

Sowden SoftBrewCoffee

Incorporating simplicity with technology, the Sowden SoftBrew stainless steel filter is etched with thousands of holes to keep the coffee grounds out of your cup, while letting through all the flavour. The unique design allows you to use a roast profile, grind and brewing time that tastes best to you.

1. Place the stainless steel micro filter inside the jug.
2. Add your preferred amount of coffee. One Sowden scoop per cup is recommended, but you can vary according to taste.
3. Add hot water, just off the boil, to the MAX line.
4. Stir the ground coffee to ensure all grinds are saturated.
5. Place the lid on the filter. Wait for a minimum of 4 minutes before pouring. You can increase the brew time for a stronger coffee.
6. Ready to serve. Do not remove the filter, just pour your brewed coffee straight into the cup.

NOTE: The beauty of the Sowden SoftBrew Coffee maker is the ability to change different variables to get the brew exactly how you want it. To change brew strength, you can alter the grind size, amount of coffee and brew time.
