

# Remote Cable Adaptor (RCA)

Remote Meter/Display Universal Adaptor Kit

Trace Inverter to Magnum Inverter

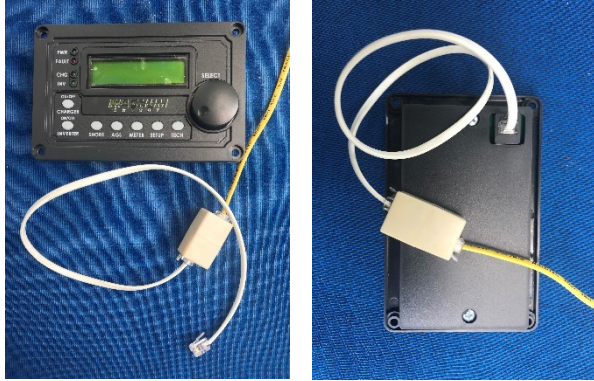

Remove the OLD cable from the back of the RC7 remote. (phone cord, usually yellow) Plug the adaptor into the old cable on one end. Plug the other end into the NEW RC50 remote.

## PROBLEM

When replacing older Inverters used in RV's, boats, trucks, off-grid cabins, etc. with a new inverter, the remote meter/display unit must also be replaced.

The wire/cable that was originally installed with the older inverters will usually NOT work with a new inverter.

This cable needs to be replaced with a new cable or use the Remote Cable Adaptor Kit (RCA) to allow the older cable to be adapted (Converted) to work with a newer style remote meter.

Once the remote cable adaptor (RCA) is plugged in, refer to the new RC50 remote control instructions to finish setting up your NEW inverter and RC50 remote control installation.

### SOLUTION

No need to replace the old cable! The Remote Cable Adapter (RCA) simply plugs into either end (whichever is most convenient) of the old cable (at the inverter or at the meter) & converts it for use of newer controls and meter displays.

Caution!!! May not be compatible with all newer or older inverter.
