

Polyform Inflation Instructions

Please find below a step by step guide on how to inflate our

range of fenders. We recommend using the pump and yellow adapter supplied on our website under the accessories column, although other pumps can be used.

Pump available through BFD

This type of pump can also be used providing it has the range of nozzles

The yellow adapter shown or any other similar adapter which fits snugly in the valve housing can be used to inflate the fender, a football needle would not be suitable.

How to inflate

Unscrew the valve cap

screw the valve cap back on

Insert the yellow adapter into the valve housing and inflate with air. Do not over inflate and you should still be able to depress the buoys slightly when squeezed.

Further details can be found on our website www.BoatFendersDirect.com under the user guide section.
