## Transistor Plus

### I. Power on and off

1. Locate the power button on the top left side of the watch face. Long press to turn your watch on. If the watch doesn't come on, you didn't break it, it still needs to be charged.

2. Power down the watch with a short press of the down button. This brings up the OFF interface. Switch to YES and long press the power button to turn the watch OFF.

1

### II. Install the WearHealth Mobile App

1. Installing the WearHealth Mobile App will allow your watch and your phone to talk to one another. This will help you take advantage of the many benefits your new watch offers.  
2. Search "WearHealth" in the app store on your mobile device. Make sure your device has enough space for the app and then install it.

Android  
Google Play

iOS  
APP Store

### III. Pair Your Watch with your Phone

1. Launch your WearHealth app on your mobile phone. Enable Bluetooth on your phone and search for available devices to pair. Pair your phone with the device "BOLT" and your watch is ready.

2

### IV. Start Use

1. Once your device is paired its time to get to work! Start counting steps, analyzing your heart rate, and monitoring how many calories you're burning each day. You can even analyze your sleep.  
2. Access your data and notifications quickly from the watch's display screen.

### V. Charging Your Watch

1. Our watches utilize magnetic contact charging technology. Place the magnetic charger on the back of the watch and plug your USB charging port into your laptop or into a compatible wall charger and it will charge right up!

3

### VI. FAQs

#### My mobile phone cannot pair with the watch.

Your Bluetooth must be enabled to search for devices to pair with. Check your Bluetooth settings on your mobile phone to assure you have turned this function on.

Assure the watch and phone are charged. Your watch cannot pair with a dead phone, no matter how cool that watch might be.

If you still cannot pair your device after Bluetooth is enabled, your watch is charged, and turned on, please contact our customer service team.

#### My Bluetooth connection fails at random.

Depending on the state of your phone the Bluetooth status can be affected. If you are powering the phone up or restarting it, that can affect pairing. Some mobile phone services also affect Bluetooth performance.

If you experience this problem, simply turn your Bluetooth off and back on. Now you can search for your watch.

#### How do I recover the watches default settings?

After your mobile device and your watch have been paired, select Administration of my Bracelet in the WearHealth App. From here you can select Recover Default Settings.

#### How do I keep my watch updated?

If your watch and mobile phone have been paired, open the WearHealth App. In the Administration of my Bracelet selection you will find an option for Firmware Update. Select this to update.
