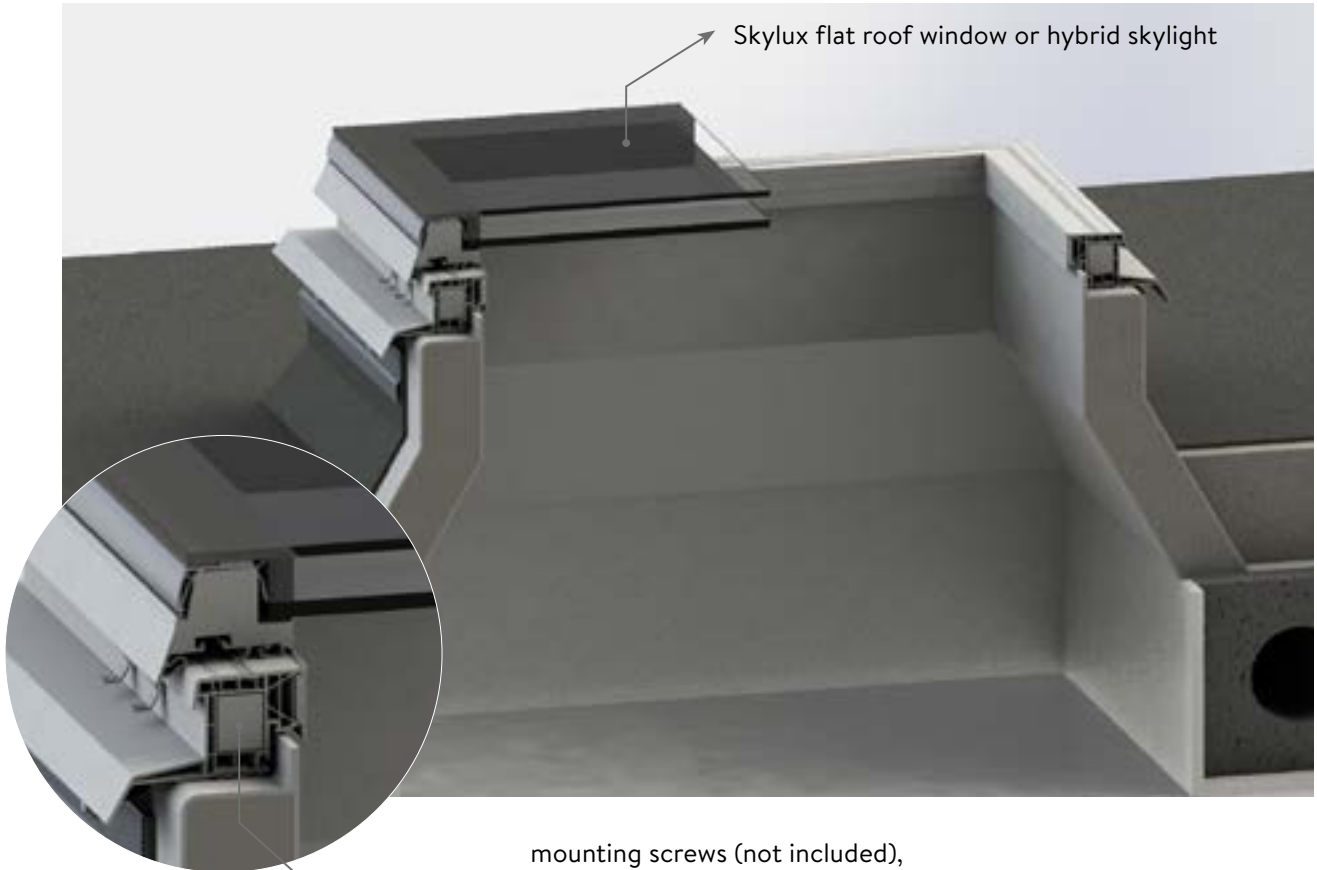

The adapter frame is equipped with insulation material that results in impressive U-values of only 0.78W/m²K.

Beautiful finish on the interior

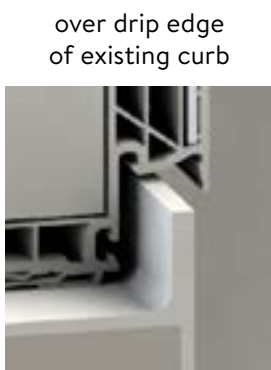

Possibility of embedding electrical cables in a cable trunking (clips for cover profile always included) or aesthetic finish with plasterboard panels in the lining groove.

The adapter frame has a CE label according to EN 1873:2014+A1:2016 in combination with a Skylux skylight.

The largest range of plastic skylights

Thanks to our permanent passion for innovation, we are happy to offer you a large range of plastic skylight products. our website www.skylux.eu gives you an online overview of size tables, technical files, built-in drawings, calculation program (U values), specifications, installation instructions and many pictures and references.

The ideal skylight in just a few clicks

Great news! Ordering a Skylux skylight is now easier than ever thanks to the Skylux configurator. The configurator allows you to quickly find out which skylight is suitable for your project. What does the configurator offer you?

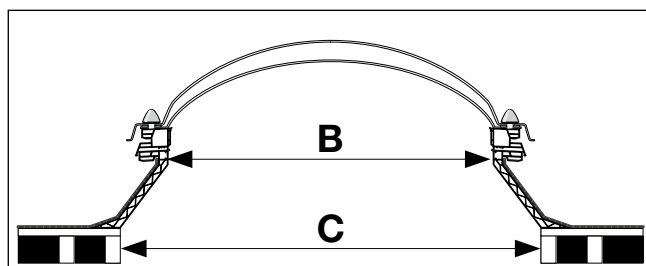

1. Create projects and configure your preferred solutions
2. Link customers to a specific project
3. Create personalised quotations
4. Print configuration sheets
5. Send your digital order – less chance of incorrect orders since the correct configuration has already been made

Visit skylux.eu and configure your Skylux skylight.

**NEW: GIVE US THE SKYLIGHT SIZE
USING THE DAYLIGHT SIZE (B) OR ROOF OPENING (C)**

To simplify the skylight order in terms of dimensions, we have decided **to work with a daylight size (B) and a roof opening (C) from now on.**

The specified dimensions in this rate are always the B dimension = the daylight size (the inner dimension/ light dimensions of both skylight, curb and frame) and given in cm, unless specified otherwise.

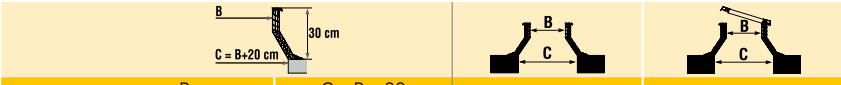

When refurbishing a skylight, the size of the existing skylight is mostly the point of reference. Please keep in mind that the overall size is 16cm longer than the daylight size (size B + 16cm = overall size) because there is a flange of 8cm around the skylight.

Ordering and calculating the correct price is easy

1. Do you want to order a **fixed skylight** (plastic skylight, hybrid skylight or glass flat roof window)?
The ordering size is the B daylight size.
2. Do you want to order an **openable skylight**?
Choose a curb with pre-mounted PVC frame. Add a skylight, an opening system and accessories of your choice.
3. You want to order a **curb**?
To order your curb, assume roof opening C.

Example of price table for fixed and openable PVC curbs 30/20 height 30cm (p. 95):

	B DAYLIGHT SIZE	C = B + 20 ROOF OPENING	FIXED	OPENABLE*
	40 x 40	60 x 60	€ 356	€ 521
	45 x 45	65 x 65	€ 377	€ 545
	50 x 50	70 x 70	€ 393	€ 567
	55 x 55	75 x 75	€ 410	€ 587
	60 x 60	80 x 80	€ 424	€ 610

↑ shape ↑ sizes ↑ prices reference to footnote

The largest range of skylights

It's not every day you buy a new skylight. That's why it's important you make the right choice. Skylux is the right place for you: we have the largest range of skylights, with no less than 180 different standard sizes and more than 10,000 possible combinations.

Our plastic skylights are available in different materials and versions, so there are numerous possible combinations. Skylux can absolutely assure you: we have the skylight you are looking for.

- Choose the material: acrylic or polycarbonate
- Choose the number of dome walls:
 - single-, double-, 3-, 4- or 5-walled
 - 6-walled (super insulating EP dome)
- Choose the shape: square, round or rectangular in spherical or pyramid shape
- Choose the style: clear, opal or Heatstop.

Discover our plastic skylights on page 62 to 80

Architectuur An Snick

Acrylic skylights

Acrylic glass (PMMA) is also called PLEXIGLAS®. This synthetic material is highly transparent and guarantees a bright daylight. The impact resistance of acrylic glass is 10 times higher than normal glass that is equally thick. Furthermore, acrylic glass is UV resistant, so there is no yellowing or loss of light transmission, even after many years.

- highly transparent
- resistant to UV light (no yellowing)

Side view	Top view	Dome walls	U _t value	Energy saving ¹
		3-walled	1.70	36.57%
		4-walled	1.28	53.73%
		5-walled	0.99	61.57%
		EP10 (6-walled)	1.30	54.10%
		3-walled	1.70	36.57%
		4-walled	1.28	53.73%
		5-walled	0.99	61.57%
		3-walled	1.70	36.57%

**DID YOU KNOW
THAT 3-WALLED
SKYLIGHTS
INSULATE UP TO
35% MORE THAN
DOUBLE-WALLED?**

¹ Energy saving compared to a double-walled skylight

Polycarbonate skylights

Looking for an unbreakable skylight? Then polycarbonate (PC) is the best choice. The impact-resistance of this synthetic material is 250 times higher than glass that is equally thick. That is why we call it an ‘armoured skylight’. The polycarbonate that we use is UV resistant, so the skylight maintains its colour and light transmission.

- The impact-resistance of this synthetic material is 250 times higher than glass that is equally thick – 1200 joules fall-through safety.
- highly transparent
- resistant to UV light (no yellowing)

Test with Skylux polycarbonate armoured skylight: the skylight does not break, but returns to its original form instead

Side view	Top view	Dome walls	U _t value	Energy saving ¹
		3-walled	1.70	36.57%
		4-walled	1.28	53.73%
		EP10 (6-walled)	1.30	54.10%
		3-walled	1.70	36.57%
		4-walled	1.28	53.73%
		3-walled	1.70	36.57%

¹ Energy saving compared to a double-walled skylight

Multi-walled skylights

Did you know that more than half of the skylights sold today are still double-walled? That is an astonishing figure, certainly if you know that double-walled skylights are far less insulating compared to multi-walled skylights.

Don't think twice

Which skylight should I choose? A question that often occurs on internet forums. People ask themselves if a double-walled skylight is sufficient for their building project. Skylux does not have to think twice: we advise the best insulation possible. The best solution is a 4- or 5-walled skylight, if the budget allows.

The more dome walls, the better the U value

Following versions are recommended, giving their U value: 4-walled ($U_t = 1.28$), 5-walled ($U_t = 0.99$), EP10 ($U_t = 1.30$) plastic skylights. The new flat roof windows iWindow2, iWindow3 and iDome (Flex) have an even better result of course.

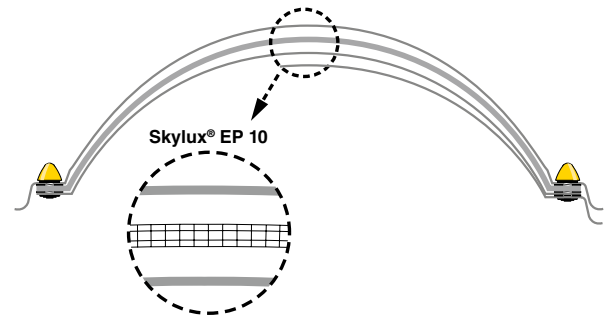

Calculate the U-value of your skylight at www.skylux.eu

EP skylights for industry

EP stands for Energy Profit. This six-walled Skylux EP10 skylight attains a U_t value of $1.3W/m^2K$. These skylights are a fully-fledged element in a roof construction in an industrial building. They are not suitable for residential homes due to the aesthetics of the interior.

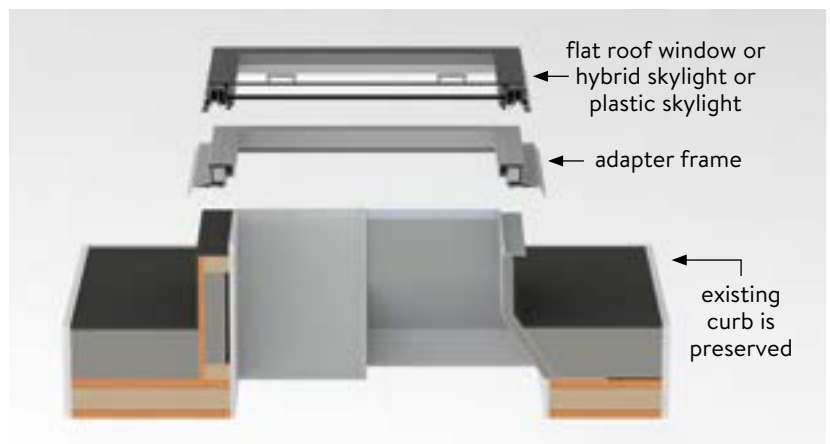

Heatstop skylight

The polycarbonate Heatstop skylight is heat-reflective thanks to the Heatstop coating, which filters out infrared rays from the sun. This reduces the heating (caused by infrared rays) under the skylight to a minimum. The polycarbonate Heatstop skylights are burglar-proof because their impact-resistance is 250 times higher than glass that is equally thick. This skylight is always opal (even when the underlying skylight shells are clear).

Easily refurbish your old skylight thanks to the adapter frame

In renovation projects, it is often a challenge to preserve the existing curb while still wanting to install a new skylight. That is why the adapter frame was developed. The frame fits seamlessly between the existing curb and the new skylight (see page 54).

Skylux iWindow3	3W	Solar control HR +++	0.50	46	33	41

U_t value U transparent or insulation value of the composed skylight (W/m²K)
 U_g value U glass or insulation value of the glazing (W/m²K)
 LT value light transmission (%)
 g value total passage of the sun-energy (%)
 Rw value acoustic value (dB)

For each combination (curb-window-skylight), the total U value can be calculated on www.skylux.eu.

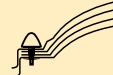

2 Outer shell height

The following overview shows the total height of the plastic skylights (top of the outermost shell).
(Please take into account a tolerance of +/- 5mm)

SPHERICAL SHAPED			SPHERICAL SHAPED		
DAYLIGHT SIZE	TOTAL HEIGHT (mm)		DAYLIGHT SIZE	TOTAL HEIGHT (mm)	
30 x 30	125		80 x 130	210

PVC curbs

Benefits

- ✓ Highly insulating
- ✓ Can be used everywhere – compatible with all types of roof membranes
- ✓ Beautifully finished
- ✓ Easy to maintain
- ✓ Lightweight and still very sturdy
- ✓ Fully recyclable
- ✓ Easy installation: The PVC curb is heat-resistant (keep the flame away from the curb of course) and remains intact while laying the roof covering
- ✓ Indoor sunblinds can be installed in any type of PVC curb

TECHNICAL DETAILS

Curbs	U _{up} value EN 1873:2014 (W/m ² K)
PVC 16/20 EP	0.89
PVC 16/00	1.00 *
PVC 20/00 EP & 20/00 EP-S	0.64
PVC 30/20	1.00 *
PVC 35/30	0.86

U_{up} value: U (upstand) or insulation value of the curb according to EN 1873:2014 and defined with EN 10077-2:2012
* according to EN 1873:2014 and defined with EN ISO 12567-2

Model

The **PVC curb is the basis for a fixed or openable plastic skylight, a hybrid or a flat roof window.** The opening system can be controlled manually or electrically for comfort ventilation. PVC curbs are also used for smoke extraction systems (Smoke and Heat Extraction) that are electrically controlled.

An openable PVC curb (for ventilation) is provided with hinges and a standard PVC frame. You can also choose to install the insulating PVC frame EP or the super insulating PVC frame EP25. The skylight is installed on this structure.

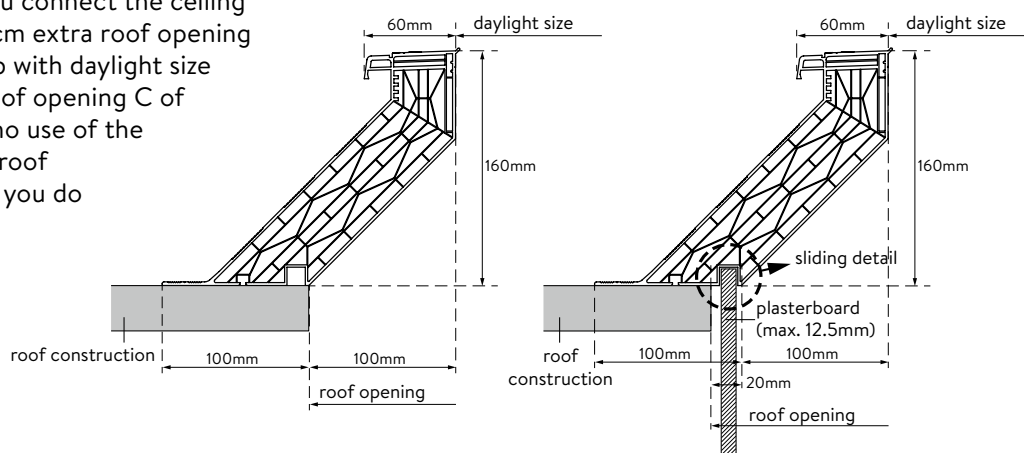

CERTIFICATIONS: Skylux has CE marking in accordance with EN 1873:2014. Certain PVC curbs are CE certified and so form a compliant component of the Smoke and Heat Extraction systems in accordance with EN12101-2 and NBN S21-208-1 and 3.
Fire certificate: European classification E (EN 11925-2) and class M1

Types

PVC curb 16/20 EP

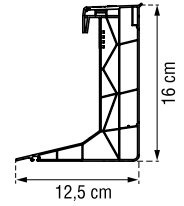

The 16/20 EP curb with an inventive interior structure is super-insulating. This curb is exceptionally strong and offers excellent performance for all traditional applications.

With the lining groove, you connect the ceiling finish seamlessly: allow 4cm extra roof opening for this. A 16/20 PVC curb with daylight size B of 100 x 100cm has a roof opening C of 120 x 120cm if you make no use of the lining groove. Allow for a roof opening of 124 x 124cm if you do make use of it.

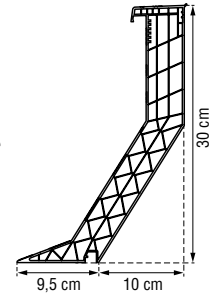

PVC curb 16/00

The 16/00 curb provides the ideal solution when replacing vertical timber or metal curbs. In a PVC 16/00 curb, a Skymax SHEV or Skylux 160° CE system can be provided, as long as a total curb height of at least 30cm is respected.

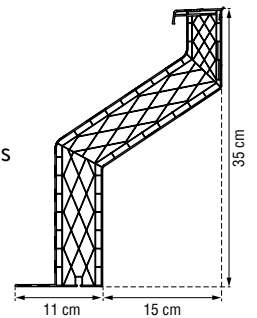

PVC curb 30/20

Thanks to its height of 30cm, the 30/20 curb offers the possibility of incorporating a package of roof insulation. The curb has also been specially designed to comply with the 30cm minimum height of the smoke and heat extraction systems without extra carpentry. In a PVC 30/20 curb, a CE certified Skymax SHEV or Skylux 160° CE system can be provided in the vertical zone of the curb.

PVC curb 35/30

A curb that's easily installed over an existing curb. The height of the vertical part below measures 150mm, which is ideal for insulation. An extra wide lower flange of 150mm is offered as an option. This lower flange increases the supporting surface and the possibilities to fix the curb. A CE compliant SHE system, Skylux 160° CE, can be provided in the vertical part of the PVC 35/30 curb.

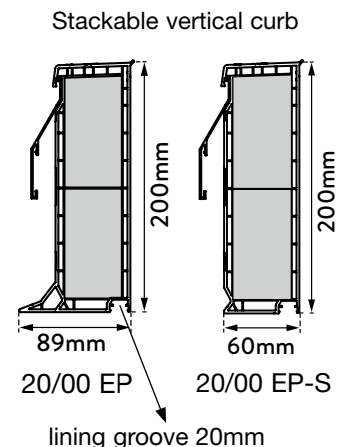

PVC curb 20/00 EP

The 20/00 EP curb has a doubled inner wall resulting in increased strength, stability and durability. This makes our curb more resistant to different weather conditions. The installation has been made easier thanks to the addition of a subtle black line on the curb that clearly indicates where the roof covering should be pulled up to when using a flashing profile. The flashing profile (aluminium profile) has 4 plastic corner profiles and is fixed with stainless steel self-tapping screws with Nyplas washers. The flashing profile allows you to easily pull up the roofing. Thanks to the lining groove of this skylight curb, you can connect the ceiling finish seamlessly. Allow 4cm extra roof opening for this. E.g. A 20/00 EP PVC curb and a 20/00 EP-S curb with a 100 x 100cm (B) daylight size has a 100 x 100cm (C) roof opening if you don't use the lining groove. Allow for a structural opening of 104 x 104cm if you do use it.

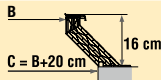

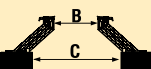

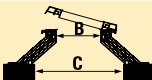

PVC curb 20/00 EP-S (S = stackable) – raised curb without flange

The 20/00 EP-S curb (S = stackable) has the same composition as the 20/00 EP curb, but is stackable as it has no bottom flange. You can easily stack this curb on top of an existing curb and thus create a higher skylight. The existing curb therefore does not need to be removed. This curb also has a flashing profile to easily pull up the roof covering.

If you want a 40/00 EP curb, you can stack a 20/00 EP-S on the 20/00 EP curb, together with an installation set. This is possible at an additional cost of 21 euros.

Polyester curbs

Benefits

- ✓ Strong thanks to their composite composition and still very light
- ✓ Can be used everywhere
- ✓ Stable and highly insulating
- ✓ Easy installation and easy maintenance
- ✓ Various shapes are possible: square, rectangular or round
- ✓ Indoor sunblinds can be installed in any type of square or rectangular polyester curb.

TECHNICAL DETAILS

Curbs	U _{up} value EN 1873:2014 (W/m ² K)
Polyester PO15/25	1.32
Polyester PO15/20 - PO30/20 - PO50/20	0.80
Polyester PO30 EP60	0.35
Polyester PO30 EP100	0.23
Polyester PO30/00 - PO50/00	0.80

U_{up} value: U (upstand) or insulation value of the curb according to EN 1873:2014 and defined with EN 10077-2:2012
*according to EN 1873:2014 and defined with EN ISO 12567-2

Model

A polyester curb for ventilation is fitted with hinges and a frame of your choice (the standard PVC frame, the insulating PVC EP frame or the super-insulating PVC EP25 frame). A round polyester frame can be used for round curbs. The skylight is installed on this structure.

CE EN 1873 CERTIFICATIONS: Skylux has CE marking in accordance with EN 1873:2014. Certain polyester curbs are CE certified and so form a compliant component of the Smoke and Heat Extraction systems in accordance with EN12101-2 and NBN S21 -208-1 and -3.
Fire certificate: European classification E (EN 11925-2)

Types

Polyester curb Benelux model

The BENELUX model (PO 15/25), the standard polyester curb has a difference of 25cm from daylight to roof opening. The fixed height is 15 cm. They are available in square, rectangular or round models.

Polyester curb German model

The “GERMAN” polyester curbs are available in splayed, round and vertical models. These curbs have a better insulation value than the Benelux models.

The splayed model has a difference of 20cm from daylight size to roof opening and is available in three heights: 15cm (PO 15/20), 30cm (PO 30/20) and 50cm (PO 50/20).

The 30cm curbs are available with different insulation thicknesses, whereby PO30/20 EP60 and PO30/20 EP 100 are super insulating. These curbs are provided on the outside with a 60 or 100mm thick additional encased PUR insulation.

The vertical curbs are available in 2 heights: 30cm (PO 30/00) and 50cm (PO 50/00).

Other possibilities with polyester curbs:

Polyester curb with ventilation grid (PO 30/20)

Polyester ventilation grid with X-Pelair (PO 50/20)

with ventilation grid

ventilation curb

Polyester curb with bevelled side

The polyester curb with bevelled side is 50cm high and has a pitch of 5°. This means that the necessary roof pitch is achieved thanks to the curb.

	DAYLIGHT SIZE	GROSS PRICE
■	60 x 60	€ 895

Metal curbs

Benefits

- ✓ Sturdy, non-flammable and suitable for industrial applications
- ✓ Roof opening and daylight size are the same as the curb is always vertical.
- ✓ An indoor sunblind can be installed in every square or rectangular metal curb.
- ✓ Available in heights 15cm to 50cm
- ✓ Can be combined with all types of opening frames.

TECHNICAL DETAILS

Curbs	U _{up} value EN 1873:2014 (W/m ² K)
Metal M15-M20-M25-M30-M40-M50 (insulated)	0.84
Metal M15 EP-M20 EP-M25 EP-M30 EP-M40 EP-M50 EP (insulated)	0.51
Metal M15-M20-M25-M30-M40-M50 (not insulated) (round curbs are not insulated)	> 100

U_{up} value: U (upstand) or insulation value of the curb according to EN 1873:2014 and defined with EN 10077-2:2012
*according to EN 1873:2014 and defined with EN ISO 12567-2

Model

The metal curb can be fitted with a fixed or openable plastic skylight. The opening system can be controlled manually or electrically for comfort ventilation. Metal curbs are also used for smoke extraction systems (SHEV) that can be controlled electrically or pneumatically.

CERTIFICATIONS: Skylux has CE marking in accordance with EN 1873:2014. Certain metal curbs are CE certified and so form a compliant component of the Smoke and Heat Extraction systems in accordance with EN12101-2 and NBN S21-208-1 and -3.

Types

The square and rectangular metal curbs are provided with insulation, and are available in two models:

- The standard model is provided with 40mm rockwool insulation (U value: 0.84W/m².K).
- The EP model is provided with 50mm PUR insulation (U value: 0.51W/m².K).

The insulation comes with a bituminised glass fleece for fitting to the roof covering. The curb flange can, if necessary, provide a limited thermal bridge. The round curbs are not insulated. Round polyester curbs may offer an alternative here.

The square and rectangular metal curbs can be provided with a welded-in anti-burglar grid.

metal curb with burglar proof grid

Daylight cylinders

A daylight cylinder provides a proper finish between your interior ceiling and the curb after insulation. Skylux offers round, square or rectangular PVC daylight cylinders. If you are using the daylight cylinder, you do not need to provide any more plasterboard.

Ventilation frames

To install a skylight quickly and easily, we have developed a pre-mounted insulating PVC frame that is attached to the curb with stainless hinges. No more drilling, measuring or adjusting. Just screw on the skylight and you will have a nice and neat result. The operating system is also pre-mounted: a manual or electric spindle for inaccessible places or for more comfort.

Ventilation frames

PVC frames

PVC frames are used for assembling openable skylights. These PVC frames have the important advantage that they insulate properly, thereby significantly reducing the chance of condensation.

The PVC frames have built-in metal reinforcement profiles. This enables brackets and any other assembly components to be firmly secured to the frame.

The top hinges are pre-mounted. The other accessories, such as the assembly kit with bottom hinges and the opening system, are not included in the price of the frame and must be ordered separately 119-120).

The Skylux PVC frames have a co-extruded wind and rain seal. When closing the frame, the seal is properly pressed against the curb. This closes everything off completely.

The PVC frames need no further finish.

STANDARD PVC FRAME	PVC FRAME EP	PVC FRAME EP25
<ul style="list-style-type: none"> ✓ standard ✓ properly insulating 	<ul style="list-style-type: none"> ✓ extra internal structure ✓ superior stability ✓ extremely good insulation 	<ul style="list-style-type: none"> ✓ PVC FRAME EP + 6-walled 25mm polycarbonate opal sheet ✓ extremely good insulation

CERTIFICATES: Skylux has CE marking in accordance with EN 1873.
Fire certificate: European classification E (EN 11-925-2)

Round polyester frames

Round polyester frames – that are pre-mounted – are used to assemble round openable skylights and are suitable for round polyester or metal curbs. Polyester round frames are insulating. For opening systems, there is a choice between a manual or an electric spindle. For round skylights, a chain driven actuator and roof access are not possible. The other accessories, such as the assembly kit with bottom hinges and opening system, are not included (page 119-120).

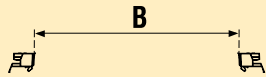

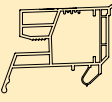

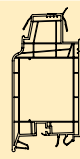

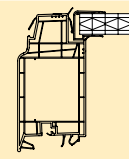

TECHNICAL DETAILS

Frames	U _e value EN 1873:2014 (W/m ² K)

Roof access skylights

The pre-assembled Skylux roof access skylight provides access to the roof or the rooftop terrace, and is also suitable for ventilation. At the same time, maximum use is made of the access opening (free opening up to 3.12m²).

There are two models: the manual and the electric roof access skylight, both of which are pre-assembled units consisting of a Skylux curb and a standard PVC frame.

CERTIFICATES: The Skylux plastic skylight has CE marking in accordance with EN 1873.

Fire certificate:

- acrylic shells: European classification E (EN 13501-1)
- polycarbonate shells: European classification B, s1, d0 (EN 13501-1)
- PVC curb: European classification E (EN 11925-2) and class M1

Manual roof access skylights

page 122-127

- ✓ pre-assembled set of curb and frame
- ✓ with two gas springs to aid with opening
- ✓ opening angle $\pm 75^\circ$
- ✓ lockable handle, to lock the skylight in the closed position (optional: lockable handle with key)

Electric roof access skylights

page 128-131

- ✓ pre-assembled set of curb and frame
- ✓ opening angle with 90° setting
- ✓ actuator (single or double)
- ✓ transformer 230V - 24V DC 5A
- ✓ with remote control and holder
- ✓ lateral positioning of the actuator(s)

Manual roof access skylight

The Skylux roof access is always pre-mounted.

The price consists of:

1. a PVC curb
2. a pre-mounted standard PVC frame
3. 2 gas springs with supports*
4. one (▲) or two (▲▲) handle(s)
5. mounting accessories

Following elements must be ordered separately:

6. a dome of your choice. See p. 68 to 80

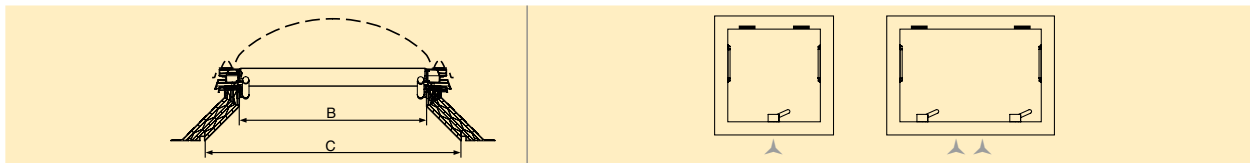

Price list manual roof access system (dome not included)

Accessories

Fixed exterior sunblind for flat roof windows

Thanks to a simple clip system, you can easily install the high-quality exterior sunblind on your Skylux flat roof window. The sunblind prevents the glass from heating up and reduces the amount of solar heat entering your home. As a result, you can enjoy a continuous pleasant temperature indoors. Removing the sunblind is also a breeze. You can choose to take off the sunblind during the cold winter months.

The Skylux® fixed exterior sunblind is compatible with iWindow2 and iWindow3, not with iDome.

- ✓ G value: 0.11
- ✓ Excellent protection against sunlight
- ✓ Modern and solid design
- ✓ Easy to install and to remove
- ✓ Saves energy
- ✓ Reduces contact noise from rain and hail
- ✓ Highly resistant against wind

Please note: always mention the type of your flat roof window when ordering (iWindow2 or iWindow3) as the provided clips for easy installation are different for each type.

● for iWindow2 available from stock Other on request

These delivery times are for fixed exterior sunblinds for iWindow flat roof windows with a low PVC frame. If you would like an exterior sunblind for a flat roof window with a high PVC frame, then always take into account a delivery time of 20 working days.

Electric screen sunblind powered by 230 volts or Solar Electric screen blackout blind powered by 230 volts or Solar Electric screen insect screen powered by 230 volts or Solar

The Skylux stand-alone electric screen is available as an insect screen, a sunblind or a blackout blind for both fixed and openable flat roof windows and plastic skylights.

- A blackout blind can darken your room completely. The material of the blind and its closed profile system are perfect to keep out any daylight.
- A flat roof window allows for plenty of sunlight and warmth indoors. Ideal during colder days, but it might be unpleasant in the summer. Provide your window with a decent sunblind to protect your home from harsh sunlight and the summer heat.
- The insect screen blocks insects from getting into your home if your skylight is open.

In case of a fixed configuration (plastic skylight, iWindow, iDome) the screen is installed in the daylight size of the curb afterwards. The system is controlled with DuoControl by using a remote control or an app on your smartphone. The electrically powered version is connected to the mains electricity supply. A 230V power supply is therefore needed where the flat roof window or skylight will be installed.

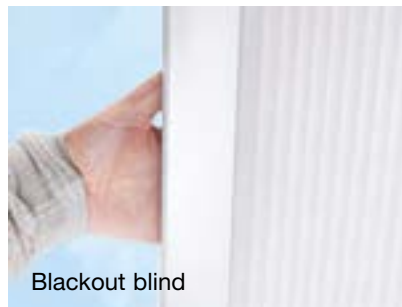

If a 230V power supply is not possible, the Solar version (powered by solar energy) can be used instead for the iWindow or iDome. (Solar is not suitable for plastic skylights.)

For an openable flat roof window in glass (iWindow and iDome range), Skylux already pre-mounts the screen. The system is also operated with a remote control or with an app on your smartphone.

If you decide to install a screen afterwards, a 230V screen can be offered. Please take into account a second control system or control via app.

The screen with Solar is not possible with the Flex 2.0 versions.

If you choose an openable plastic skylight with a manual or an electric spindle or if you work with a mounted actuator on a low frame, then you need to install the – 230 volts version – in the roof opening. The Solar version is not recommended in this case.

Electric screen 230 volts or Solar Insect screen, sunblind or blackout blind

- Sunblind in stock, blackout blind and insect screen 20 working days
- Ready for delivery within 20 working days

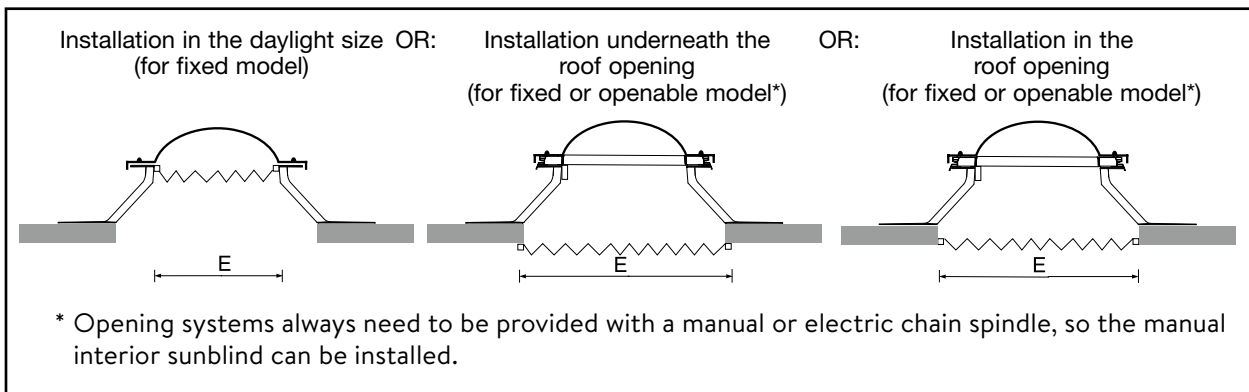

Manual interior sunblind

The manual interior sunblind is available for fixed and openable flat roof windows and skylights. It can be installed in the daylight size of the curb, in or under the roof opening. The sunblind is operated manually from the inside.

- ✓ light- and heat-reflecting thanks to the double fabric
- ✓ can also be partially opened
- ✓ complete assembly kit (not pre-assembled), with screws and assembly manual
- ✓ an operation bar must be ordered separately
- ✓ opening systems always need to be provided with a manual or electric chain spindle, so the manual interior sunblind can be installed. Not possible for roof access skylights or SHE systems.

Attention! When choosing the correct size, please take the size E into consideration.

Insect screen for plastic skylights

The insect screen allows you to open the skylight and let air in, without letting insects in! The harmonica-shaped insect screen, incorporated in the skylight window (only PVC) is invisible when the skylight is closed. The insect screen is not suitable for round skylights, roof access skylights, SHE skylights, flat roof windows or hybrid skylights.

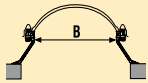

✓ provided with hook tape, for fast securing or removal (e.g. cleaning or roof access).

- ✓ roll of one-sided adhesive sealing tape (type Velcro) is fixed on the three sides of the upper flange of the skylight curb. The hinging part of the curb remains clear. A one-sided adhesive sealing is also fixed on the underside of the PVC frame. (not on the hinge side)
- ✓ complete assembly kit (not pre-assembled), with assembly manual

Safety grid

Fortunately, roof safety is an increasingly important topic for the contractor and the installer. Perhaps your roof is used as a terrace or some persons need frequent access to the roof for maintenance. Skylux has a proven anti-fall through system which can be used on all Skylux curbs. The Skylux safety grid has a GS BAU18 certificate.

Smoke and heat extraction, an absolute must for each company

Intense heat and toxic smoke caused by fires can be extremely dangerous. The smoke in the building can spread rapidly, hampering evacuation procedures.

Safe
access

firemen

Lowering the
temperature
saves the
building
construction

A smoke-free
passage for a
safe and quick
evacuation

Low risk of
flashovers

Limited
smoke
damage

Fast and safe evacuation

Current legislation demands smoke and heat extraction in certain buildings. They must be provided with openable roof elements. Skylux has developed several SHE systems to evacuate smoke and heat through the roof. Creating smoke-free areas facilitates the building evacuation. It also provides better visibility for firefighters.

All our SHE systems comply 100% with the European and Belgian SHE standards. These high-quality systems guarantee high reliability.

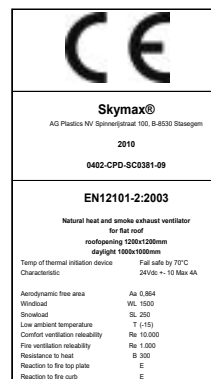

Free daylight and fresh air ventilation

The Skylux® SHE skylights offer an additional feature: they bring abundant daylight into your building, allow for fresh air ventilation and provide access to the roof.

Our CE certification ensures complete peace of mind

All SHE systems should have CE certification. It guarantees that the system is secure and operates optimally in all circumstances.

To obtain the CE label, the SHE system is subjected to severe tests according to the European standard EN 12101-2:2003 and regular audits (Factory Production Control). The test results are evaluated by an independent association and are mentioned on the CE label.

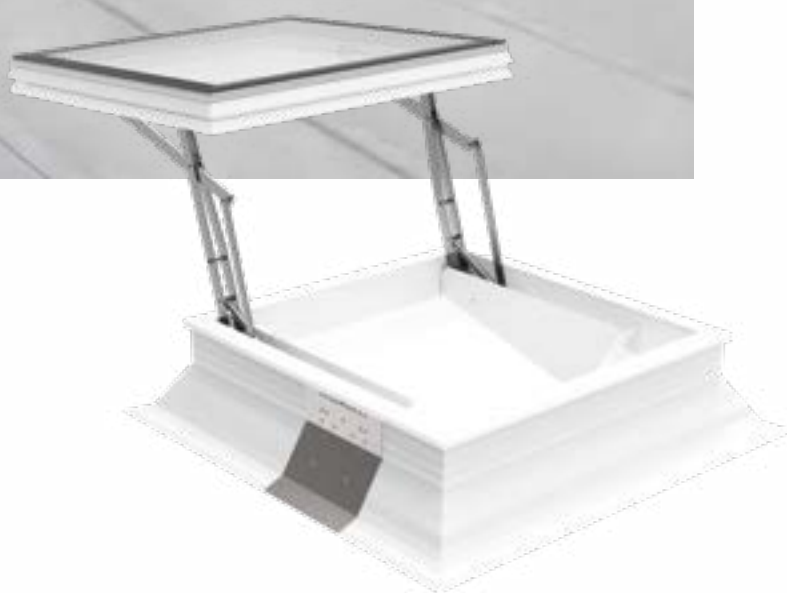

The CE certification on all SHE products indicates that the product meets the mandatory standards within the European Economic Area.

SKYMAX[®] CE

The Skylux SHE system for a safe stairwell

CE-approved
in accordance with
EN 12101-2:2003
and conform to
NBN S21-208-3:2018

General description

The Skymax CE is a smoke and heat extraction system specifically designed for ventilation openings in indoor stairwells. It consists of two sideway installed actuators, creating a free opening that enables smoke extraction and/or roof access.

Skymax CE must always be ordered as a complete set.

Features

- ✓ Free roof access
- ✓ Rw value to 40dB
- ✓ CE certification
- ✓ U_t value possible to $0.51\text{W/m}^2\text{K}$
- ✓ Easy installation

Useful information

- ✓ The ventilation opening is operated with priority.
- ✓ The control unit can be installed on the ground floor.
- ✓ Different curb combinations are possible.
- ✓ Can be finished with a plastic skylight or flat roof window.

Don't forget the corresponding control unit (page 152)

Skymax CE

A SHE skylight Skymax CE is always pre-assembled.

The price consists of:

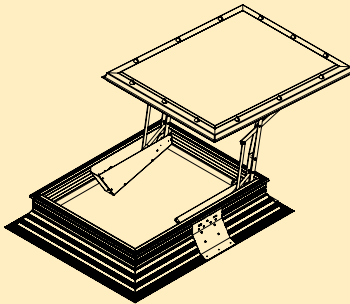

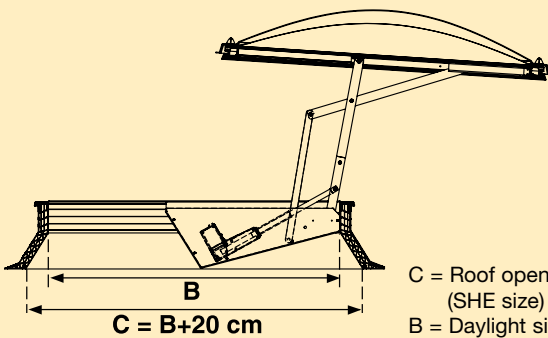

1. A PVC curb type 30/20, 16/00 or 20/00 EP (with supporting plates) or metal curb M30 with a scissor system and a pre-assembled PVC frame of your choice

ATTENTION: we do not offer a double PVC curb in combination with Skymax CE because it is not CE compliant.

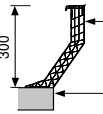

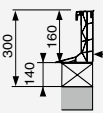

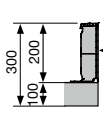

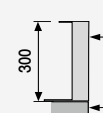

Following elements must be ordered separately:

2. A skylight of your choice, except for Skylux iWindow2 and 3. See p. 68 to 80
For iDome compositions: maximum a double-walled skylight. Please consult our technical file.
3. A control unit Skycom CE Skymax and accessories. See p. 152

The SKYMAX CE consists of:

**C = Roof opening (SHE size)
B = Daylight size**

SKYLUX® 160° CE

A skylight for smoke and heat extraction

CE-approved
in accordance with
EN 12101-2:2003
and conform to
NBN S21-208*

General description

The Skylux 160° CE opens 160° and consist of one or two actuators for fresh air ventilation or roof access. The positive safety is guaranteed by the temperature sensor in the Skycom CE Slave control unit, which opens the skylight automatically at a temperature of 70°C. You can also opt for a priority fire push button, which is only to be operated by firemen. More information about the corresponding control units can be found on page 152.

Skylux 160° CE LM electric

A SHE dome Skylux 160° CE LM is always premounted.

The price consists of:

1. A PVC curb type 16/00 or 30/20 or 35/30, polyester PO 30/20 or PO 50/20 or metal curb M30
2. Two or four supporting plates for PVC curbs
3. A single ↑ or double ↑↑ LM motor premounted, fixing set included
4. A premounted frame

Following elements must be ordered separately:

5. A dome of your choice (max four-walled or EP25 with double-walled dome). See p. 68 to 80
6. A control panel Skycom CE Master, Skycom CE Slave and accessories (see p. 152)
7. A set of 2 spoilers for an increased aerodynamic value (option)

Skylux 160° CE LM electric with glass

A SHE dome Skylux 160° CE LM is always pre-mounted.

The price consists of:

1. a PVC curb type 16/00 or 30/20 or 35/30, polyester PO 30/20 or PO 50/20 or metal curb M30
2. two or four supporting plates for PVC curbs
3. a single ↑ or double ↑↑ LM pre-mounted actuator, fixing set included
4. an insulated frame with glass skylight iWindow2, iWindow3 or iDome of your choice. Opal or solar control glass also available on request.

Following elements must be ordered separately:

5. a single-walled dome of your choice for iDome. See p. 68 to 80
6. a control panel Skycom CE, Skycom CE Slave and accessories (see p. 152)
7. a set of 2 spoilers for an increased aerodynamic value (option)

Skycom CE & Skymax control units

The Skymax CE and the Skylux® 160° CE skylights are operated by a Skycom Master CE control unit and one or more Skycom Slave CE control units. The Master control unit with operation on the front panel is specially designed for these SHE systems. It's provided with different connection possibilities. The control units have an autonomy of at least 72 hours thanks to the built-in batteries. The electronic micro components save energy and make sure all functions can be found in one compact casing. Installation is quick and easy and there is a safety system against wiring mistakes. Cables and batteries are constantly monitored. The number of Skycom Masters CE and Skycom Slaves CE is calculated per project.

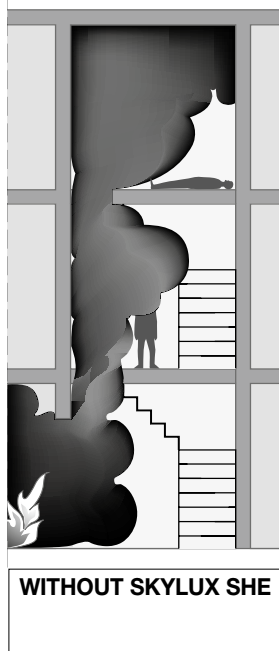

Skylux offers 3 types of control units:

- Skycom CE Master (art. 30975 + 80743)
This base control unit has an integrated operation. The maximum output current is 8A.
- Skycom CE Slave (art. 30977)
This extension control unit is combined with the Skycom CE Master. Each Skycom CE Slave is provided with an integrated temperature sensor in case positive safety (fail safe) is required (NBN S 21-208.1). In some regions, fail safe is not required and the settings can be adjusted to meet the local demands.
- Skycom CE Skymax (art. 48479 conform to NBN S21-208-3:2018)
This control unit is only suitable for the Skymax CE. It's always combined with one external priority switch for the Skycom CE Skymax (art. 32569).

All Skycom CE control units meet the requirements of the prEN 12.101.9 and EN 12.101-10 standards.

The number of actuators, power consumption, cable lengths and cable sections determine which control unit must be used.

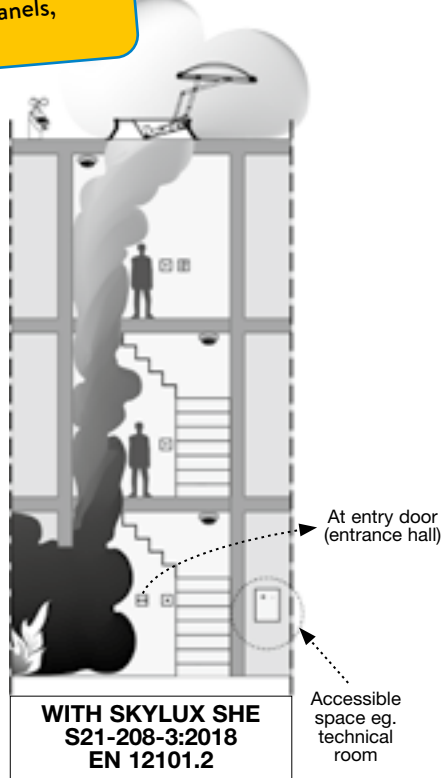

The roof access function is an additional asset for access for maintenance of solar panels, heat pumps and ventilation.

- smoke spreads in the building
- heat increases
- evacuation and intervention are hampered

VICTIMS SUFFOCATE!

- building construction is damaged
- extinguishing inside is impossible

- smoke and heat are extracted and are visible from outside
- quick evacuation

VICTIMS CAN ESCAPE!

- building construction is saved

Central control unit

This central control unit distinguishes itself specially by its easy installation and operation.

Errors in the system are mentioned on the front panel. The Skycom CE, Skycom CE Slave & Skycom CE Skymax central control units meet the demands of the norm EN 12.101-9 and 12.101-10.

	Ventilation and roof access button	(art. 25773) € 121.90
	Wind and rain detector	(art. 25774) € 928.10

Accessories

for our Skycom CE control units

Priority switch

The priority switch has been developed for the Skycom CE control unit, to operate the smoke and heat extraction systems. The switch overrides the control unit alarm so that the smoke-hatch skylights can be opened or closed by the firemen.

It is advisable to install this switch if the Skycom CE control unit cannot be installed in the entrance hall of a building. Thanks to the presence of a priority switch in the entrance hall, firemen can easily operate the SHE system. The technical facilities room is recommended as an alternative location for the control unit.

Wind and rain detection

Consisting of a wind wheel and a rain sensor, the wind and rain detector alerts the Skycom CE control unit which then closes the SHE skylight(s). The rain detector must be installed in an inclined position in order for the rainwater to drain away. The sensor is equipped with a relay with 'potential free contact'. The operation of the wind and rain sensor is controlled by the Skycom CE unit. This means that if the skylight has closed due to rain, a fire alarm will cause the control unit to override the sensor and open the skylight.

Temperature detection

If the temperature of the interior exceeds 75°C, the alarm of the Skycom CE Master control unit will be triggered and it will automatically open the SHE system.

This external temperature sensor must be fixed horizontally at the bottom of the finished roof.

Ventilation push button

This open/close switch is used to manually operate a 24V smoke and heat extraction system.

The switch is delivered with a box to use for the installation. Be sure to put the springs behind both fire push buttons. Dimensions: 65 x 65 x 45mm (width x height x depth).

More information about the wiring can be found in the Skycom CE mounting instructions.

Smoke detector

The smoke detector has been developed for the Skycom CE control unit and is used to operate the smoke and heat extraction systems.

This sensor must be fixed horizontally, at the bottom of the finished roof.

Fire push button

The fire push button has been developed for the Skycom CE control unit, which is used to operate the smoke and heat extraction systems.

To trigger the alarm and activate the SHE system, you must break the glass and push the red button.

To test the system, simply open the hatch and press the red button.

Skylux, 10-year guarantee!

Quality service goes with quality products. Therefore, we offer a 10-year guarantee on all Skylux products (a 2-year guarantee on electric components, as required by European law). The only thing you need to do is register your skylight. Mail to info@skylux.be within one month after the installation.

Maintenance tips for your Skylux skylight

Acrylic glass has a self-cleaning effect and requires little maintenance. Please do not use any cleaning products or solvents because they can damage the skylight. We advise using the Skylux-cleaner for the maintenance of your plastic skylight and the PVC-cleaner for the PVC frames and curbs.

Make your skylight last even longer thanks to these tips:

- The skylight attachments and the sealing tape must be checked once a year.
- Clean the skylight only with water and non-aggressive soap and rinse thoroughly with water after cleaning.
- Please do not clean the skylights with products that are not suited for acrylic or polycarbonate. For example:

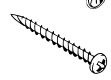

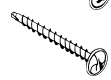

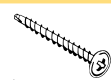

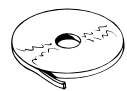

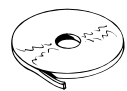

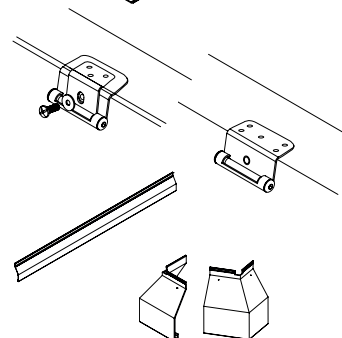

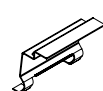

no abrasives or aggressive products like silicone, wood protection products, adhesives, unsuitable sealing tape, chemical fumes, etc. These products can cause damage and will result into the loss of guarantee.

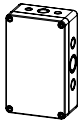

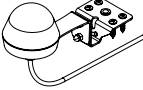

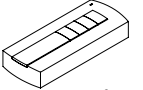

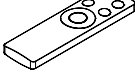

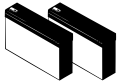

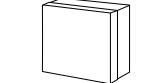

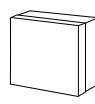

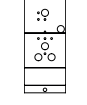

- Remove tar stains only with turpentine and rinse thoroughly with water.
- In case of scratches: please contact the supplier and ask for a suitable polishing product.
- Do not use any insecticides on the skylight.
- Metal and polyester curbs must be provided with an extra finish.

You can find more information on www.skylux.eu in the section FAQ.

Spare parts

DESCRIPTION	ARTICLE N°	PRICE	
Parts of the dome cap			
Dome cap	yellow	21937	€ 0.35
	red	21939	€ 0.35
	white	21942	€ 0.35
Installation nut black		27039	€ 0.40
Installation bolt grey 14mm (SW)		23446	€ 0.38
Installation bolt grey 20mm (DW & 3W)		23447	€ 0.40
Installation bolt grey 26mm (3W PC & EP10)		24474	€ 0.40
Installation bolt black 32mm (4W & EP16)		28251	€ 0.40
Installation bolt grey 37mm (5W)		30756	€ 0.40
Rubber sealing EPDM		17494	€ 0.20
Spacer ring EPDM		39394	€ 0.20
Burglarproof clip in bichromate steel		22422	€ 0.80
clips iWindow/iDome for PVC curb and adapterframe (set of 4 pcs)		41681	€ 12.00
Mounting set iWindow/iDome on curb ≠ PVC			
- for fixed iWindow/iDome (set of 4)	112960	€ 149.75	
- for fixed iWindow/iDome (set of 6)	112961	€ 219.62	
- for openable iWindow/iDome (set of 2)	112962	€ 65.84	
- for openable iWindow/iDome (set of 3)	112963	€ 93.76	
Alu flashing for PVC curb 1070mm	59693	€ 14.77	
Alu flashing for PVC curb 2070mm	59709	€ 28.57	
Alu flashing for PVC curb 3070mm	78866	€ 42.37	
Angle piece for alu flashing	59717	€ 5.60	
Screw 5.5 x 32 for alu flashing	23963	€ 1.17	
Sealing tape			
Double sided adhesive tape 12 x 2mm between dome shells. Roll 50m (white)	49933	€ 45.50 /roll	
One sided adhesive tape 25 x 6mm under the dome. Roll 10m (white)	73285	€ 14.00 /roll	
One sided adhesive tape 25 x 12mm (SOFT) under the dome. Roll 7.5m (white)	51477	€ 35.25 /roll	
One sided adhesive tape 12 x 4mm (alu frames) Rolls of 20m (grey)	5109	€ 7.60 /roll	
Self-adhesive tape for actuator in opening iDome or iWindow	46544	€ 16.88 /pc	
Screws and bolts			
Universal screw 5.0 x 62 INOX	21857	€ 0.60	
Universal oneway screw 5.0 x 62 INOX	21858	€ 0.60	
HILO PVC-screw 40mm galvanised (for quick assembly)	5114	€ 0.49	
HILO PVC-screw 25mm stainless steel (fixation top hinge)	72130	€ 0.36	
One-way woodscrew M5 x 50	5116	€ 0.58	
Renovation plug aluminum	27018	€ 2.00	

DESCRIPTION	ARTICLE N°	PRICE	
Spare parts for opening iDome or iWindow			
Power supply 24V/3A	44567	€ 588.00	     
Power supply 24V/6A	44568	€ 775.00	
Optical rain sensor (set) from 2023 The rain sensor can only be ordered if an existing rain sensor is defective.	110852	€ 375.00	
Coupling plate for spindle iDome / iWindow	39558	€ 8.00	
Remote control for iDome / iWindow RF < 04/2024	39556	€ 85.00	
Remote control for iDome / iWindow / Flex 2.0 DuoControl - IoT > 04/2024	110751	€ 85.00	
Skymax and Skycom CE			
Battery for Skycom CE control panel (always in set of 2 pieces)	31021	€ 76.00 x2	        
Battery for Skycom control panel (always in set of 2 pieces)	5394	€ 60.31 x2	
Breakable glass for fire push button and control unit CE	30391	€ 23.00	
Limit switch Lip5 (single actuator)	28662	€ 372.00	
Limit switch Lip6 (double actuator)	26811	€ 412.00	
PCB for Skycom > 2020	73678	€ 536.00	
Front control panel Skycom CE	78195	€ 81.00	
Actuator stop Skylux 160° CE	28169	€ 53.00	
Actuator stop Skymax / LM 70-110	35360	€ 64.00	

Maintenance

Acrylic is self-cleaning and requires little maintenance. Do not use detergents or solvents as these can negatively affect the skylight. We recommend the Skylux cleaner for the maintenance of your plastic skylight and the PVC cleaner for your PVC frames and curbs.

MAINTENANCE PRODUCTS		PRICE
Synthetic cleaner (500ml) for domes	art. 4750	€ 22.00
PVC cleaner (500ml) for PVCu curbs and frames (is NOT to be used to clean domes)	art. 24644	€ 27.58
Polishing cream (125g) for acrylic domes (should NOT be used to treat polycarbonate domes)	art. 45675	€ 23.54

Conditions

- Prices are VAT excluded, in euros.
- Free delivery in Benelux, France and Germany.
- This price list nullifies all previous price lists.
- We are not responsible for possible print or calculation mistakes.
- The skylight dome prices are valid for the standard dome shell combinations that are mentioned in the price list.
- We explicitly refer to our general terms and conditions, technical file and mounting instructions.
