3. Using the App

After the camera is added into the App, follow steps below to do settings and control it.

Control the camera

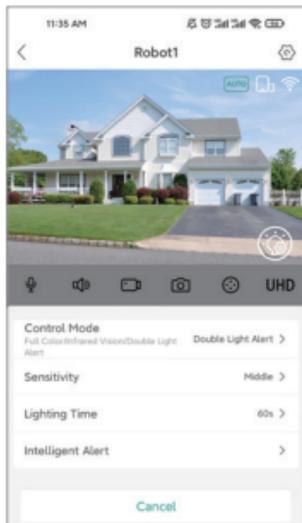

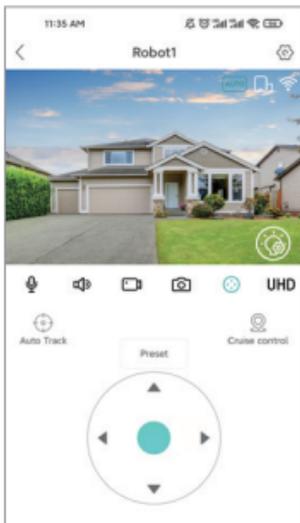

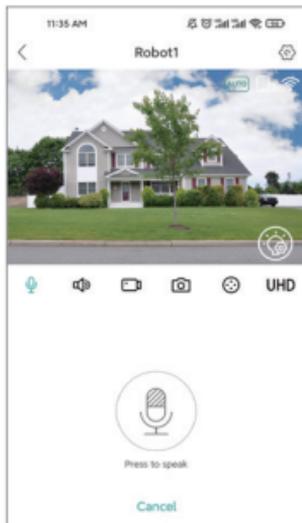

Click the video image of the camera and then you can do two way intercom, video record, snapshot, PTZ control and playback the video recorded.

Click to , you can long press the microphone icon to speak. Click the  to keep it on meanwhile to do real-time two-way voice intercom.

Click to , it will count the seconds of the recorded video clips that you have recorded on mobile phone. Click to , you can do snapshot. You can find the picture snapshot and the video clips you made on your phone "Mobile Storage".

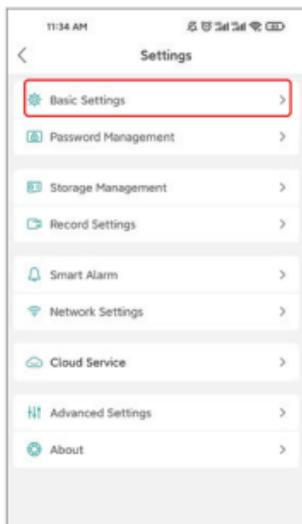

Click to , you can control the camera Pan / Tilt rotation.

Click to Light Alarm or the icon , you can set up the Light Mode, Sensitivity, Lighting Time and Intelligent Alert.

Settings

In the settings, you can do basic setting, like name the device, language and so on. You can change the password, do alarm settings, open or close the alarm push, check storage and network settings.

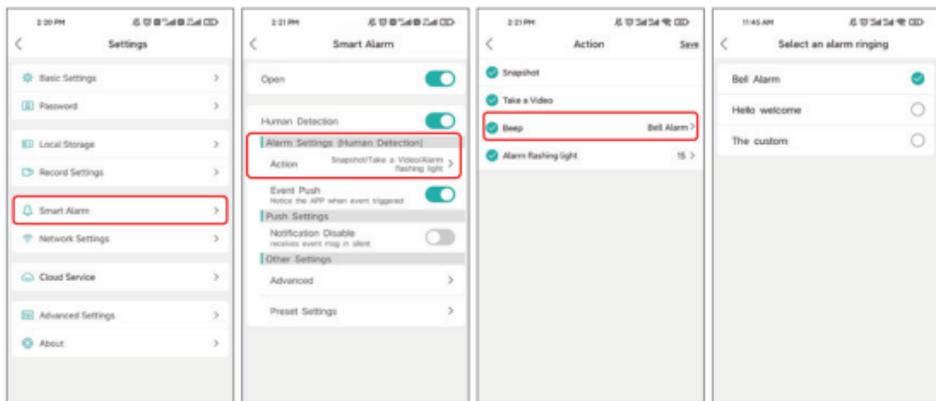

4. Unique features

Alarm Voice Alert

In the Smart Alarm, click the "Alarm Action". You can set what the camera does after alarms.

It can snapshot, take a video, set up the Alarm flashing light and at the same time it will beep or play voice prompt. You can click "Beep" to choose what prompt voice it will play after alarms. You can choose "Bell Alarm", "Hello, welcome!" or custom other alarm voice. As default this function is closed. Please do remember save it after.

AI Smart Features

On the live video, click the  icon, you can find the "Intelligent Alert". There are smart AI functions, like "Human Detection", "Show Traces" "Cordon" and "Alert Area" Settings.

◆ Human Detection

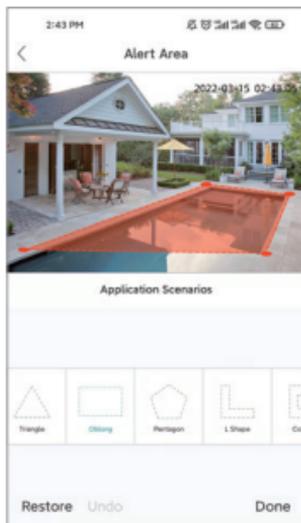

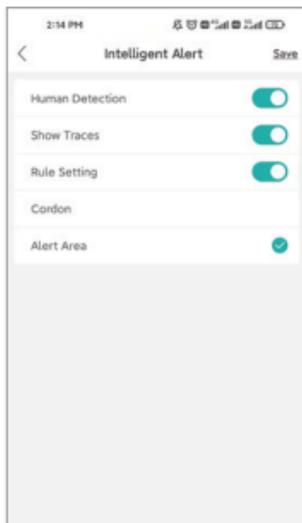

This camera support human detection, which is a smarter way to detect human motion with AI tech and much more accurate than motion detection. Human Detection can reduce the false alarm caused by pets activity, insect fly, light change or things move.

◆ Show Traces

When this function is on, there will be a trace frame, when people are in the live video and it will follow the people when they are moving.

◆ Cordon and Alert Area

There are two ways to set the protection zones. One is cordon, the other is alert area. For the cordon, you can put a cordon in the video image and when people cross it, it will alarm. You can set different alert directions for the cordon. You can draw different shapes for the zone that you want to protect in the live video image.

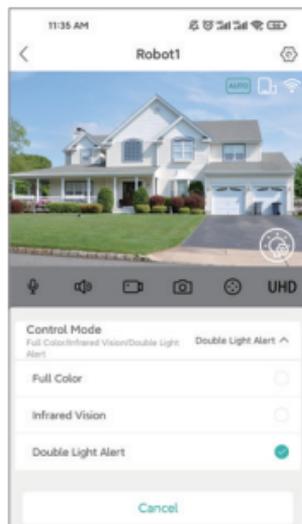

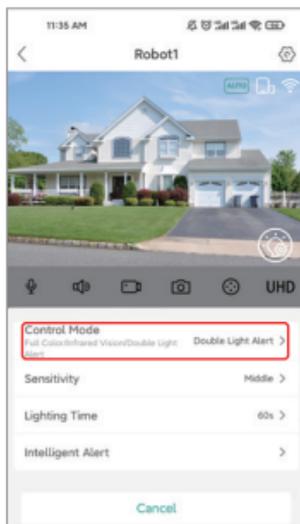

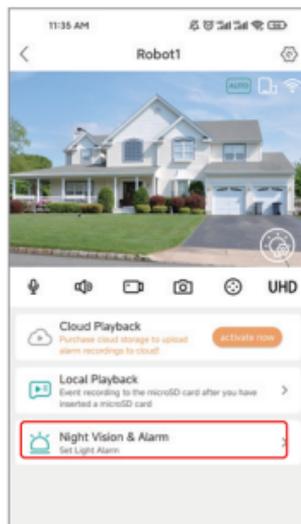

Flood Light

On the live video, click the  icon or Night Vision & Alarm, it will show the Light Control Mode for the camera. There are three types of lights in the camera, IR light, white light and red-blue light, and they have three modes.

Full Color: The white light will be on all the time in the night.

Infrared Vision: Only IR light will be on in the night. And the white light will be off day and night.

Double Light Alert: The IR light will be on in the night and the white light will be turned on in the night after human detection. (It is the default mode of the camera.)

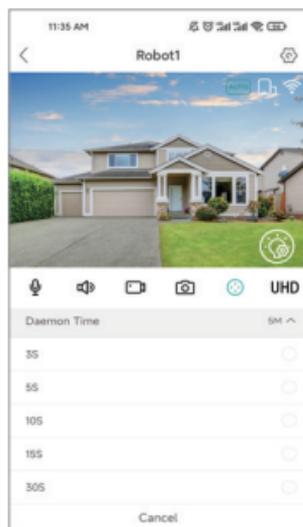

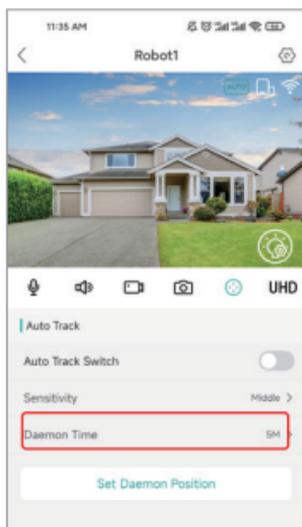

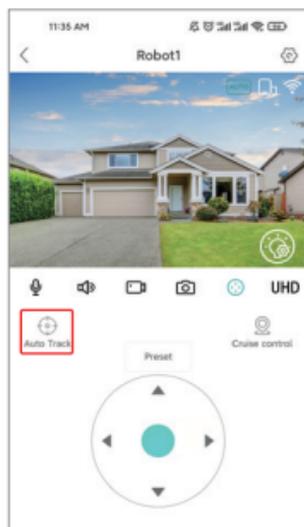

Daemon Position

On the live video, click the ☺ icon, then click Auto Track and turn on the Auto Track Switch. You can rotate the camera horizontally and vertically via live image, move the camera lens to the place where you want to focus on, then click Set Daemon Position.

When somebody move, the camera will automatically track the body. When the human disappears from the camera's field of view, the camera will automatically rotate back to the daemon position you set, monitor the position you focus on at all times.

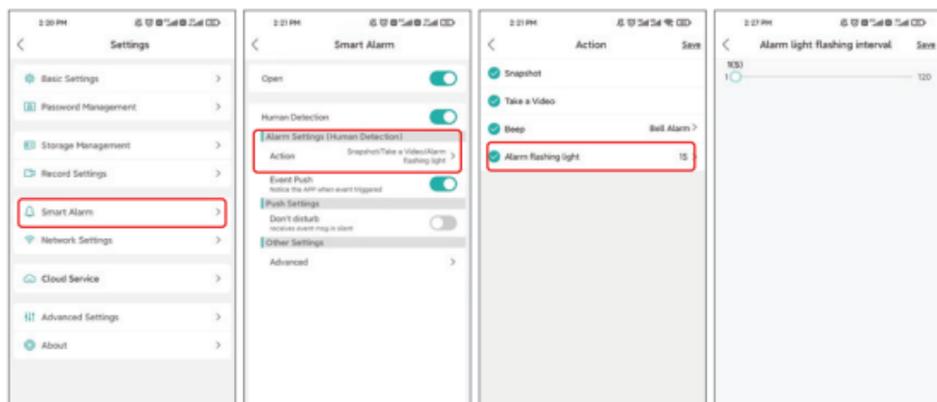

You can also adjust the Daemon Time to set up when the camera rotates back to the daemon position after human leave out the camera's field of view.

Red Blue Flashing Light Alert

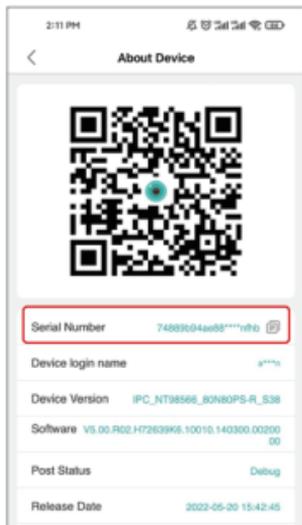

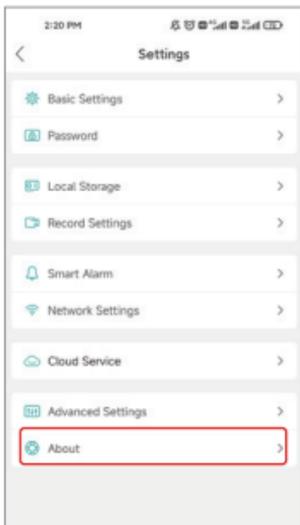

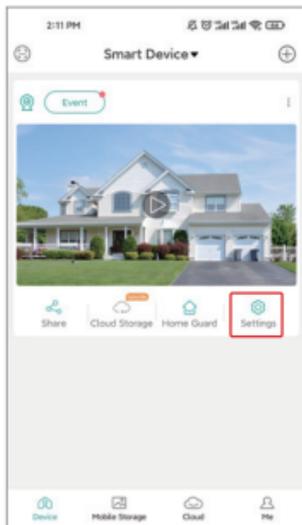

When human detected, the red light and blue light will flash alternately to scare off intruders. It is the default mode of the camera, If you want to disable this function, please connect the camera to iCsee APP, click the  icon into the Setting, click "Smart Alarm">>"Action", cancel the option "Alarm flashing light" and save setting. Click the "Alarm flashing light", you can adjust the timeline to adjust the alarm light flashing interval.

 **Notice:** only some models of our cameras have this function.

View on PC Software

Firstly, please click Settings>>About on App iCsee to find the camera serial number, default password is null if you have not changed password.

Click here to download PC Software:

<https://www.techage.com/pages/download>

Click Device Manager, you can see it has 2 ways to add camera:

1. Click IPV4/IPV6 to search the camera which you have already connected to same router with your PC.
2. Click Cloud Add, enter camera's serial number and password.

The image shows a login form titled 'VMS'. It has two input fields: 'UserName:' with the value 'admin' and 'Password:' with masked characters '•••••'. Below the password field is a checkbox labeled 'Remember Password' which is checked. At the bottom, there are two buttons: 'SIGNIN' and 'CANCEL'.
