# Security Warning

1. Please change the password of your camera regularly, using a combination of numbers, letters and special characters.
2. We recommend that you regularly update your camera to the latest available software and firmware versions to help ensure the best experience for your camera.

## 1 Overview

FOSCAM Outdoor FHD IP Camera is an integrated wireless IP Camera with a color CMOS sensor enabling viewing in High Definition resolution. It combines a high quality digital video camera, with a powerful web server, to bring clear video to your desktop from anywhere on your local network or over the Internet.

The IP Camera supports the industry-standard H.264 compression technology, drastically reducing file sizes and conserving valuable network bandwidth.

The IP Camera is based on the TCP / IP standard. There is a WEB server inside which could support Internet Explorer. Therefore the management and maintenance of your device is simplified by using the network to achieve the remote configuration and start-up.

The camera is designed for outdoor surveillance applications such as courtyards, supermarket, and school. Controlling the IP camera and managing images are simplified by using the provided web interface across the network utilizing wireless connectivity.

FOSCAM provides Phone apps for Android and iPhone users, please search and install app on app Store and Google Play for iOS and Android devices, then you can view your camera anywhere, anytime on your smart mobile devices.

### 1.1 Key Features

- ◆ Standard H.264 video compression algorithm to satisfy the transmission of high definition video in narrow bandwidth network
- ◆ 2.0 Mega-Pixel (FI9902P, FI9912P, G2) / 4.0 Mega-Pixel (G4P G4)
- ◆ Supports IE / Firefox / Google / Safari browser or any other standard browsers
- ◆ Supports WPA and WPA2 Encryption
- ◆ Wi-Fi compliant with wireless standards IEEE 802.11b / g / n
- ◆ IR LEDs for IR range up to 20m / 66ft Supports image snapshot
- ◆ Supports dual-stream
- ◆ Supports IR-Cut and the filter change automatically
- ◆ Embedded FOSCAM DDNS (dynamic domain name service) Service
- ◆ Supports remote viewing & record from anywhere anytime
- ◆ Multi-level users management with password protection

- ◆ Motion detection alert via email or upload image to FTP
- ◆ Supporting Third Party Domain name
- ◆ Providing Phone apps for Android and iPhone users
- ◆ Supports multiple network protocols: HTTP / HTTPS / RTSP / TCP / IP / UDP / FTP / DHCP / DDNS / UPNP / ONVIF
- ◆ Providing Central Management Software to manage or monitor multi-cameras
- ◆ 6X Digital Zoom
- ◆ Supports High Dynamic Range

## 1.2 Read before Use

Please first verify that all contents received are complete according to the Package Contents listed below. Before the Network Camera is installed, please carefully read and follow the instructions in the Quick Setup Guide to avoid damage due to faulty assembly and installation. This also ensures the product is used properly as intended.

## 1.3 Packing Contents

● IP Camera * 1	● Quick Setup Guide * 1
● DC Power Supply * 1	
● Wi-Fi Antenna * 1	

## 1.4 Physical Description

### 1.4.1 Front Panel

**1 WIFI Antenna:** Wireless Antenna

---

**2 Infrared LED:** 30 IR LEDs

**3 LENS:** All Glasses Material

## 1.4.2 Interface

### 1 LAN

10/100M adaptive Ethernet interface. Through this interface, IP camera can be connected with various network devices, such as hub, router, etc.

### 2 Audio input interface

The jack is used to plug external input device such as sound pick up device directly. Here microphone cannot directly insert to the interface, it must connect to adapter first.

### 3 Audio output interface

The jack is used to plug external output device such as loud speaker directly. Here microphone cannot directly insert to the interface, it must connect to adapter first.

### 4 Power Interface

Connect the external power adapter, request for 12V / 1A power.

### 5 Reset button

Press and hold on the reset button for 5 seconds. Releasing the reset button, the password will back to the factory default administrator password. The default administrator user is admin with no password.

## 1.4.3 Bottom View

There are up to two labels located at the bottom of the camera, this is an important feature of original Foscam cameras. If your camera does not have labels, it may be a clone. Cloned Foscam cameras can not use original firmware and are not eligible for technical services.

---

## 1.5 SD Card Management

The record files of the IPC can be stored in the SD Card.

You need open the IP Camera, then plug the SD card into SD card slot inside the IP Camera.

When you plug in the SD card during the camera work process, please reboot the camera again, or else the SD Card may be cannot work well.

Insert Micro SD Card in the location shown below.

## 1.6 Wall Installation

Fixate the camera on your preferred location and use screws to mount it. We have provided screws in the Packaging.

**NOTE:** Ensure that the rain or water will not reach the connector ports at the end of the pig tail wiring. These connectors are not weather-resistant.

The cable of an outdoor camera should, from the position where the cable is divided into several cables, be

fitted dry. Install the cable into a waterproof junction box (1) or bring the cable indoors (2).

---

## 2 Access the IP Camera

### 2.1 Hardware Connection & Software Installation

1. Mount the antenna and make it stand vertically .
2. Connect the camera to the LAN network (Router or Switch) via network cable.
3. Connect the power adapter to the camera.
4. Download the “Equipment Search Tool” from [foscam.com/tools](http://foscam.com/tools) to your computer, then access the camera directly., the icon shows as below:

#### NOTES:

- If your computer (Windows OS) supports autorun function, you can find the corresponding file in the opened control panel.

## 2.2 Access the Camera In LAN

### 2.2.1 Wired Connection

The camera supports HTTP and HTTPS protocols, you can access the camera in two ways.

#### (1) Http:// LAN IP + Http Port No.

The default HTTP port NO. is 88. Double click the Search Tool icon to run, and it should find the camera's IP address automatically after you plug in the network cable.

Camera Name	IP Address	Device ID	Type
Anonymous	Http://192.168.1.105:88	A0E270F49D29	IPC

Double click the IP address of the camera; the camera login page should be open in your default browser.

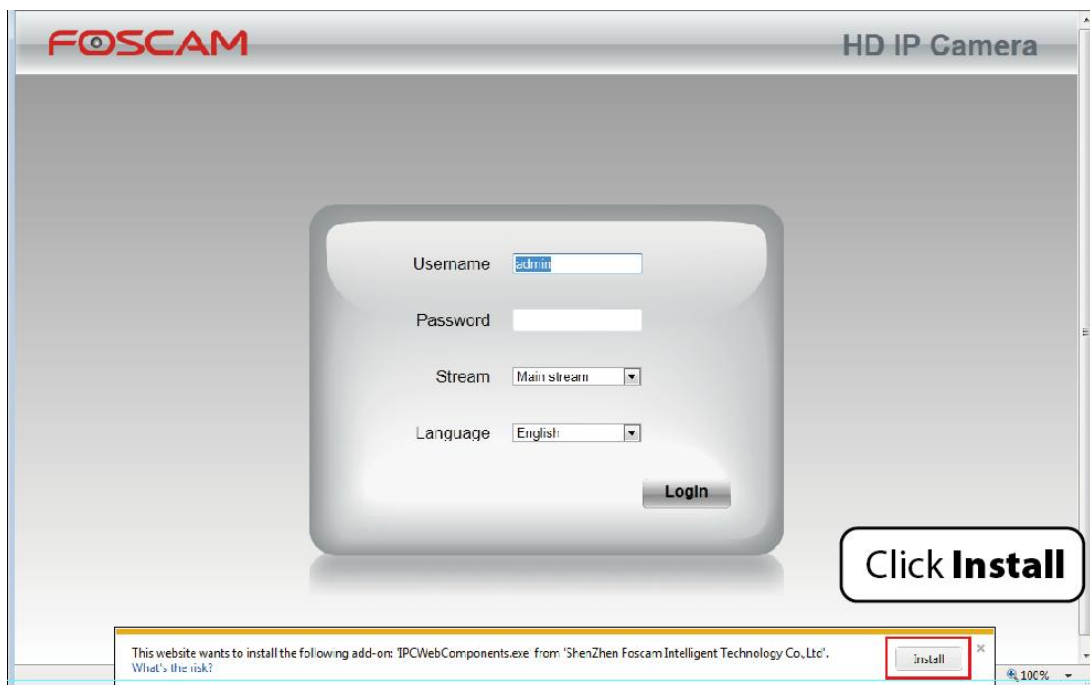

**(2) Https:// LAN IP + Https Port no.**

The default HTTPS port NO. is 443. You can use the URL to access the camera: https:// LAN IP + HTTPS port NO.

Go to **Settings - Network - Port** panel, you can see and change the HTTP and HTTPS port NO.

Save Refresh	
HTTP Port	88
HTTPS Port	443
ONVIF Port	65533

**NOTE:** When logging in for the first time, you will need to download and install the add-on.

**2.2.2 Wireless Connection**

Only some models support EZLink wireless connection , please refer to the Quick Setup Guide.

## 2.3 Access the Camera in WAN

### 2.3.1 Static IP Addresses

Users who have static IP addresses do not need to set DDNS service settings for remote access. When you have finished connecting the camera using the LAN IP address and port forwarding, you can access the camera directly from the Internet using the WAN IP address and port number.

### How to Obtain the WAN IP address from a public website ?

To obtain your WAN IP address, enter the following URL in your browser: <http://www.whatismyip.com>. The webpage at this address will show you the current WAN IP.

### Access your IP Camera from the Internet

You can access the IP Camera from the Internet (remote access). Enter the WAN IP address and port number in your standard browser. For example, you would enter `http:// 183.37.28.254:88`

### 2.3.2 Remote Access

If you want to access your camera by web browser outside of your LAN, you need to configure following configurations.

1. Choose **Settings** on the top of the camera web page, then go to the **Network > IP Configuration** section on the left side of the screen, then uncheck the Obtain IP DHCP.

**IP Configuration**

Obtain IP From DHCP

IP Address	192.168.1.10
Subnet Mask	255.255.255.0
Gateway	192.168.1.1
Primary DNS Server	211.162.78.1
Secondary DNS Server	211.162.78.3

**IP Address:** Set this in the same subnet as your computer , or keep it as default.  
**Subnet Mask:** Keep it as default.  
**Gateway and DNS Server:** Set it to the IP address of your router.

2. Enable UPnP and DDNS in the camera's settings page. We recommend you to use the DDNS by factory default.

**UPnP**

Enable UPnP  Yes

Select Yes and click Save.

**DDNS**

Enable DDNS

Manufacturer's DDNS

Manufacturer's DDNS	
---------------------	--

Third Party DDNS

DDNS Server	
Domain	

Click Enable DDNS and click Save.  
 The content in the Manufacture's DDNS column is the domain name of your camera.

3. You can see the port of your camera here. If you want to set Remote Access for several cameras on the same network, you will need to change the HTTPS port for each camera.

**Port**

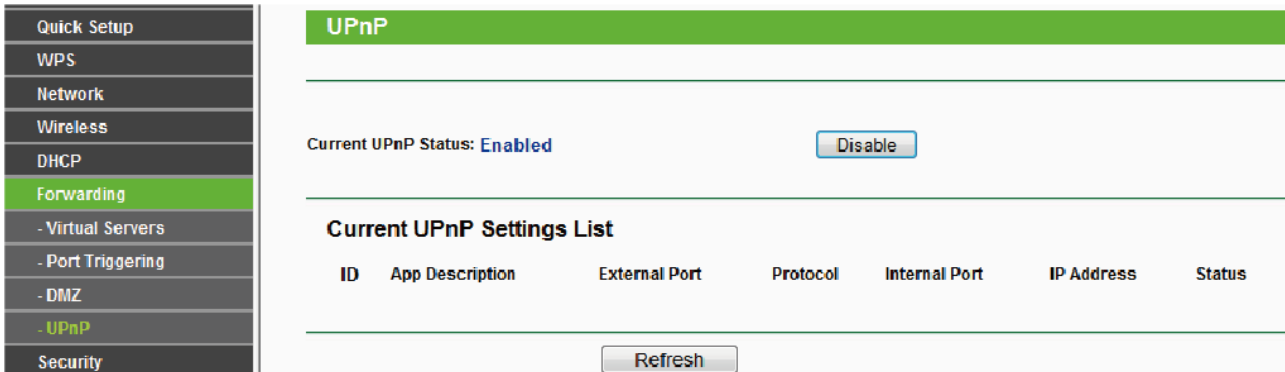

HTTP Port	88
HTTPS Port	443
ONVIF Port	888
RTSP port	554

4. If the UPnP of the router has been enable, you do not need to perform following steps. Otherwise, you need to select one of the following methods to configure port forwarding on your router. For these steps, we will

be using the TP-LINK brand wireless router as an example.

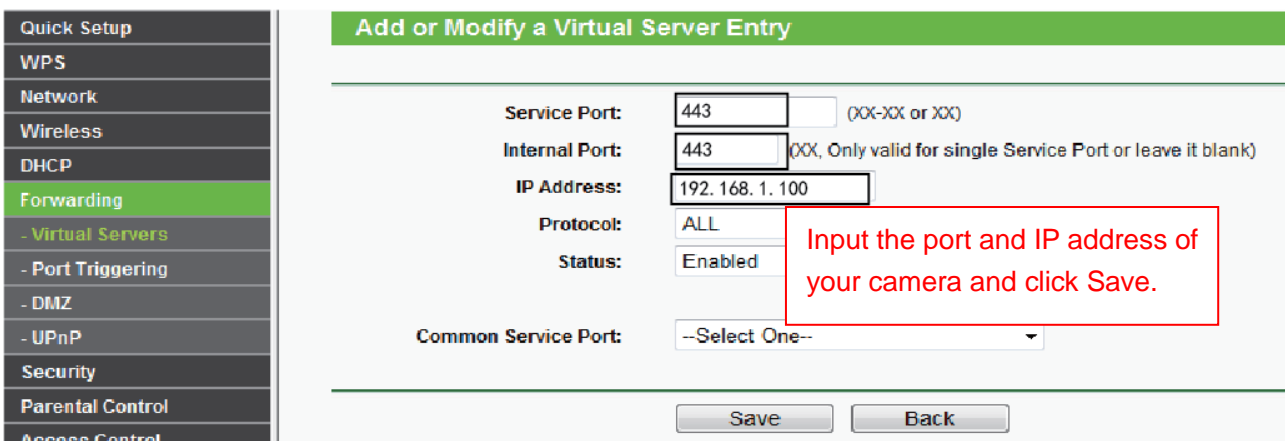

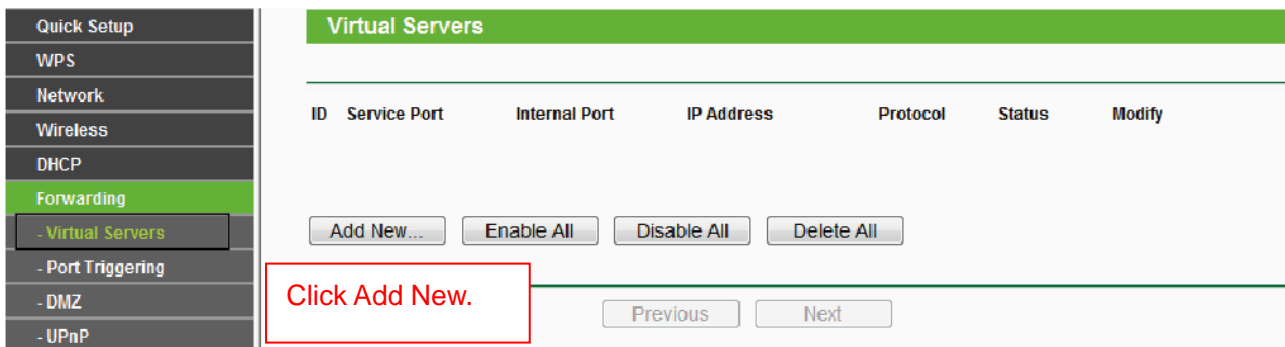

- **If there is a UPnP function in your router:**

Choose **Forwarding > UPnP**, make sure that the Current UPnP Status is Enabled.

- **If there is no UPnP function in your router:**

You need to manually add port (HTTPS port) forwarding, refer to the following steps. You need go to the **Forwarding > Virtual Servers** panel for setup.

5. Now you can access your IP camera by https://domain name: HTTPS port via the Internet.

## 2.4 Using the VLC Player

This camera supports RTSP streaming, here you can view the camera using VLC player.

**RTSP URL** [rtsp:// \[user\\_name\]\[:password\]@IP:port number/videosream](rtsp://[user_name][:password]@IP:port number/videosream)

The part in the square brackets may be omitted.

**user name & password:**

The user name and password to access the camera. This part can be omitted.

**IP:** WAN or LAN IP address.

**port number:** If there is the RSTP port number on the Port page, you must only use RTSP port number. otherwise, you must only use http port number.

**Videostream:** Here support three modes: videoMain, videoSub and audio. When the network speed is bad, here you had better select videoSub. If you select audio, you can only hear the sound but cannot see the video.

**For example:**

IP: 192.168.1.11

Port number: 88

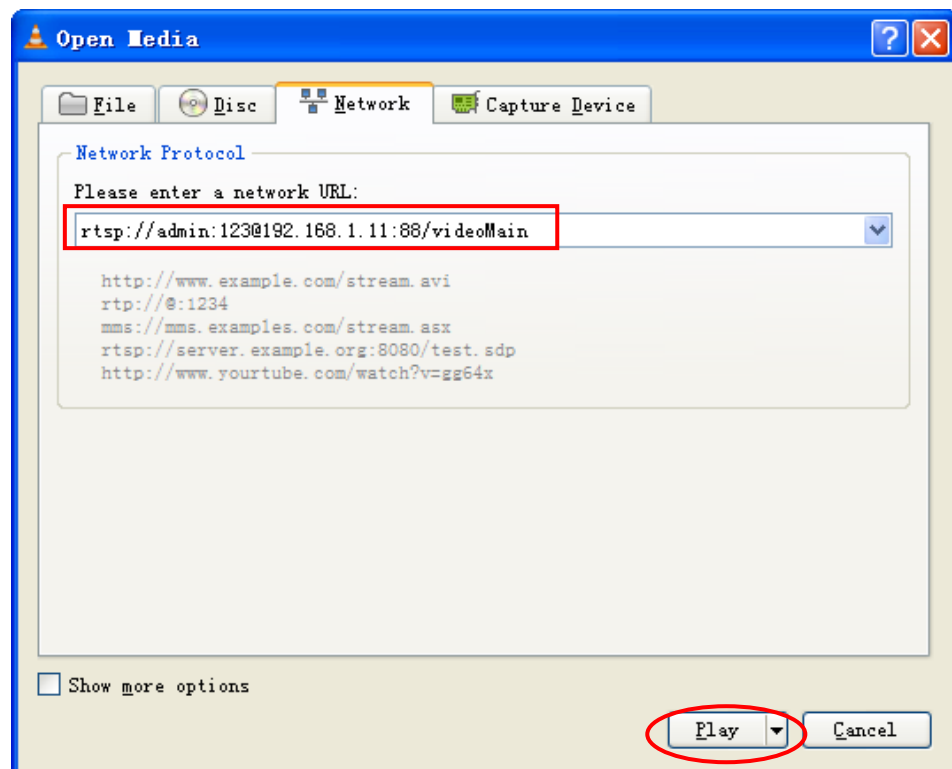

User name: admin

Password: 123

Here I can enter one of the following URLs in the VLC.

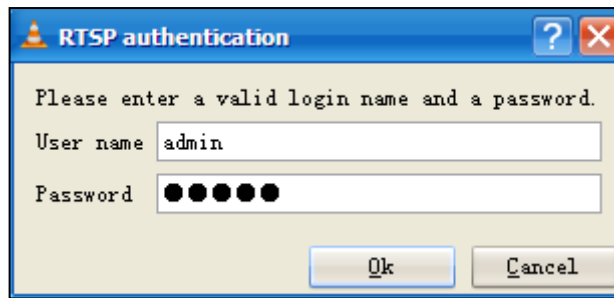

1. rtsp://admin:123@192.168.1.11:88/videoMain
2. rtsp:// @192.168.1.11:88/videoMain
3. rtsp://:123@192.168.1.11:88/videoMain
4. rtsp://admin@192.168.1.11:88/videoMain

Open the VLC, and go to Media Open Network Stream option, then enter the URL into VLC.

Sometimes you may need to enter the user name and password again. Click OK and you can see the real-time

preview.

If you cannot play the video in the VLC player, please check the port mapping.

**NOTE:** If you modify the camera's username or password, you had better reboot the camera, or else the new username and password cannot take effect when you enter the authentication in the VLC.

## 2.5 IP Camera Connection to the Server

Device supports ONVIF 2.2.1 protocol, You can easily access the NVR with ONVIF or server with ONVIF.

---

## 3 Surveillance Software GUI

Please refer to the section 2.1 if you install the camera for the first time. You can start to learn about software operation after finish quick installation.

### 3.1 Login Window

#### **Section1** Enter the Username and password

The default administrator username is admin with no password, please change the password at first using and prevent unauthorized users login the camera.

#### **Section2** Stream

The camera supports two stream modes: Main stream and sub stream. If you want to access the camera form LAN, here you can select Main stream. If you want to access the camera from Internet, here we recommend sub stream.

**NOTE:** When the network bandwidth is bad you'd better select Sub Stream and the video will be more fluent.

#### **Section3** Select the language

You can select the language you need by clicking on the language dropdown list.

#### **Section4** login the camera

Click **Login** button.

**NOTE:** When setting up your camera for the first time, it will request that you modify the default username and / or password if both are still set to default. Input the new username and password, click **Modify** to complete the modification. You will now use the new username and password to login the camera in the future.

Username

New username

New password

Security Level

Confirm the password

After logging in for the first time, you will go to **Setup Wizard** automatically. Here you can set the basic parameters of camera, such as camera name, camera time, wireless settings, IP configuration.

### Setup Wizard

**Setup Wizard - Start**

Follow the guide to set your camera, click "Next" to start.  
Please click the menu on the left for more settings.

**Country:** Select the country.

### Setup Wizard

**Step 1 of 5 - country**

country

Please select the country where you live to ensure a better video experience for you.

**Device Name:** You could give name for your camera.

### Setup Wizard

**Step 2 of 5 - Camera Name**

Camera Name

The maximum Device Name length is 20, support English, numbers, letters and symbols

**System Time:** Select the time zone you need to set the date, time, format, etc.

### Setup Wizard

#### Step 3 of 5 - Camera Time

Time Zone: (GMT) Greenwich mean time; London, Lisbon, ▾

Sync with NTP server

NTP Server: Auto ▾

Device Time: 2016-9-7 09:18:38

Date Format: YYYY-MM-DD ▾

Time Format: 24-hour ▾

use DST

From: April ▾ first ▾ Sunday ▾ 2 ▾ : 0 0

To: October ▾ the last one ▾ Sunday ▾ 2 ▾ : 0 0

Ahead Of Time: 0 ▾ Minute

**Wireless networks:** Click **Scan**, find the SSID of your wireless router, select and enter the password.

### Setup Wizard

#### Step 4 of 5 - Wireless Settings

**Wireless Network List** 1

SSID(Network Name)	Encryption	Quality
ADlink-heng	WPA/WPA2	<div style="width: 100%; height: 10px; background: linear-gradient(to right, green 90%, yellow 10%);"></div>
fusha+TP-LINK_403E	WPA/WPA2	<div style="width: 100%; height: 10px; background: linear-gradient(to right, green 90%, yellow 10%);"></div>
app_net	WPA/WPA2	<div style="width: 100%; height: 10px; background: linear-gradient(to right, green 90%, yellow 10%);"></div>
APP210	WPA/WPA2	<div style="width: 100%; height: 10px; background: linear-gradient(to right, green 90%, yellow 10%);"></div>
product-2.4GHz	WPA/WPA2	<div style="width: 100%; height: 10px; background: linear-gradient(to right, green 90%, yellow 10%);"></div>
TP-LINK_3742	WPA/WPA2	<div style="width: 100%; height: 10px; background: linear-gradient(to right, green 90%, yellow 10%);"></div>
docdev2	WPA/WPA2	<div style="width: 100%; height: 10px; background: linear-gradient(to right, green 90%, yellow 10%);"></div>
TP-LINK_A5DC	Unencrypt	<div style="width: 100%; height: 10px; background: linear-gradient(to right, green 90%, yellow 10%);"></div>
Hi-WiFi-1307	WPA/WPA2	<div style="width: 100%; height: 10px; background: linear-gradient(to right, green 90%, yellow 10%);"></div>
1234567890987654321	WPA/WPA2	<div style="width: 100%; height: 10px; background: linear-gradient(to right, green 90%, yellow 10%);"></div>

SSID	product-2.4GHz
Encryption	WPA/WPA2 ▾
Password	●●●●●●

3

The maximum password length is 63, including numbers, letters and symbols

2

**IP:** Set IP address of the camera. You could choose to obtain an IP automatically or set the IP address according to your needs.

### Setup Wizard

#### Step 5 of 5 - IP Configuration

Obtain IP From DHCP

IP Address	192.168.1.4
Subnet Mask	255.255.255.0
Gateway	192.168.1.1
Primary DNS Server	192.168.8.8
Secondary DNS Server	211.162.78.2

**NOTE:** It needs about 1 minute to connect the camera to your router.

## 3.2 Surveillance Window

The screenshot shows the FOSCAM surveillance window interface. At the top, there is a header bar with the FOSCAM logo (1), 'Live Video' (2), 'Settings' (3), and 'Playback' (4) buttons, and the text 'Outdoor Waterproof IP Camera'. Below the header is a control panel on the left with various settings: 'Mode' (Outdoor Mode), 'Stream' (HD Mode/ 2K/ 20fp), 'WDR' (On), 'NAA' (On), 'Mirror' and 'Flip' checkboxes, 'IR LED Lights' button, 'Mode' (Auto), and 'Color Adjustment' button. The main area is a live video feed of a living room. A timestamp '2019 01 13 10:50:35' and 'Foscam Camera' are overlaid on the video (6). At the bottom, there is a playback control bar with several buttons (7).

### Section1 FOSCAM Logo / LiveVideo / Settings buttons

**FOSCAM**: FOSCAM LOGO

**LiveVideo**: Path to surveillance window. Click this button and back to the surveillance window

**Settings**: Path to Administrator Control Panel, Click it, and it will lead to Administrator Control Panel and

---

do advanced settings.

Click this button to go back to the Playback panel to view the stored audio files stored in the SD Card.

## Section2 Multi-Device Window

The firmware inside the camera supports up to maximum of 9 cameras being monitoring at the same time. You can add other cameras in multi-camera panel.

## Section3 Mode/ Stream / WDR / NAA /Mirror/ Flip buttons

### Mode

- 1) 50Hz -----Indoor surveillance (Region: Europe, China)
- 2) 60Hz -----Indoor surveillance (Region: USA, Canada)
- 3) Outdoor Mode-----Outdoor surveillance

### Stream

The default stream supports multiple modes, For example: Equilibrium Mode / 1080P / 20fps / 1M meanings: **Stream type / Resolution / Maximum frame rate / Bit rate**. (Different models support different specific mode. )

**1) Stream type no.** Identify the stream type.

#### 2) Resolution

The bigger the resolution, the better of the image quality is. If you are accessing the camera via internet and want to get more fluent video streaming, please select resolution VGA.

#### 3) Maximum frame rate

The maximum frame rate is 30 fps. You should lower frame rate when the bandwidth is limited. Normally, when the frame rate above 15, you can achieve fluently video. The maximum frame rate for each model is different, please refer to [6.3 Specification](#).

#### 4) Bit Rate

Generally speaking, the larger the bit rate is, the clearer video will become. But the bit rate configuration should combine well with the network bandwidth. When the bandwidth is very narrow, and bit rate is large, that will lead to video cannot play well.

You can reset the stream type on **Settings > Video > Video Settings** panel.

**WDR:** WDR stands for High Dynamic Range. It usually refers to the method of capturing images having "greater dynamic range between the lightest and darkest areas of an image than current standard digital imaging methods or photographic methods". You can select **ON** from the dropdown list under sunlight or with bright background.

**NAA:** NAA (Network Auto-Adaptability) can make IP Camera changing the real-time rate to adapt different network conditions, which can supply better preview experience. It is OFF as default.

#### Section4 IR LED Lights

Click Infra led and there are three modes to adjust the infrared led: Auto, Manual and Schedule.

**Auto:** Select it and the camera will adjust the infra led (on or off) automatically.

**Manual:** Select it and turn off the infra led manually.

**Schedule:** Select it and the IR led light will be off at the schedule period. If you want to define or change the IR led lights schedule time, please go to **Settings > Video > IR LED Schedule** page.

#### Section5 Color Adjustment

In this page, you can tune Hue, Brightness, Contrast, Saturation, and Sharpness to get higher quality.

**Section6 OSD**

If you have added time and camera name in the video, you can see it in the live window.

Go to **Settings > Basic settings > Camera name** panel, and you can change another device name. The default device name is anonymous.

Go to **Settings > Basic settings > Camera time** panel and adjust the device time.

Go to **Settings > Video > On Screen Display** panel, you can add or no add OSD.

**Section7 Play / Stop / Talk / Audio / Snap / Record / Full screen button**

**1-----Play** Click it to play the video of the camera

**2-----Stop** Click it to stop the video of the camera

**3----- Talk** Click the button and the icon will become to , then talk to the microphone that connected with PC, people around the camera can hear your voice if the camera has connected with audio output device. Click the icon again and stop talking.

**4----- Audio** Click the button and the icon will become to , you can hear the sound around the camera if the camera has connected with other audio input device through the Audio Input port of the camera, Click the icon again and stop audio.

**5----- Volume** Click the button and the icon will become to , you can set the volume.

**6----- Snap** Click it to make snapshot and it pop up a window which picture you snapshot, right click in the window and save the picture to anywhere you want.

**7----- Record** Click the icon  and the camera start recording, you can see a green dot in the live window. Click again and stop recording. The default storage path is C:\IPCamRecord. You can change the storage path: Go to **Settings > Record > Storage Location** panel.

**8-----Full Screen** Click it to make full-screen, or you can double click the surveillance screen to make full-screen. Double click again and exit full-screen.

## Onscreen Mouse Control

Right click the mouse and you can adjust the screen ration, full screen and Zoom up.

**Keep Ration:** Select it and the camera will adjust the size of live window based on the computer monitor automatically.

Sometimes there is a black border around the video, please select Keep ration to get a better visual quality.

---

**Full Screen:** Select it and Click it to make full-screen, press ESC and exit full-screen.

**Zoom Up / Down:** Click it and the live view will be digital zoomed up, then click Zoom Down and the live view back to original size.

**NOTES:**

1. This camera don't support Pan / Tilt function, so here can not allow to use Screen PTZ.
2. For Mac OS, the plugin cannot support Onscreen Mouse function, so you cannot allow to use it.

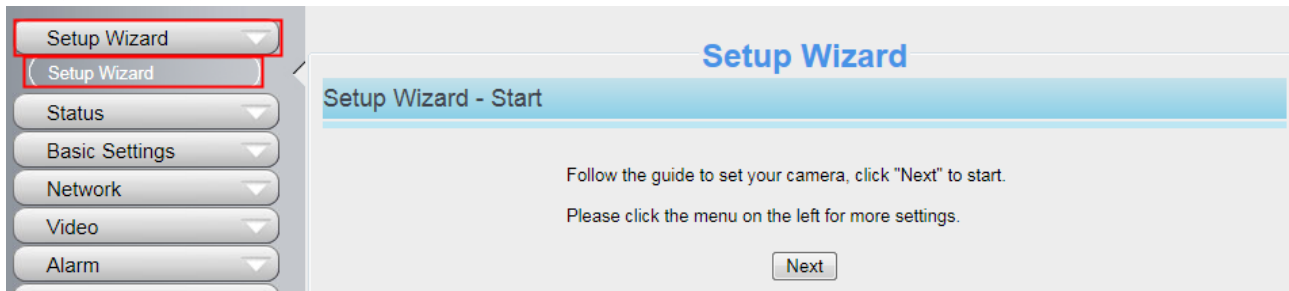

---

## 4 Advanced Camera Settings

Click the button **Settings**, goes to Administrator Control Panel to make advanced camera settings.

### 4.1 Setup Wizard

The way to set it, you could refer to section 3.1.

### 4.2 Device Status

Device Status contains four columns: Device Information, Device Status, Session Status and Log, it will show you various information about your camera.

#### 4.2.1 Device Information

Device Information	
Camera Name	Foscam_Camera
Camera ID	A0E6EC012F32
Camera Time	2019/01/13 23:53:16
System Firmware Version	1.14.2.1
Application Firmware Version	2.102.2.2
Plug-In Version	5.0.0.3

**Camera Name:** The Device Name is a unique name that you can give to your device to help you identify it. Click Basic Settings and go to Device Name panel where you can change your camera name. The default device name is anonymous.

**Camera ID:** Display the MAC address of your camera. For example Device ID is 008414350787, the same MAC ID sticker is found at the bottom of the camera.

**Camera Time:** The system time of the device. Click Basic Settings and go to Camera Time panel and adjust the time.

**System Firmware Version:** Display the System Firmware version of your camera.

**Application Firmware Version:** Display the application firmware version of your camera.

**Plug-In Version:** Display the plug-in version of your camera

### 4.2.2 Device Status

On this page you can see device status such as Alarm status, NTP / DDNS status, WIFI status and so on.

Device Status	
Motion alarm status	Detect alarm
Sound alarm status	No alarm
Recording Status	Not Recording
SD Card Status	No SD card
SD Card Free Space	0KB
SD Card Total Space	0KB
NTP Status	Failed
DDNS Status	Disabled
UPnP Status	Disabled
WiFi Status	Not connected
IR LED Status	Off

### 4.2.3 Session Status

Session status will display who and which IP is visiting the camera now.

Session Status	
Username	IP Address
1	192.168.31.29

## 4.2.4 Log

The log record shows who and which IP address accessed or logout the camera and when.

NO.	Time	User	IP	Log
1	2014-01-09 14:12:35	root	127.0.0.1	Detected motion alarm
2	2014-01-09 14:11:58	root	127.0.0.1	Detected motion alarm
3	2014-01-09 14:11:58	root	127.0.0.1	Detected motion alarm
4	2014-01-09 14:11:24	rootcam	192.168.0.2	User off line
5	2014-01-09 14:11:13	root	127.0.0.1	Detected motion alarm
6	2014-01-09 14:11:13	root	127.0.0.1	Detected motion alarm
7	2014-01-09 14:10:44	root	127.0.0.1	Detected motion alarm
8	2014-01-09 14:10:28	root	127.0.0.1	Detected motion alarm
9	2014-01-09 14:09:41	root	127.0.0.1	Detected motion alarm
10	2014-01-09 14:08:31	root	127.0.0.1	Detected motion alarm

Reboot the camera and clear the log records.

## 4.3 Basic Settings

This section allows you to configure your Camera Name, Camera Time, Mail, User Accounts and Multi-Device.

### 4.3.1 Camera Name

Default alias is anonymous. You can define a name for your camera here such as apple. Click **Save** to save your changes. The alias name cannot contain special characters.

Camera Name:

### 4.3.2 Camera Time

This section allows you to configure the settings of the internal system clocks for your camera.

Click **Setting > Basic Setting > Camera Time** to enter the **Camera Time** setting page.

**Time Zone:** Select the time zone for your region from the drop-down menu.

**Sync with NTP server:** Network Time Protocol will synchronize your camera with an Internet time server. Choose the one that is closest to your camera.

**Sync with PC / Terminal:** Select this option to synchronize the date and time of the Network Camera with your computer.

**Manually:** The administrator can enter the date and time manually. Please select the date and time format.

**use DST:** Select the **use DST** (Daylight Saving Time, to set the clock ahead of the real-time), then set the start time and end time of the DST, select the daylight saving time from the drop-down menu at last.

**Click Save** button to submit your settings.

**NOTE:** If the power supply of camera is disconnect, you need set the camera's time again.

### 4.3.3 User Accounts

Here you can create users and set privilege, **visitor**, **operator** or **administrator**. The default administrator user accounts are admin with a blank password.

NO.	Username	Privilege
1	foscam	Administrator
2		
3		
4		
5		
6		
7		
8		

## How to change the password?

Firstly, select the account which you want to change the password, then select **Change Password**, enter the old password and the new password, lastly click modify to take effect.

### User Accounts

**NOTE:** The default administrator account cannot be deleted, but you can add other administrator users.

#### 4.3.4 Multi-Camera

If you want to view multi-surveillance screens on one window, you need to login one camera, and set it as the main device, and do Multi-Device Settings, add other cameras to the first one camera. Before you do multi-cams settings, you need to assign different port such as 81, 82, 83, 84, 85, 86, 87, 88 to the cameras if there is 8 cams installed.

The firmware within the camera can support a maximum of 9 devices monitoring all at the same time. This page you can both add FOSCAM MJPEG and H.264 series cameras to the first camera and view multi-surveillance screen on one window.

#### Add cameras in LAN

In Multi-Device Settings page, you can see all devices searched in LAN. The 1st Device is the default one. You can add more cameras in the list in LAN for monitoring. The camera's software supports up to 9 IP Cameras online simultaneously. Click The **2nd Device** and click the item in the Device List in LAN, the Alias, Host and Http Port will be filled in the boxes below automatically. Enter the correct username and password then click **Add**. Add more cameras in the same way.

**Multi-Camera**

Cameras On LAN: FI9821P(172.16.0.94), 1111(172.16.1.71), FOSCAM(172.16.0.27), **anonymous(172.16.0.179)**, FOSCAM(172.16.0.195)

The 1st Camera: This Camera

**The 2nd Camera**

Camera Model	H264
Camera Name	anonymous
Host	172.16.0.179
HTTP Port	80
Media Port	80
Username	admin
Password	

The 3rd Camera: None

The 4th Camera: None

**1 Click it, camera model, alias, host and HTTP Port will be filled in the following boxes automatically .**

**2 Enter the User name and password of the 2nd camera .**

**3 Click Add to take effect .**

**Camera Model:** Our Company produces two series cameras: MJPEG and H.264. Here will show you which series the camera belongs to.

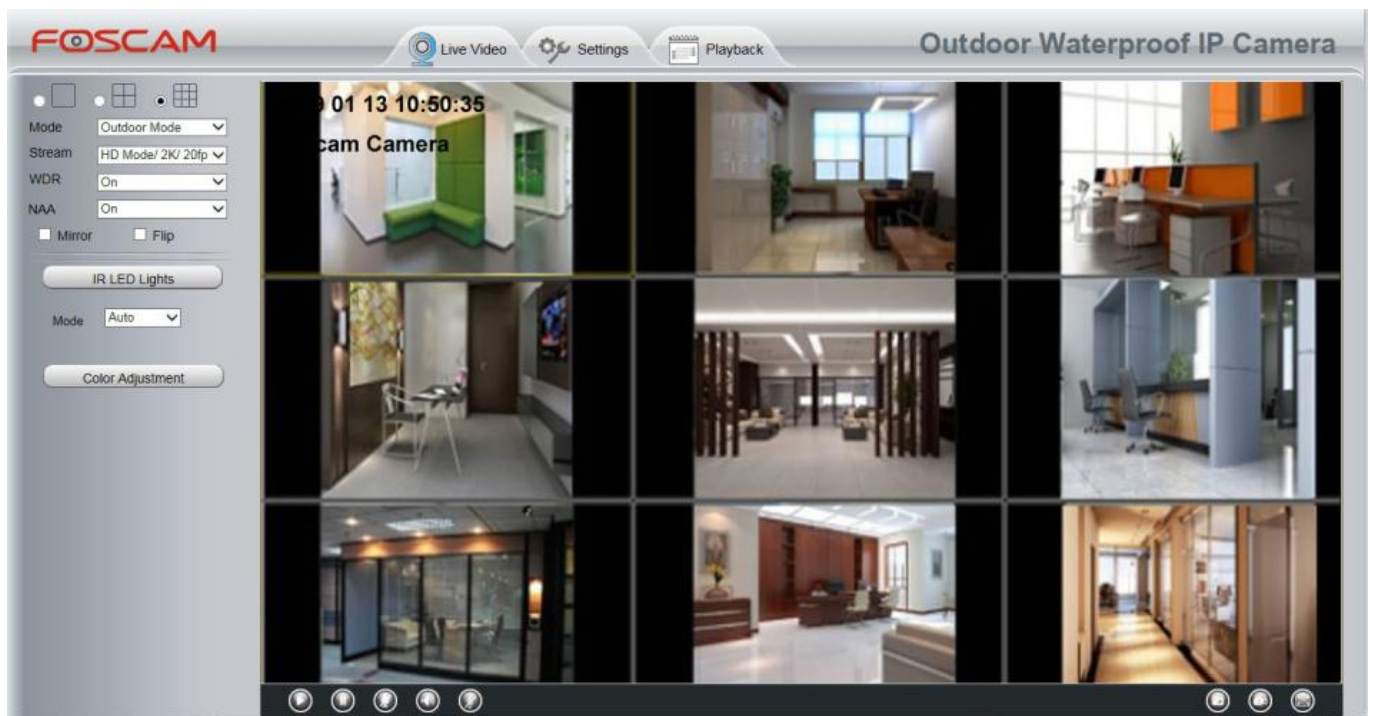

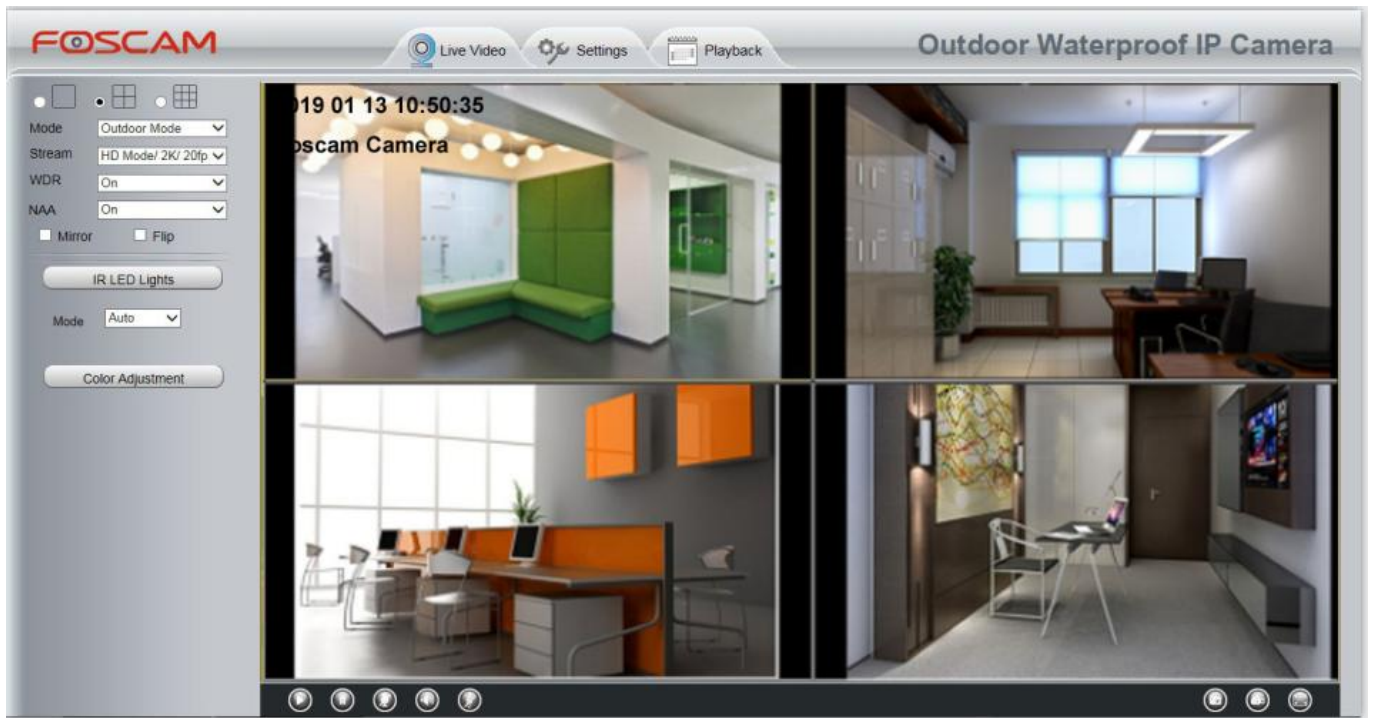

Cameras On LAN: anonymous(192.168.11.193), FI9821W for ebuyer (192.168.11.241), **anonymous(192.168.11.203)**, anonymous(192.168.11.243)

The 1st Camera	This Camera
<a href="#">The 2nd Camera</a>	anonymous(192.168.11.203)
<a href="#">The 3rd Camera</a>	FI9821W for ebuyer (192.168.11.241)
<a href="#">The 4th Camera</a>	anonymous(192.168.11.203)
<a href="#">The 5th Camera</a>	None
<a href="#">The 6th Camera</a>	None
<a href="#">The 7th Camera</a>	None
<a href="#">The 8th Camera</a>	None
<a href="#">The 9th Camera</a>	None

Note: If you want to access your camera remotely, make sure you are able to access it seperately through a browser.

Back to Surveillance Windows, and click Four Windows option, you will see four cameras you added.

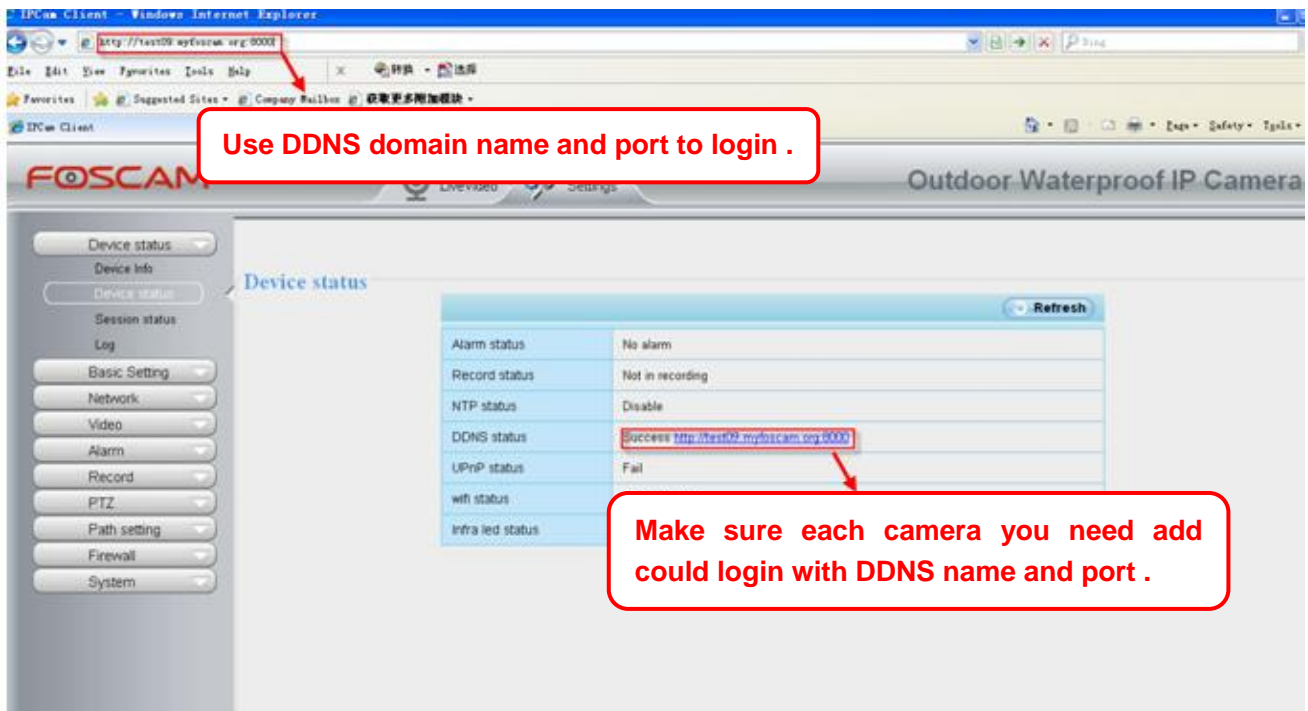

### Add cameras in WAN

If you want to view all cameras via the internet (remote computer), you will need to add them using DDNS domain name. Firstly, make sure all of the cameras you added can be accessed through the internet. (Read How to configure DDNS settings in chapter [4.4.4 DDNS](#))

Login to the first camera using a DDNS domain name and port.

Click Multi-Device Settings. Choose The 2nd Device. Fill in the 2nd camera's name, DDNS domain name, port number. Enter user name and password and then choose Add.

- 1----- The camera model: MJ or H.264.
- 2----- The 2nd camera's name
- 3----- Fill in the 2nd camera's DDNS host not LAN IP
- 4 ---- Enter the 2nd camera's user name and password

5---- Click Add button and to take effect

**NOTE:** Here the Host must be entered as the second camera's DDNS domain name, not its LAN IP.

Refresh	
Device List in LAN	apple(192.168.13.102) mycamera(192.168.13.108) ipcam(192.168.13.107) FI9821W-01(192.168.13.106) Refresh
The 1st Device	This Device
<a href="#">The 2nd Device</a>	apple(camera.no-ip.info)
<a href="#">The 3rd Device</a>	ipcam(test01.foscam.org)
<a href="#">The 4th Device</a>	mycamera(owlejwww.no-ip.info)
<a href="#">The 5th Device</a>	None
<a href="#">The 6th Device</a>	None
<a href="#">The 7th Device</a>	None
<a href="#">The 8th Device</a>	None
<a href="#">The 9th Device</a>	None

Attention: If you want to access the device from internet, be sure the host and port that you set can be accessed from internet.

Return to video window. You will see all of the cameras accessible through the internet.

When you are away from home, you can use the first camera's DDNS domain name and port to view all the cameras via internet.

### 4.3.5 Voice Prompt

On this page, you can enable or disable voice prompt. Select "Yes" to enable or select "No" to disable. If select "Yes", you can hear the voice prompt after connect the audio output device.

Save Refresh

Voice Prompt Yes

## 4.4 Network

This section will allow you to configure your camera's IP, DDNS, Wireless Settings, UPnP, Port, Mail Settings and FTP Settings.

### 4.4.1 IP Configuration

If you want to set a static IP for the camera, please go to **IP Configuration** page. Keep the camera in the same

subnet of your router or computer.

The screenshot shows a web interface for IP Configuration. On the left is a navigation menu with items: Status, Basic Settings, Network, IP Configuration (highlighted with a red box), PPPoE, DDNS, UPnP, Port, Mail Settings, FTP Settings, Video, and Alarm. The main area is titled 'IP Configuration' and contains a 'Save' button and a 'Refresh' button. Below these is a checkbox for 'Obtain IP From DHCP' which is unchecked. A table contains the following fields:

IP Address	172.16.0.249
Subnet Mask	255.255.0.0
Gateway	0.0.0.0
Primary DNS Server	0.0.0.0
Secondary DNS Server	0.0.0.0

Below the table is a note: 'Note: Once you save your settings, the camera will restart.'

Changing settings here is the same as using the Equipment Search Tool.

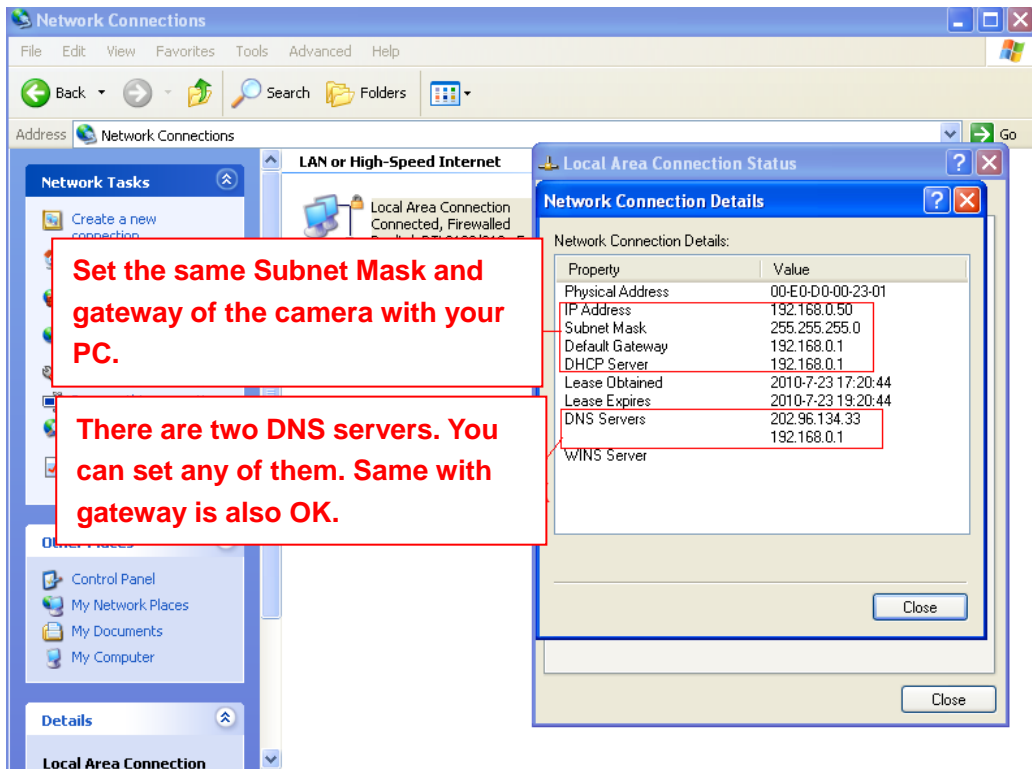

It is recommended that you use the subnet mask, gateway and DNS server from your locally attached PC. If you don't know the subnet mask, gateway and DNS server, you can check your computer's local area connection as follows:

**Control Panel > Network Connections > Local Area Connections > Choose Support > Details.**

The screenshot shows a Windows Network Connections window. The 'Local Area Connection Status' dialog box is open, showing the 'Support' tab. The 'Connection status' section displays:

- Address Type: Assigned by DHCP
- IP Address: 192.168.0.50
- Subnet Mask: 255.255.255.0
- Default Gateway: 192.168.0.1

The 'Details...' button is circled in red, with a red arrow pointing to it and the text 'Click here' next to it. Below the status information, there is a message: 'Windows did not detect problems with this connection. If you cannot connect, click Repair.' and a 'Repair' button. A 'Close' button is at the bottom right of the dialog box.

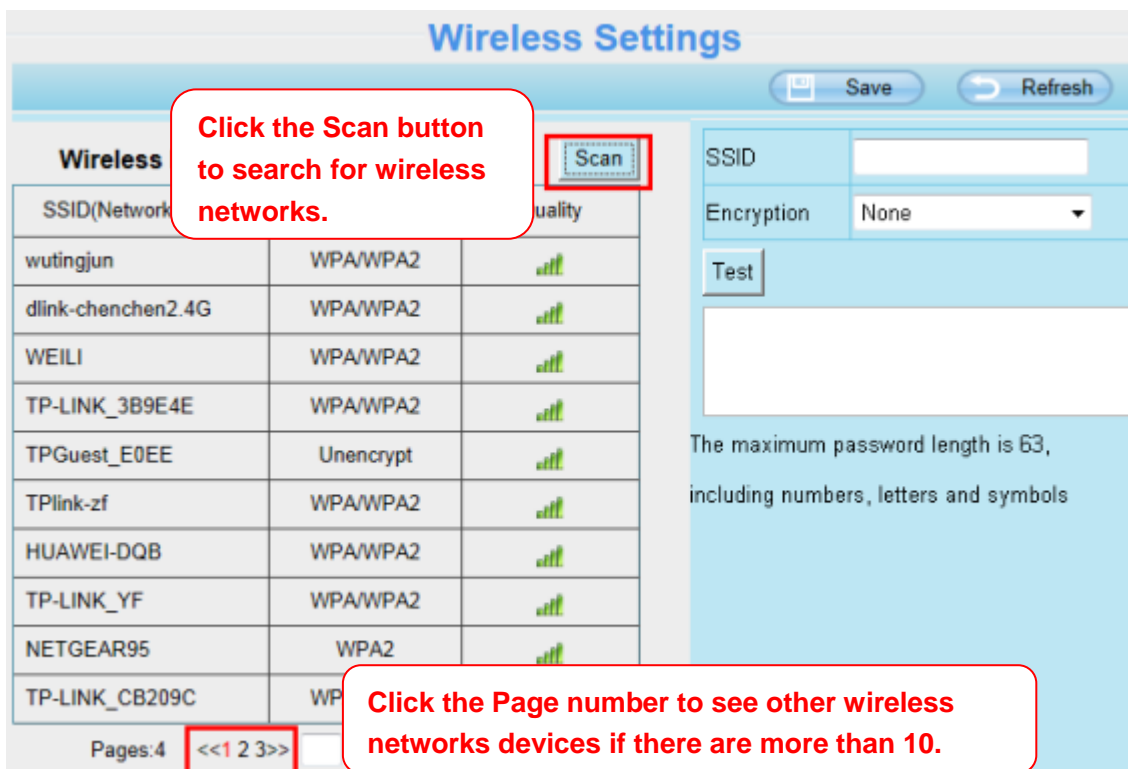

If you don't know the DNS server, you can use the same settings as the Default Gateway.

#### 4.4.2 Wireless Settings

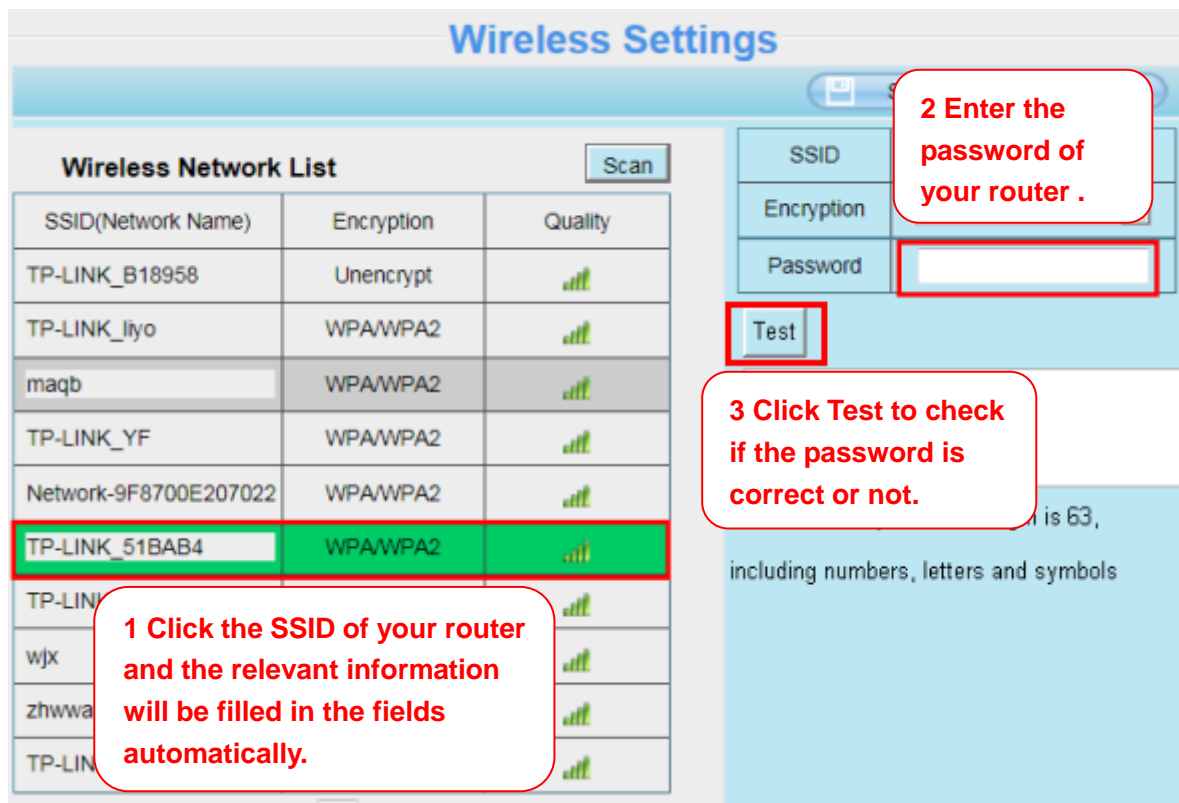

**Step 1:** Choose **Settings** on the top of the camera interface, and go to the "Network" panel on the left side of the screen, then click **Wireless Settings**.

Click the Scan button and the camera will detect all wireless networks around the area. It should also display your router in the list.

**Step 2:** Click the SSID (name of your router) in the list, the corresponding information related to your network, such as the name and the encryption, will be filled into the relevant fields automatically.

You will only need to fill in the password of your network. Make sure that the SSID, Encryption and the password you filled in are exactly the same for your router.

**Step 3:** Please click on the Save button after all settings have been entered and disconnect the network cable. Never shut down the power of the camera until the IP camera is able to connect to the wireless network.

The LAN IP address will disappear on the window of Equipment Search Tool when the camera is configuring a wireless connection. Wait about 1 minute, the camera should obtain a wireless connection, and the LAN IP of the camera will show again on the window of the Equipment Search Tool. The IP address may have changed after the camera receives a wireless connection; we recommend setting a static local IP address if this IP address changes by right clicking the camera in Equipment Search Tool, setting a static IP, and pushing OK. Congratulations! You have set up the wireless connection of the camera successfully.

**NOTE:** If you fail to make a wireless connection, please refer to your seller or contact us directly for assistance.

#### 4.4.3 DDNS

If you need Foscam DDNS, you can apply it on DDNS page.

First Enable DDNS, then select "myfoscam.org" from DDNS Server list, click "Get My DDNS Now".

**DDNS**

Save Refresh

Enable DDNS  1

Manufacturer's DDNS

Manufacturer's DDNS  Restore DDNS to factory

Third Party DDNS

DDNS Server **myfoscam.org** 2

Your camera do not have a Foscam DDNS! You can get a DDNS for free by click "Get My DDNS Now".

**Get My DDNS Now** 3

Then login your Foscam Cloud account for myfoscam.org, and click "Get DDNS".

**DDNS**

Save Refresh

Please login your Foscam Cloud Account for myfoscam.org.

E-mail

Password

**Get DDNS**

I don't have a Foscam Account! [Tap HERE](#)

If you don't have a Foscam Cloud account, click "Tap HERE" to register one, then click "Get DDNS".

## DDNS

Save Refresh

Confirm Password

Get DDNS

After get DDNS, click "Finish" to go back to DDNS settings.

## DDNS

Save Refresh

Click "Finish" to go back to DDNS settings.

[nuf9994.myfoscam.org](http://nuf9994.myfoscam.org)

Finish

**DDNS**

 Save  Refresh

Enable DDNS

Manufacturer's DDNS

Manufacturer's DDNS	<input type="text" value="nuf9994.myfoscam.org"/>	Restore DDNS to factory
---------------------	---	-------------------------

Third Party DDNS

DDNS Server	<input type="text" value="None"/>
Domain	<input type="text"/>

If the network error, you fail to get the DDNS, please try again.

**DDNS**

 Save  Refresh

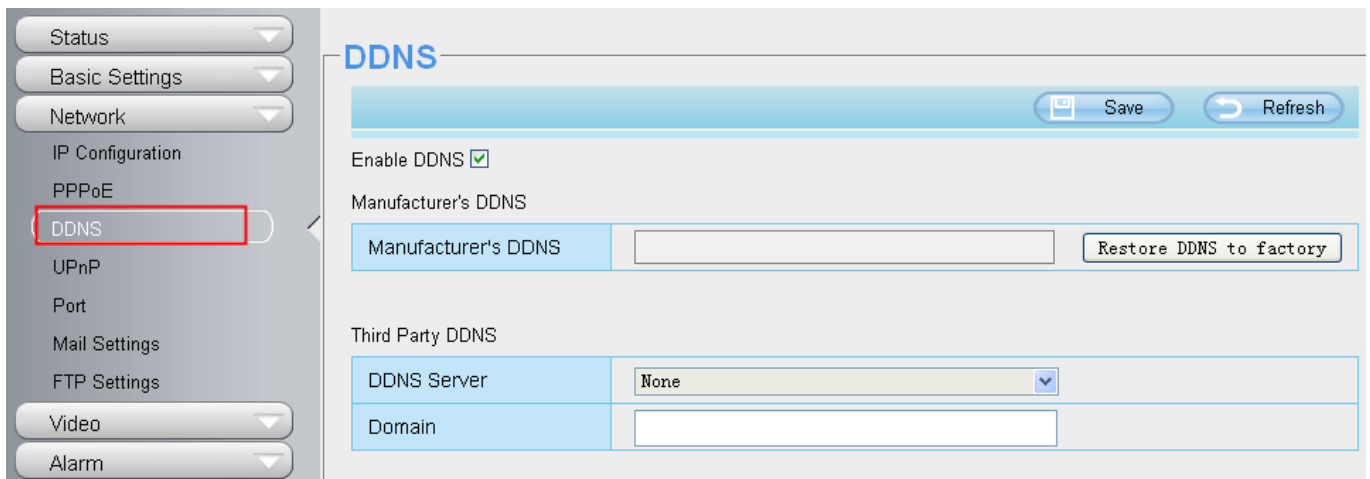

Network error, please try again later.

Once you success get Foscam DDNS, you can follow below step to use.

Here take **test09.myfoscam.org** for example. Go to option of DDNS on the **Settings->Network** panel, you can see the domain name.

Here take **cp4911.myfoscam.org** for example. Go to option of DDNS on the **Settings->Network** panel, you can see the domain name.

Now you can use **http:// Domain name + HTTP Port** to access the camera via internet.  
 Take hostname **cp4911.myfoscam.org** and HTTP Port no. 8000 for example, the accessing link of the camera via internet would be **http://cp4911.myfoscam.org:8000**

**Restore DDNS to factory:** If you have configured Third Party DDNS successfully, but you want to use Manufacturer's DDNS again , here click this button and start Manufacturer's DDNS Service.

### Third Party Domain Name Settings

User can also use third part DDNS, such as [www.no-ip.com](http://www.no-ip.com) ,[www.3322.com](http://www.3322.com)

Here take [www.no-ip.com](http://www.no-ip.com) for example:

**1. Step 1 Go to the website [www.no-ip.com](http://www.no-ip.com) to create a free hostname**

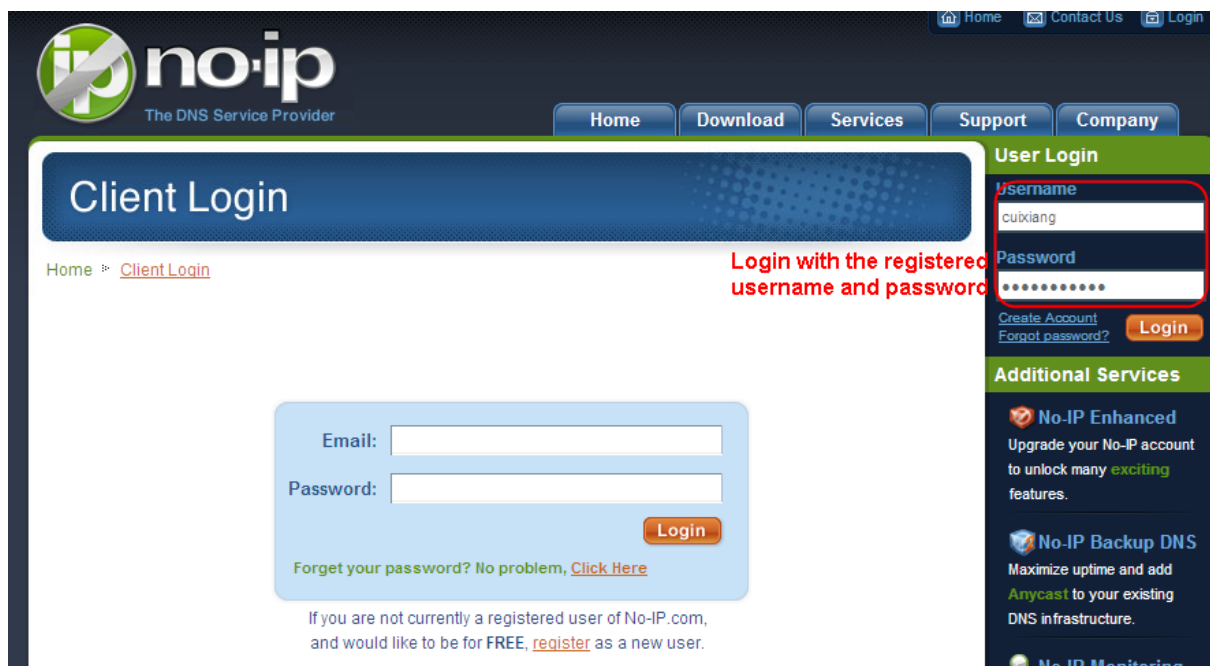

Firstly: Login on [www.no-ip.com](http://www.no-ip.com) and click No-IP Free to register.

Please register an account step by step according to instructions on [www.no-ip.com](http://www.no-ip.com)

After registration, please login your email which used to register. You will receive an email from website, please click the link to activate your ACCOUNT as indicated in email.

**Secondly: Login the link with the registered username and password to create your domain name.**

Please create the domain name step by step according to instructions on [www.no-ip.com](http://www.no-ip.com)

**Step 2 DO DDNS Service Settings within the Camera**

Please set DDNS Settings within the camera by hostname, a user name and password you've got from [www.no-ip.com](http://www.no-ip.com)

Take hostname ycxgwp.no-ip.info, user name **foscam**, password **foscam2012** for example.

**Firstly**, goes to option of DDNS Settings on the administrator panel.

**Secondly**, select No-Ip as a server.

**Thirdly**, fill foscam as DDNS user, fill password foscam2012 as DDNS password, fill ycxgwp.no-ip.info as DDNS domain and server URL, Then click save to make effect. The camera will restart and to take the DDNS settings effective.

**Fourthly**, after the restart, login the camera, and go to option of Device Status on the administrator panel, and check if the DDNS status is successful.

If failed, please double check if you have input the correct hostname, user name, and password, and try to redo the settings.

**NOTE:** If you have set Third Party DDNS successfully ,the Foscam Domain Name will be invalid. The Third Party DDNS and the Foscam Domain Name cannot work at the same time, the last time you configured will take effect.

## 2. Do port forwarding within the router

**Example:** The camera's LAN IP address is <http://192.168.8.100:2000>

**Firstly**, login the router, goes to the menu of Port Forwarding or Port Trigger (or named Virtue Server on some brands of router). Take Linksys brand router as an example, Login the router, and goes to Applications & Gaming > Single Port Forwarding.

**Secondly**, Create a new column by LAN IP address & HTTP Port No. of the camera within the router showed as below.

The screenshot shows the 'Single Port Forwarding' configuration page on a 'Wireless-N Home Router'. The page has a table with columns: Application Name, External Port, Internal Port, Protocol, To IP Address, and Enabled. There are two rows of configuration. The first row is for 'Http' with External Port 2000, Internal Port 2000, Protocol 'Both', To IP Address 192.168.8.100, and Enabled checked. The second row is for 'Media' with External Port 9200, Internal Port 9200, Protocol 'Both', To IP Address 192.168.8.100, and Enabled checked. Red boxes and arrows highlight these fields with instructions: 'Assign a name as you like here' points to the Application Name dropdown; 'Fill the HTTP Port no. of the camera on the column of External Port and Internal Port' points to the 2000 ports; 'Fill the Media Port no. of the camera on the column of External Port and Internal Port' points to the 9200 ports; and 'Fill the LAN IP of the camera here, just input the last section' points to the .100 part of the IP address.

Application Name	External Port	Internal Port	Protocol	To IP Address	Enabled
Http	2000	2000	Both	192.168.8.100	<input checked="" type="checkbox"/>
Media	9200	9200	Both	192.168.8.100	<input checked="" type="checkbox"/>

## 3. Use domain name to access the camera via internet

After the port forwarding is finished, you can use the **domain name+ http no.** to access the camera via internet. Take hostname ycxgwp.no-ip.info and http no. 2000 for example, the accessing link of the camera via internet would be [http:// ycxgwp.no-ip.info:2000](http://ycxgwp.no-ip.info:2000)

#### 4.4.4 UPnP

The default UPnP status is closed. You can enable UPnP, then the camera's software will be configured for port forwarding. Back to the **Device Status** panel, you can see the UPnP status:

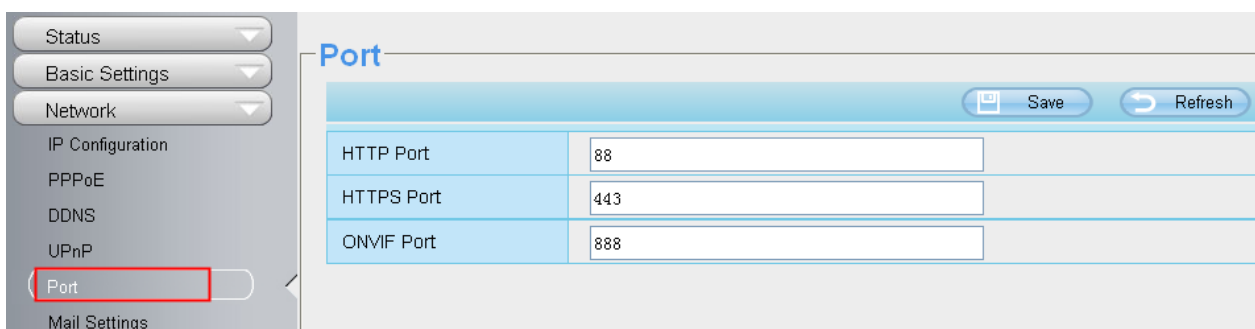

The camera's software will be configured for port forwarding. There may be issues with your routers security settings, and sometimes may error. We recommend you configure port forwarding manually on your router .

#### 4.4.5 Port

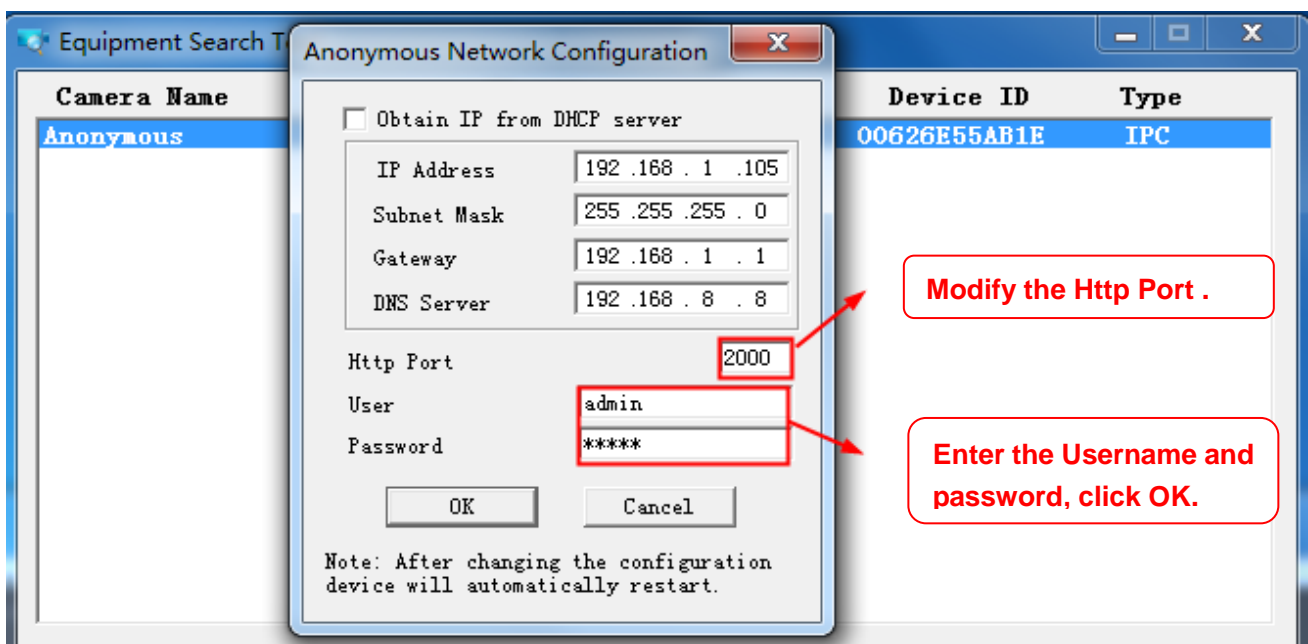

This camera supports HTTP Port / HTTPS Port / ONVIF Port. HTTP Port is used to access the camera remotely.

**HTTP port:** By default, the HTTP is set to 88. Also, they can be assigned with another port number between 1 and 65535. But make sure they can not be conflict with other existing ports like 25, 21.

#### Another way to change the HTTP port no.

**Step 1:** Open the Equipment Search Tool, select the camera you would like to change the port of, right click on the IP address, and click on "Network Configuration", this brings up the network configuration box .

**Step 2:** Enter the username and password of the Administrator (default username is admin with a blank password), and click **OK** to apply changes.

**Step 3:** Wait around 10 seconds, you'll see that the camera's LAN IP address has changed. In our example it was changed to 2000, so we see http://192.168.1.105:2000 in Equipment Search Tool. Also, the LAN IP address is now fixed at a static IP address of http://192.168.1.105:2000. This IP address will not change even if the camera is powered off and back on, the camera will remain on this LAN IP address. This is very important that a static LAN IP address is set, or you may have problems later with remote access and seeing the camera remotely if the camera loses power and reconnects on a different LAN IP address. Make sure you set a static LAN IP address!

Figure 4.1

**NOTE:** If the camera cannot be accessed, please make sure the port forwarding is succeed.

**HTTPS Port:** The default port is 443. You can use the url to access the camera: https:// IP + HTTPS port.

**ONVIF Port:** By default, the ONVIF port is set to 888. Also, they can be assigned with another port number between 1 and 65535 (except 0 and 65534). But make sure they can not be conflict with other existing ports.

**RTSP Port:** The default port is 554, only some IP Cameras have RTSP port.

#### 4.4.6 Mail Settings

If you want the camera to send emails when motion has been detected, here Mail will need to be configured.

Enable	<input checked="" type="checkbox"/>
SMTP Server	smtp.gmail.com
SMTP Port	25
Transport Layer Security	STARTTLS <small>G-Mail only supports TLS at Port 465 and STARTTLS at Port 587 or 25.</small>
Need Authentication	Yes
SMTP Username	cuiyao93@gmail.com
SMTP Password	..... Test
Sender E-mail	cuiyao93@gmail.com
First Receiver	yaoyao@163.com
Second Receiver	
Third Receiver	
Fourth Receiver	

**1----- SMTP Server / Port / Transport Layer Security** Enter SMTP server for sender. SMTP port is usually set as 25. Some SMTP servers have their own port, such as 587 or 465, and Transport Layer Security usually is None. If you use Gmail, Transport Layer Security must be set to TLS or STARTTLS and SMTP Port must be set to 465 or 25 or 587, which port you choose should be decided by which Transport Layer Security you select.

**2-----SMTP Username / password** ID account and password of the sender email address

**3----- Sender E-mail** Mailbox for sender must support SMTP

**4----- Receiver** Mailbox for receiver need not support SMTP, you can set 4 receivers

**5----- Save** Click Save to take effect

**6----- Test** Click Test to see if Mail has been successfully configured.

Click **Test** to see if Mail has been successfully configured.

Save Refresh	
Enable <input checked="" type="checkbox"/>	
SMTP Server	smtp.gmail.com
SMTP Port	25
Transport Layer Security	STARTTLS G-Mail only supports TLS at Port 465 and STARTTLS at Port 587 or 25.
Need Authentication	No
SMTP Username	yaoyao@gmail.com
SMTP Password	..... Test Success → Test result .
Sender E-mail	yaoyao@gmail.com
First Receiver	yaoyao@163.com
Second Receiver	
Third Receiver	
Fourth Receiver	

If the test success, you can see the Success behind the Test, at the same time the receivers will receive a test mail.

If the test fails with one of the following errors after clicking Test, verify that the information you entered is correct and again select Test .

- 1) Cannot connect to the server.
- 2) Network Error. Please try later.
- 3) Server Error.
- 4) Incorrect user or password.
- 5) The sender is denied by the server. Maybe the server need to authenticate the user, please check it and try again.
- 6) The receiver is denied by the server. Maybe because of the anti-spam privacy of the server.
- 7) The message is denied by the server. Maybe because of the anti-spam privacy of the server.
- 8) The server does not support the authentication mode used by the device.

#### 4.4.7 FTP Settings

If you want to upload record images to your FTP server, you can set **FTP Settings**.

<div style="text-align: right;"> <input type="button" value="Save"/> <input type="button" value="Refresh"/> </div>	
FTP Server	<input type="text" value="ftp://192.1681.8.150"/> Example:ftp://192.168.1.103/dir The maximum length of the address is 127, does not support the character & =
Port	<input type="text" value="21"/>
FTP Mode	PASV
Username	<input type="text" value="user"/> The maximum length of the user name is 63, support numbers, letters and symbols _ @ \$ * - , . # !
Password	<input type="password" value="....."/> The maximum password length is 63, including numbers, letters and symbols ~ ! @ # \$ % ^ * ( ) _ + { } : "   < > ? ` - ; ' \ , . /
<input type="button" value="Test"/>	<input type="text" value="FTP server address error"/>

**FTP server:** If your FTP server is located on the LAN, you can set as Figure as above. If you have an FTP server which you can access on the internet, you can set as below.

<div style="text-align: right;"> <input type="button" value="Save"/> <input type="button" value="Refresh"/> </div>	
FTP Server	<input type="text" value="ftp://ftp.mgenseal.com"/> Example:ftp://192.168.1.103/dir The maximum length of the address is 127, does not support the character & =
Port	<input type="text" value="21"/>
FTP Mode	PASV
Username	<input type="text" value="user"/> The maximum length of the user name is 63, support numbers, letters and symbols _ @ \$ * - , . # !
Password	<input type="password" value="....."/> The maximum password length is 63, including numbers, letters and symbols ~ ! @ # \$ % ^ * ( ) _ + { } : "   < > ? ` - ; ' \ , . /
<input type="button" value="Test"/>	<input type="text" value="Success"/>

**Port:** Default is port 21. If changed, external FTP client program must change the server connection port accordingly.

**FTP Mode:** Here supports two modes: PORT and PASV.

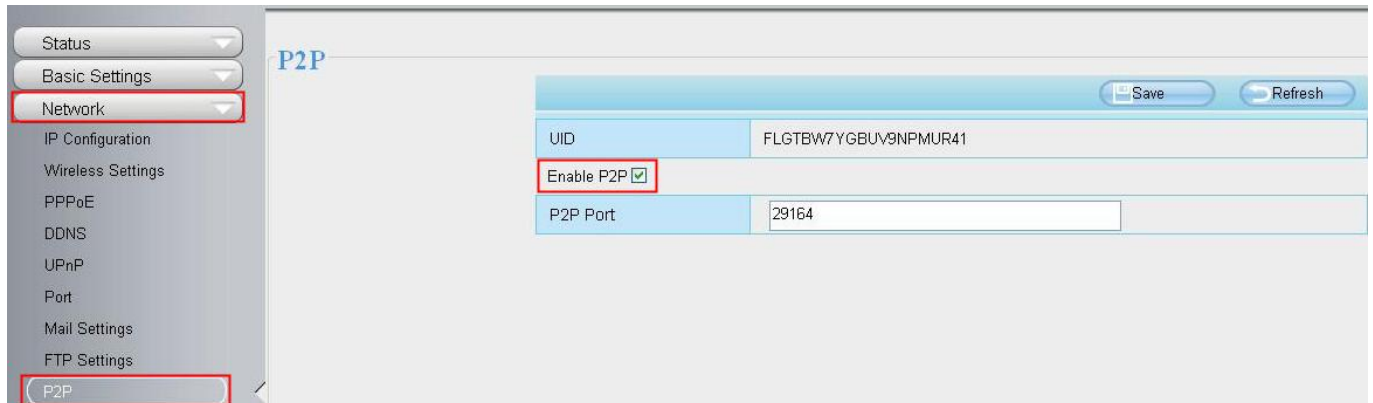

**Username / password:** The FTP account and password.

Click Save to take effect.

Click Test to see if FTP has been successfully configured.

## 4.4.8 P2P

Access the camera by smart phone (Android or iOS operating system), please refer to the Quick Setup Guide. First of all, you need to open the P2P function of the camera at **Settings > Network > P2P**.

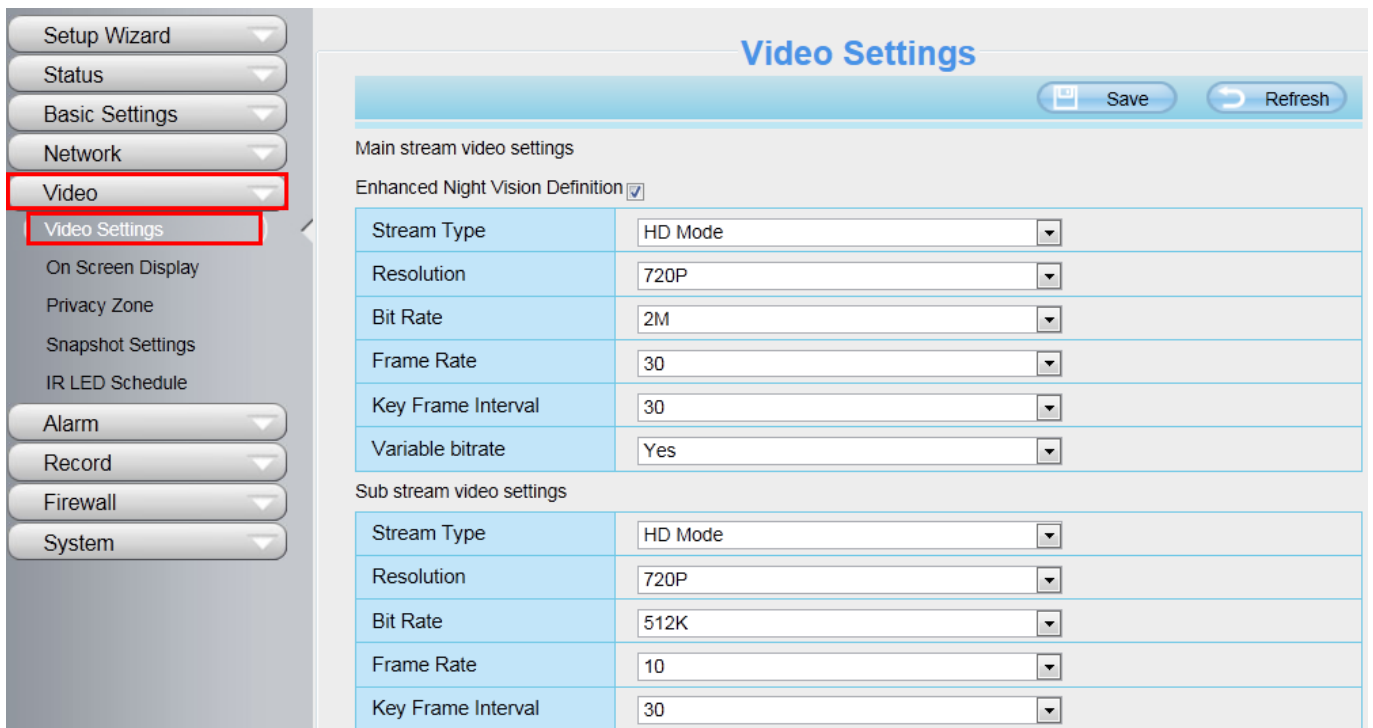

## 4.5 Video

This section allows you to configure Video stream settings, On screen display and Snapshot settings.

### 4.5.1 Video Settings

There are two ways to set the stream video settings. They are main stream video settings and sub stream video settings.

**Enhanced Night video Definition:** The camera will automatically drop the frame to extend the recording time in the night.

**Stream Type:** There are four types to identify different streams you have set. If select the HD Mode, the clearer video will become, and it will take up more bandwidth; If select the Smooth Mode, the bandwidth is very narrow, and bit rate is large, that will lead to video can not play well. The Equilibrium Model is a value between HD Mode and Smooth Mode.

**Resolution:** The camera supports multiple types, For example: 1080P, 960P, 720P, VGA. The higher the resolution is, the clearer video will become. But the code flux will become larger too, and it will take up more bandwidth. (Different models support different specific types. )

**Bit Rate:** Generally speaking, the larger the bit rate is, the clearer video will become. But the bit rate configuration should combine well with the network bandwidth. When the bandwidth is very narrow, and bit rate is large, that will lead to video can not play well.

**Frame Rate:** Note that a larger frame size takes up more bandwidth. You should lower frame rate when the bandwidth is limited. Normally, when the frame rate above 15, you can achieve fluently video. The maximum frame rate for each model is different, please see the [6.3 Specification](#).

**Key Frame Interval:** The time between last key frame and next key frame. The shorter the duration, the more likely you will get a better video quality, but at the cost of higher network bandwidth consumption.

**Rate Control Mode:** There are three rate control modes.

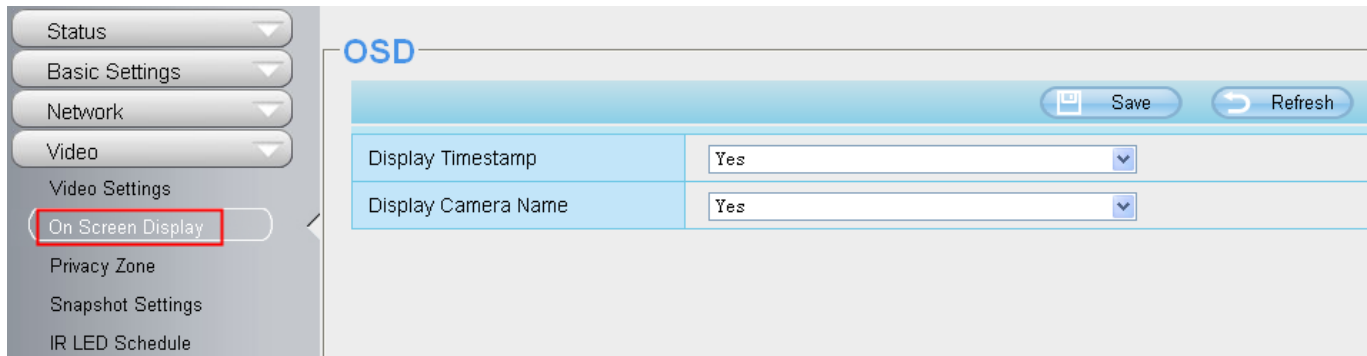

CBR: Constant Bit Rate, it means that the Bit Rate is constant.

VBR: Variable Bit Rate, the camera will change the video bit rate according to the situation, but will not more than the maximum parameter "Bit Rate".

LBR: Low Bit Rate. If you can select the LBR, then you can slide the scroll bar to choose percentage of the bit rate. By reducing the bit rate, so that the camera can obtain a better image at low bandwidth.

### 4.5.2 On Screen Display

This page is used to add timestamp and device name on the video.

**Display Timestamp:** There are two options: Yes or NO. Select Yes and you can see the system date on the video.

**Display Camera Name:** There are two options: Yes or NO. Select Yes and you can see the device name on the video.

### 4.5.3 Snapshot Settings

In this page you can set the snapshot pictures' image quality and the storage path.

All	00	01	02	03	04	05	06	07	08	09	10	11	12	13	14	15	16	17	18	19	20	21	22	23
MON																								
TUE																								
WED																								
THU																								
FRI																								
SAT																								
SUN																								

**Manual snap Quality:** Low, Middle and High. The higher the quality, the picture will be clearer.

**Pictures Save To:** FTP or SD card. If you have done FTP and Alarm settings, when alarming, the camera will snap pictures to the FTP or SD card automatically.

If you select the FTP, you can set the file name which the picture save to. For example: file name is "NAME", the snapshot picture is "NAME\_20150605-180000.jpg".

#### Enable timing to capture

To enable capture interval, follow the steps below:

**1 Select Enable timing to capture**

**2 Capture interval:** The interval time between two captures.

**3 Select the capture time**

- Capture anytime

Click the black button up the MON, you will see all time range turn red. When something moving in the detection area at anytime, the camera will capture.

- Specify an capture schedule

Click the week day words, the corresponding column will be selected. For example, click TUE, the all column of TUE turns to red, that means during Tuesday whole day, the camera will capture.

- Press the left mouse and drag it on the time boxes, you can select the serial area,

**4 Click Save button to take effect.**

### 4.5.4 IR LED Schedule

On this page you can set the schedule time for switching IR LED lights. When parameter Mode is set to the

**Schedule** on the Live **Video** window, At these schedule time, the IR LED lights will be turned off.

## 4.6 Detector

### 4.6.1 Motion Detection

IP Camera supports **Motion Detection Alarm**, when the motion has been detected, it will send emails or upload images to FTP.

To enable motion detection, follow the steps below:

#### 1 Enable Motion detection

**2 Sensitivity**--- It supports three modes: Low, Middle and High. The higher the sensitivity, the camera will be more easily alarmed. Select one motion sensitivity.

**3 Trigger interval**--- The interval time between two motion detections. Here supports 5s / 6s / 7s / 8s / 9s / 10s / 11s / 12s / 13s / 14s / 15s. Select one interval time.

#### 4 There are some alarm indicators:

##### A Camera Sound and PC Sound

If the camera has connected with a speaker or other audio output device, if you select Camera Sound or PC Sound, when the motion has been detected, the people around the camera will hear beep alarm sound.

---

## B Send E-mail

If you want to receive alarm emails when motion is detected, you must select Send E-mail and set Mail Settings first.

## C Take Snapshot

If you select this checkbox, when the motion has been detected, the camera will snap the live view window as a still picture and load it to the FTP. Make sure you have set FTP and set FTP as the storage path in Video > Snapshot settings panel.

**Time interval:** The interval time between two pictures.

## D Recording

If you select this checkbox, when the motion has been detected, the camera will recording and load it to the FTP server. Make sure you have set FTP and set FTP as the storage path in Video->Snapshot settings panel.

## E Push message to the phone

If you select this checkbox, when the motion has been detected, the camera will push the message to the phone which has been connected the camera.

## 5 Set detect area

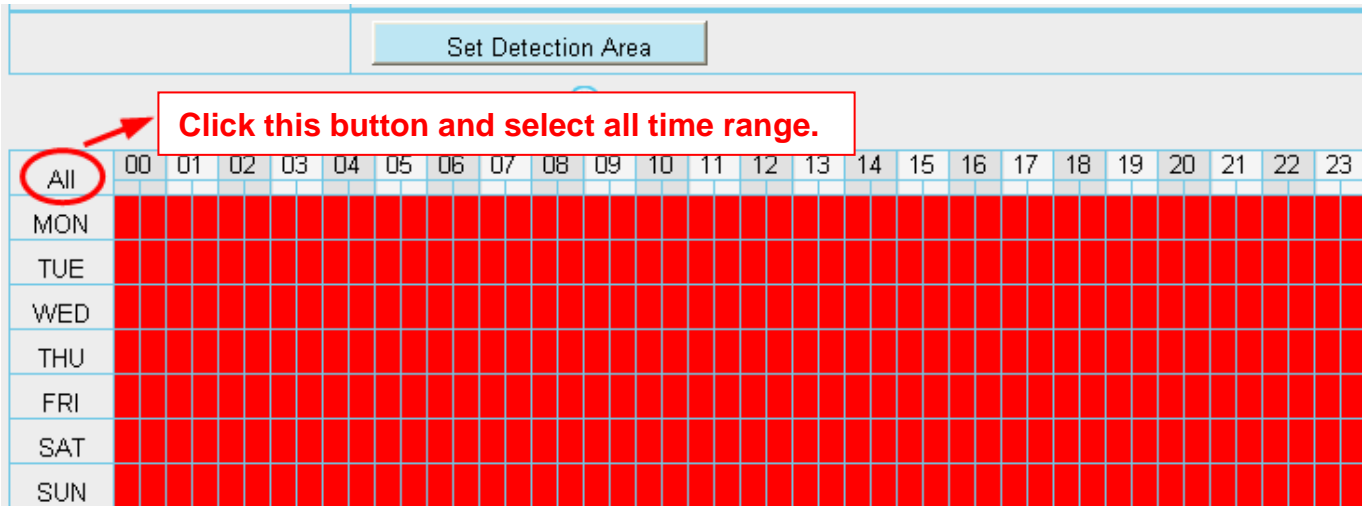

Click set detect area and it pop up a window, then you can draw the detection area. Click Back button after settings. When something moving in the detection area, the camera will alarm.

## 6 Alarm Schedule

A Alarm anytime when motion is detected

Click the black button up the MON, you will see all time range turn red. When something moving in the detection area at anytime, the camera will alarm.

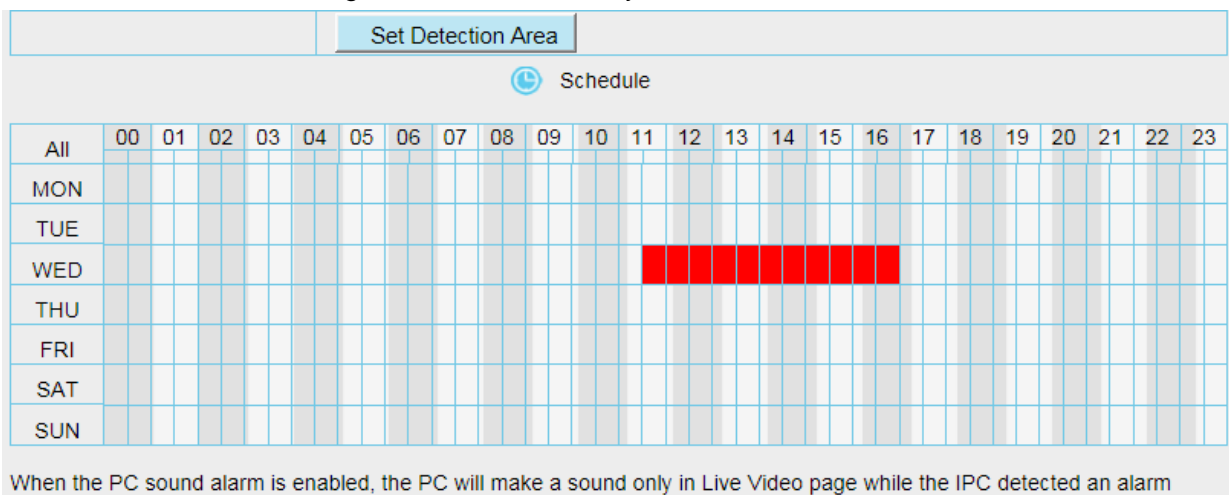

### B Specify an alarm schedule

Click the week day words, the corresponding column will be selected. For example, click TUE, the all column of TUE turns to red, that means during Tuesday whole day, when something moving in the detection area, the camera will alarm.

### C Press the left mouse and drag it on the time boxes, you can select the serial area,

**7 Click Save** button to take effect. When the motion is detected during the detection time in the detection area, the camera will alarm and adopt the corresponding alarm indicators.

**NOTE:** You must set the detection area and detection schedule, or else there is no alarm anywhere and anytime.

### 4.6.2 Sound Detection

When the ambient sound over a certain decibel ,the sound alarm will be triggered.

## Sound Detection

- If the Sensitivity is set to **High**, the camera will detect the sound whose more than 55db.
- If the Sensitivity is set to **Medium**, the camera will detect the sound whose more than 65db.
- If the Sensitivity is set to **Low**, the camera will detect the sound whose more than 75db.
- If the Sensitivity is set to **Lower**, the camera will detect the sound whose more than 85db.
- If the Sensitivity is set to **Lowest**, the camera will detect the sound whose more than 95db.

## 4.7 Record

### 4.7.1 Storage Location

**Storage Location**

Save Refresh

Recording Location	None
Local Recording Location	c:\IPCamRecord <input type="button" value="Browse"/> <input type="button" value="Enter the local folder"/>

Recording Location is used for alarm recordings and schedule recordings.

The local recording must be stored in local storage. The default Windows storage location is "c:\IPCamRecord". The default Mac OS storage location is "/IPCamRecord". If you modify the path on other cameras, this default storage location will be modified accordingly.

**Recording Location:** SD card, FTP.

- SD card: The video will be saved in SD card. **Make sure the camera has been inserted the SD card.** On this page, you can see the available space of the SD card.
- FTP: The video will be saved in FTP. Please refer to [4.4.8 FTP Settings](#).

**Local Recording Location:** For Windows OS, the manual recording path is C:/ IPCamRecord, you can change another one. For MAC OS, the manual recording path is: / IPCamRecord.

**Enter the local folder:** Click here, you can enter the local folder.

### 4.7.2 Alarm Record

**Record frame:** There are six frame selections, such as 1 / 30, 4 / 30, 8 / 30, 15 / 30, 24 / 30, 30 / 30. Recommended default is 4 / 30. The greater the Frame rate is, the sharper picture quality is, and the greater of storage space is, the shorter the storage time is.

**Record full strategy:** When the SD card is full, you can choose to cover the previous recording, or stop recording.

**Audio Record:** You can choose **Yes** or **No**.

**NOTES:**

- Scheduled recording only supports video saved to the SD card or FTP server.
- The schedule recording will stop while alarm recording is beginning, and it will continue automatically after alarm recording end.

#### 4.7.5 SD Card Management

The SD card Slot inside the camera, if you want to install or remove the SD card, you need to open the camera.

When you plug in the SD card during the camera work process, please reboot the camera again, or else the SD Card may be cannot work well.

Go to the **Settings > Status > Device Status** page, you can see the SD card status.

The default storage path of alarm record files is SD card, when the available size of SD card is less than 256M, the old record files will be deleted automatically.

---

## 4.8 Firewall

This section explains how to control the access permission by checking the client PC's IP addresses. It is composed of the following columns: **Block access from these IP addresses** and **Only allow access from these IP addresses**.

The screenshot shows the 'IP Filtering' configuration page. At the top right, there are 'Save' and 'Refresh' buttons. Below the title, the 'Enable Firewall' checkbox is checked. A dropdown menu is currently set to 'Block access from these IP addresses', with a list showing 'Block access from these IP addresses' and 'Only allow access from these IP addresses'. Below this are eight input fields labeled 'IP Address #1' through 'IP Address #8'.

Enable firewall, If you select Only allow access from these IP addresses and fill in 8 IP addresses at most, only those clients whose IP addresses listed in the Only allow access from these IP addresses can access the Network Camera. If you select Block access from these IP addresses, only those clients whose IP addresses are in the IP list cannot access the Network Camera.

Click **Save** to take effect.

## 4.9 System

In this panel, you can back up / restore your camera settings, upgrade the firmware to the latest version, restore the camera to default settings and reboot the device.

### 4.9.1 Back-up & Restore

Click Backup to save all the parameters you have set. These parameters will be stored in a bin file for future use.

Click Browse and select the parameters file you have stored, then click Submit to restore the restore the parameters.

Backup is used to save your current settings. It is recommended to backup your configuration before modifying or upgrading firmware.

Backup

Settings can be restored by uploading the backup file.

Path:

Browse...

Submit

Note:

1. All current settings will be lost when importing a configuration file. If an incorrect file is loaded, the camera may stop working correctly.
2. Keep the power on during this process, or you may damage your camera. Your camera will reboot automatically once restoration is completed.

## 4.9.2 System Upgrade

Click **Download the Latest Firmware**, you will see the following screen. And click **Save** to save the firmware on your computer locally.

Your current firmware version will be displayed on your screen. You may go to the **Status > Device Information** page to check for the latest firmware versions available.

Click **Browse**, choose the correct bin file and then click **System upgrade**.

Don't shut down the power during upgrading. After upgrading, you can see the upgrade result.

## Upgrade Firmware by Equipment Search Tool

Double click the Equipment Search Tool shot icon

, select the Camera IP that you want to upgrade the firmware. Then select Upgrade Firmware and enter the username and password, choose the firmware file, and upgrade.

**CAUTION:**

We recommend that you regularly update your camera to the latest available software and firmware versions to help ensure the best experience for your camera.

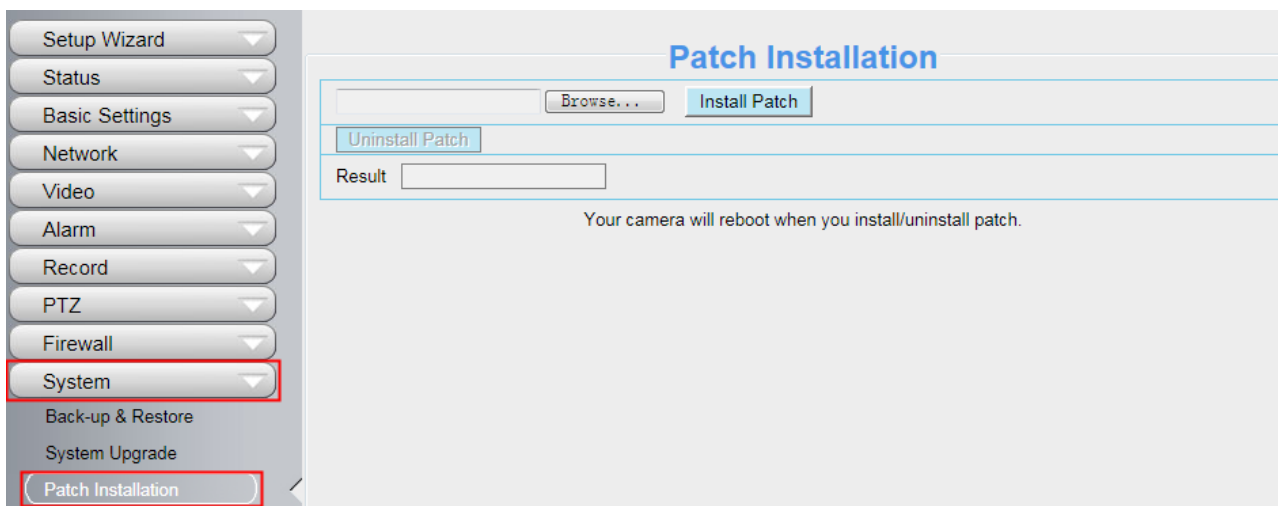

**NOTE:**

- 1) Please ensure you have download the correct firmware package for your camera before upgrading. Read the upgrade documentation (readme.txt file) in the upgrade package before you upgrade.
- 2) Upon downloading the firmware check the sizes of the .bin files. They must match the size in the readme.txt file. If not, please download the firmware again until the sizes are the same. Your camera will not function correctly if a corrupt .bin file is used.
- 3) Never shut down the power of the camera during upgrade until the IP camera restart and get connected.
- 4) After upgrade successfully, please clear the cache of browser, uninstall the old plugin and re-install it, then reset the camera to the default factory settings before using the camera.

**4.9.3 Patch Installation**

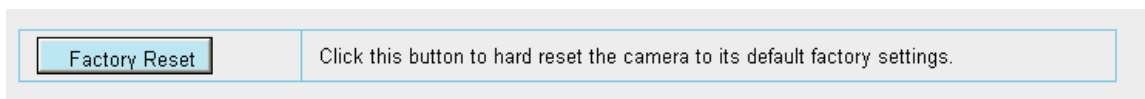

Click **Browse** to select the correct patch file, and then click **Install Patch** to install the patch. Do not turn off the

power during it installing. After installing is complete, you will receive a system prompt.

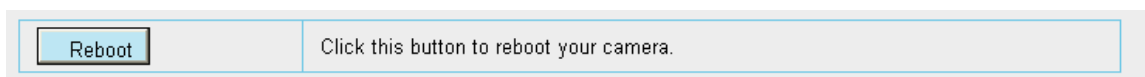

#### 4.9.4 Factory Reset

Click **Factory Reset** button and all parameters will return to factory settings if selected. The default administrator username is admin with a blank password.

#### 4.9.5 Reboot

Click **Reboot** to reboot the camera. This is similar to unplugging the power to the camera.

# 5 Playback

On this page you can view the record files stored in the SD card.

## Section 1 Define the Record files time and Type

**Directory** SD card: The storage path of record files

**Time** All records: Here supports three types: current day, current month and All records. Another way, select the time on the time&date manually.

**Type** All records: The type of records files, Here supports two types: Normal record, Alarm record and All records.

: Click this button to search all record files satisfy the conditions you selected.

Continuous Play: Select the checkbox to play continuously all the record files.

---

## Section 2 Search record files

On this panel you can see all record files satisfy the conditions you set.

## Section 3 Play / Stop / Audio / Full screen Buttons

Please select one record file before use these buttons.

Click this button to play the record files

Click this button to stop the record files

Open or stop audio

Click this button to make full screen, and double click left mouse to exit full screen.

---

## 6 Appendix

### 6.1 Frequently Asked Questions

**NOTE:** Any questions you would meet, please check Network connections firstly. Check the working status revealed by the indicators on the network server, hub, and exchange. If abnormal, check the network connections.

#### 6.1.1 Equipment search tool cannot find the camera

After power on camera and connect it to router by Ethernet cable, open Equipment Search Tool it cannot find any camera IP address. Shows a blank window like below.

This is usually because camera doesn't get an IP in same network segment as the computer. Please follow below steps to fix the problem.

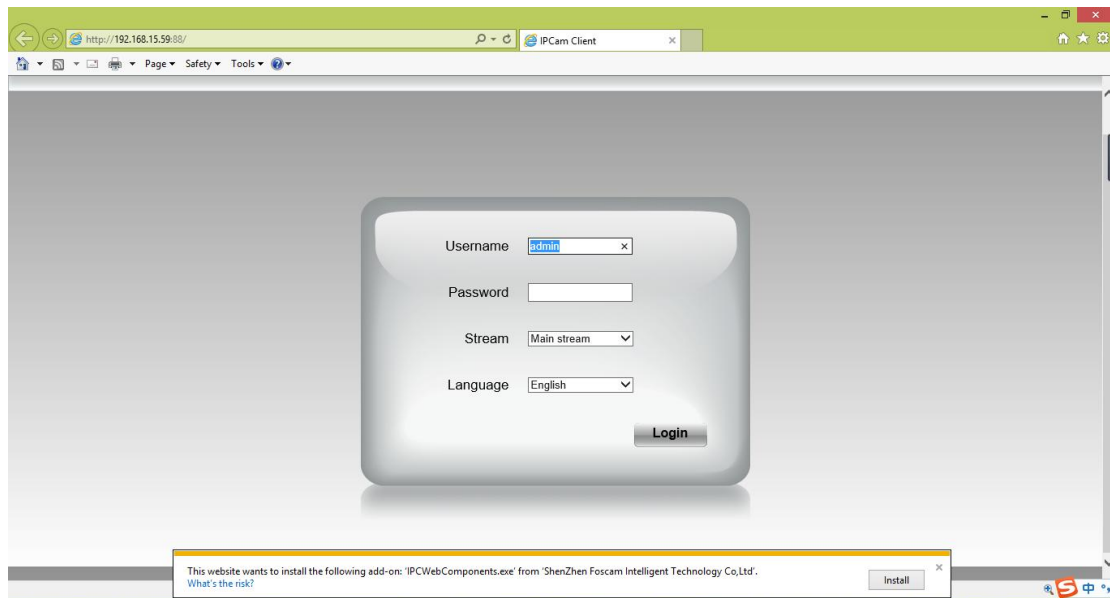

1. Make sure both camera and computer are connected to same router.
2. Make sure camera's connected to router properly and camera status is normal.  
For indoor pan/tilt cameras, when powered on you will see a red power light and camera will pan/tilt. And on LAN port you'll see a blinking orange light and a solid green light.
3. Reset camera to have a check. Just keep pressing rest button on camera with power on for about 30 seconds till it reboot. Reset button is usually on back/bottom of camera, or on the end cords.
4. Try another Ethernet cable or hook into another LAN port on router.
5. Make sure the router DHCP server is enabled and there is no Mac address filter.  
Check router's DHCP list as well, to see if you can find camera's IP address there.  
If yes, please try to log-in the camera directly by manually input the IP address and port (default http port: for SD camera is 80, for HD camera is 88) of camera into address bar of web browser.
6. Please turn off any virtual machine or multiple connection (use only wired or wireless connection) that is running on computer.
7. At latest make sure there's no firewall is blocking Equipment Search Tool or other search tool conflicts with it.

## 6.1.2 Install plugin for Internet Explore

Suggest use IE browser to log in the camera and install the plugin for the first time, then you can use it on other browser as well. Just remember to allow the plugin to run. See below for steps to install plugin via IE browser.

Step 1: User IE browser to log in the camera for the first time, it will prompt to ask your install the plugin on the bottom of IE browser.

Step 2: Click **Install** to continue the installation of the .exe plugin.

Step 3: Follow the Setup Wizard to finished installing the plugin

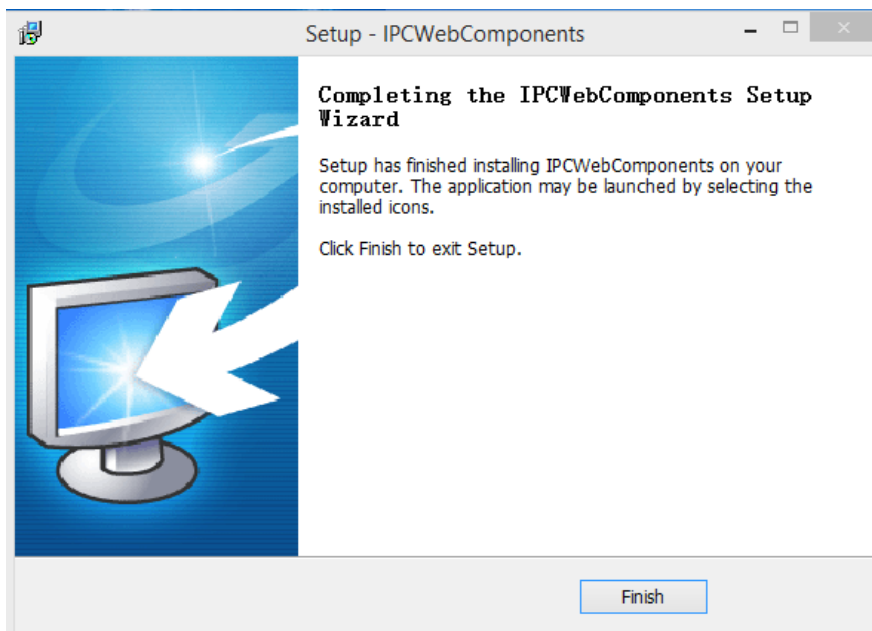

Note: When starting to install the plug-in, it will force to close the IE browser. Please click **Yes** to close the IE browser firstly.

And click **Next** to follow the setup wizard.

Step 4: Click **Finish** and reboot IE browser to log in the camera.

Note, for Safari on MAC OSX it'll show a link "Plugins are not found, click me to download" just above login windows of the camera. Please click it to download plugin and follow wizard to install. See this link for help if after installed plugin but still cannot login camera:

<http://www.foscam.com/faqs/view.html?id=14>

### 6.1.3 Unable to connect to router wirelessly

After setup wireless configuration, and input the wireless password correctly, save the settings. Normally, after you disconnect the Ethernet cable, wait for few minutes camera will show up again in Equipment Search Tool (or show up in router's DHCP client list/LAN list) with a new IP address. That indicates your camera's connected wirelessly.

If not, please follow below steps to help camera connect wirelessly.

---

Step1: Please make sure wireless signal is strong enough to connect with.

- (1) Make sure the camera antenna is fixed well;
- (2) Best to keep the distance between the camera and router in 2~3 meters while setup;
- (3) There's no interference or obstacles from house appliance or walls;

Step2: Please check if the frequency band of the wireless signal is 2.4GHz.

Our cameras only support connecting to 2.4GHz frequency wireless band. If your wireless router is dual band, that supports two frequency band 2.4GHz and 5GHz.

Please set the 2.4GHz and 5GHz with different SSIDs, and make sure configure camera to connect with the 2.4GHz SSID.

Step3: Please check if your wireless password contains special characters.

Remove special character in SSID and wireless password to have a try.

Step 4: Reboot camera and router to have a check.

If above are all confirmed, power off and on the camera and router may help camera to connect.

Step 5: Please log-in the router and check if the MAC filter feature is enabled.

Camera has wired and wireless MAC, they are different. If your router has wireless MAC filtering turned on, it'll block camera to connect. Please turn it off, or add camera's MACs in the allow list.

Step 6: Please change the wireless channel, and the wireless encryption of router to have a try.

Change channel helps reduce influence from nearby WiFi networks, you can try 3,6,or 11 for example. As for encryption, suggest use WPA2/PSK AES.

Step7: At last reset camera to default, and please try re-configure the wireless settings again.

#### **6.1.4 Unable to access camera from internet via DDNS**

Before camera can be accessed remotely via DDNS, below steps need configure correctly:

- (1) Set a static IP for camera
- (2) Enable DDNS
- (3) And do port forwarding on router

Once done, DDNS will success to sync with external IP and camera's port will be open.

If camera won't work remotely, cloud be port forwarding is not working or DDNS is not synced.

Go to website such as [www.canyouseeme.org](http://www.canyouseeme.org) input port of camera and click Check Port, you'll see whether port of your camera is open.

But if port is closed, below tips can help get port open:

- (1) Double check to make sure port forwarding settings on the router is correct.
- (2) Check if there's more than one router in network.

If yes, you need also need do port forwarding twice.

(3) Change the http port, then re-do port forwarding on router. In case current port is taken by other service.

(4) Some ISP may also block some ports, if above steps failed try consult with your ISP directly to open the port for you.

Go to camera **Status > Device Status** menu, and you can check if camera's DDNS is successful. For the case DDNS shows failed, please follow below tips to help it synchronize:

(1) Change DNS server to 8.8.8.8.

Please login camera's web-page, and go to the IP configuration (For HD cameras) or basic network settings (For SD cameras) menu to make the change.

(2) Reboot the camera and router, wait a few minutes to check again.

(3) Use a 3rd party DDNS instead, like No-IP, to see if it works.

### 6.1.5 Forgot camera's user name and password

Camera can be hard reset to default settings, when you forgot camera's login user name and password. Below are the steps:

(1) Keep power on camera;

(2) Press and hold reset button of camera for 30 second, till it reboots. Reset button is on bottom, or back, or end cords of the camera.

(3) Once reset, camera will be restored to default settings. And default username is admin, no password (leave password blank).

### 6.1.6 How to setup alarm recording to SD card

For the cameras that support SD card, we can save alarm recording on SD card and below are the steps to set it up:

Step 1: Setup the Motion Detection Settings

Please go to **Settings > Alarm > Motion Detection** menu.

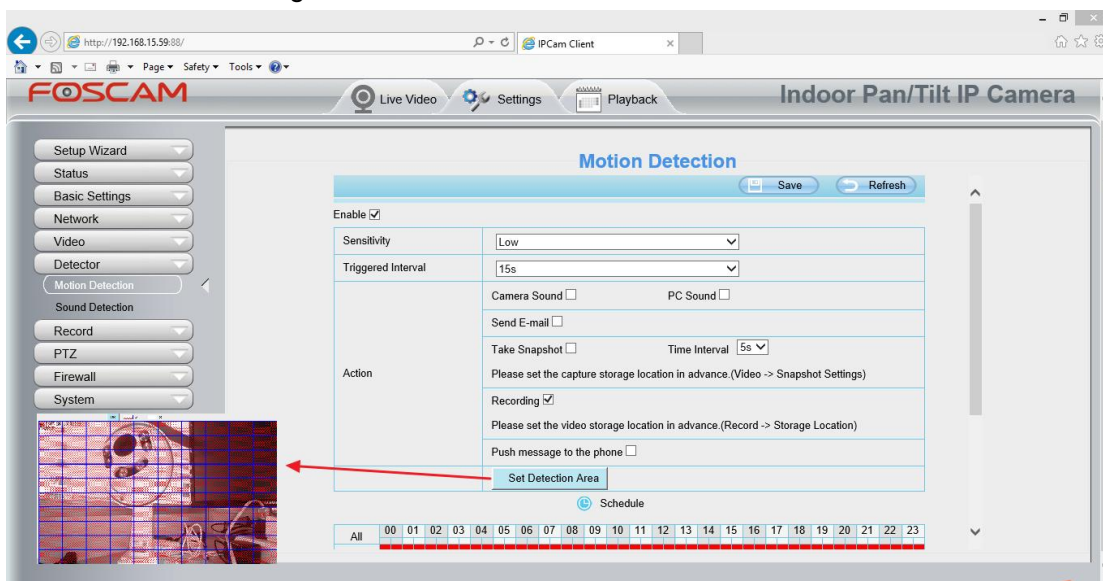

(1) Click **Enable**.

(2) Choose **Recording** for the alarm action.

(3) Set the Detection Area

(4) Set a Schedule.

(5) Click **Save** to save the settings.

Note:

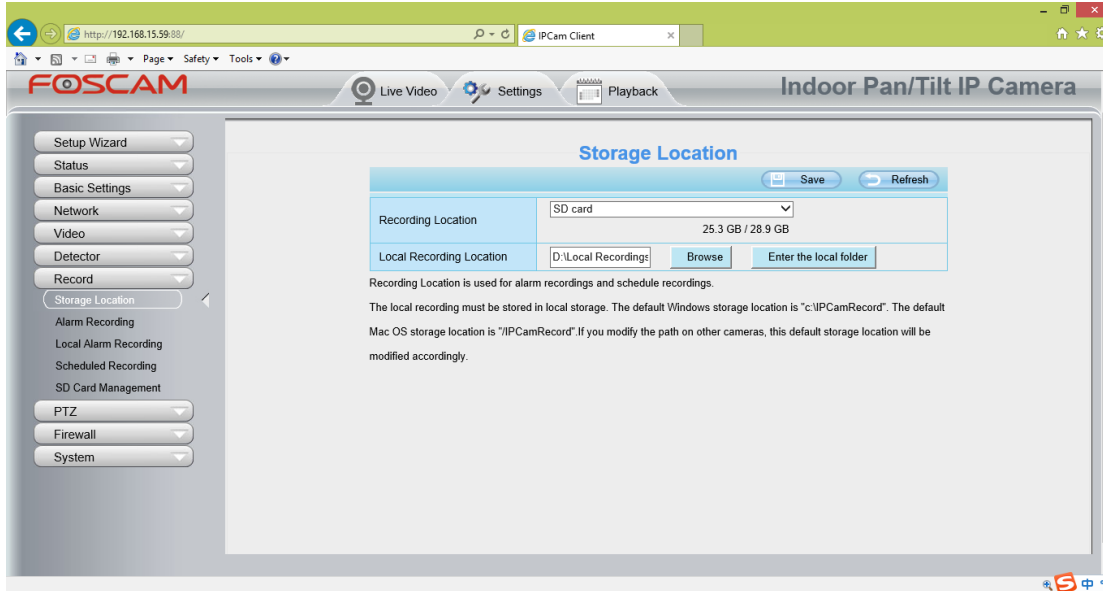

1) Please DO NOT forget to set the alarm schedule, the alarm schedule is red.

2) Please make sure your camera time is correct.

3) Please DO NOT forget to set the alarm area, the detected area is covered by the red grids. Or for some models you can setup 3 detection zones in total.

## Step 2: Setup the Storage Location

Go to **Settings > Record > Storage Location**, and set the “Recording Location” to “SD card and click **Save**.

### Note:

SD card needs format correctly so it'll be identified by camera, and has enough space for saving the recordings. It's suggested to use FAT32 for 4G~32G SD card and exFAT for 64G and above SD card.

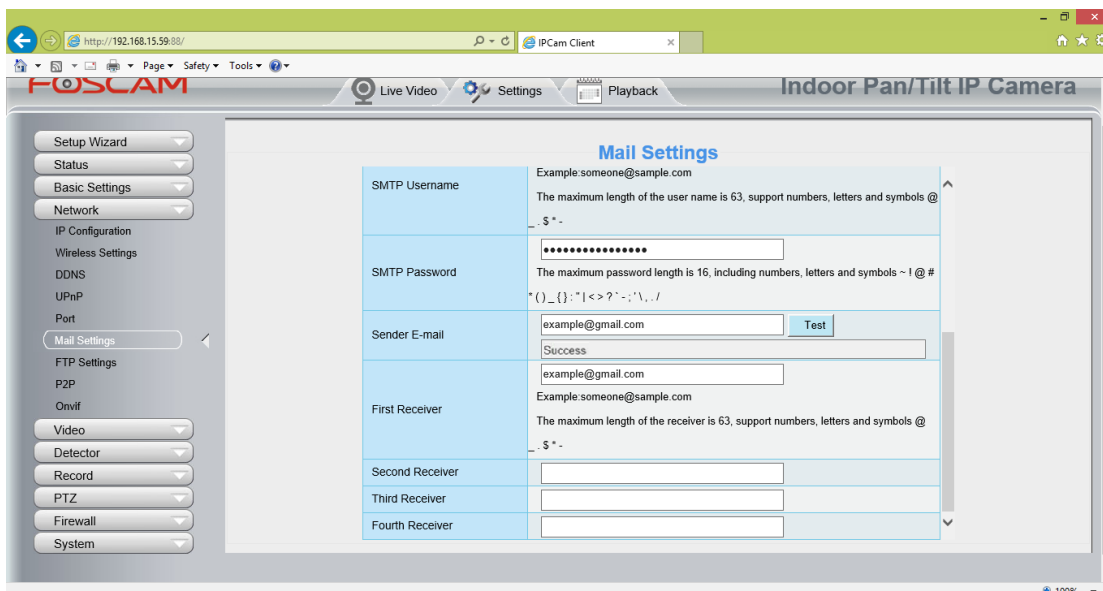

## 6.1.7 How to setup alarm Emails

Setup alarm Emails, when camera detects a motion it'll send Email with snapshot to inform about the motion alarm. Steps as below.

### Step 1: Setup Mail Settings

Before you set, please make sure that your email for sender enabled SMTP. And get your Email SMTP server, SMTP port, TLS information ready.

Please go to **Settings > Network > Mail Settings** menu to setup your email firstly.

Note:

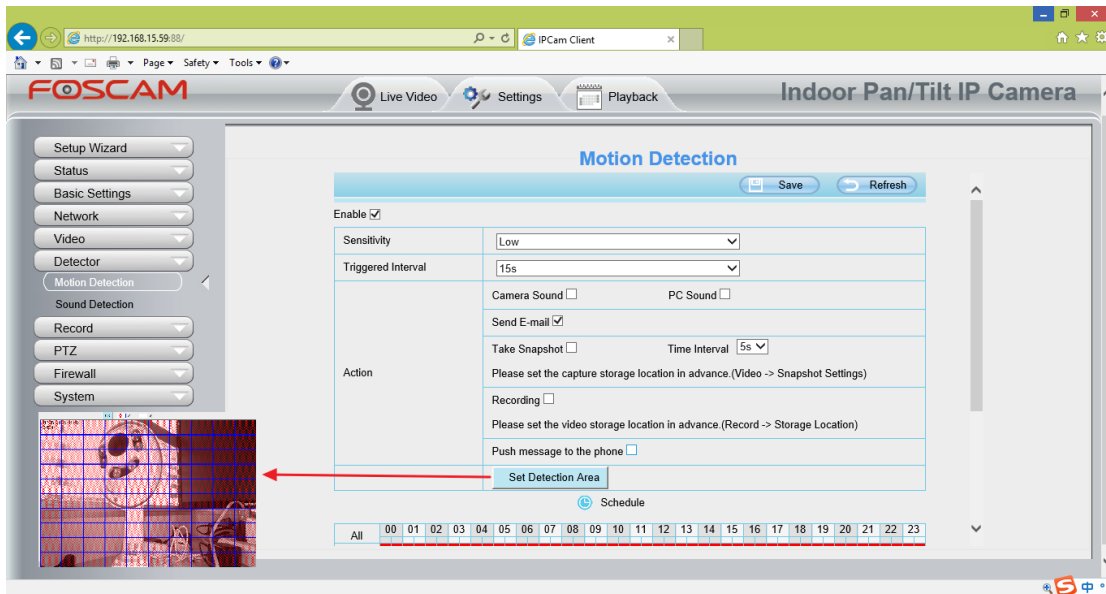

- (1) Please make sure that your sender email supports SMTP;
- (2) Please click on **Save** before you click on **Test**;
- (3) Make sure the test result is success.
- (4) After succeed, you will receive a test email in the mailbox of Sender.

## Step 2: Setup the Motion Alarm Settings

Please go to **Settings > Alarm > Motion Detection** menu:

1. Click **enable**,
2. Choose **Send E-mail** for the alarm action,
3. set your detection area,
4. Set your schedule.

Do not forget to click on **Save** after you finish settings.

If there is motion trigger, camera will alarm and you can receive alarm emails.

Note:

- (1) Please DO NOT forget to set the alarm schedule, the alarm schedule is red.
- (2) Please make sure your camera time is correct.
- (3) Please DO NOT forget to set the alarm area, the detected area is covered by the red grids. Or for some models you can setup 3 detection zones in total.

### 6.1.8 Camera is not displaying image

Camera unable to show live image on web browser cloud be caused by multiple factors.

- (1) Plugin is not installed or running properly.

Please install plugin first, go to **IE Browser > Tool > Internet Option > Security > Custom Level > ActiveX control and Plug-ins**. Three options of front should be set to be **Enable**, The ActiveX programs read by the computer will be stored. As follows:

Enable: Download unsigned ActiveX controls.

Enable: Initialize and script ActiveX controls not marked as safe.

Enable: Run ActiveX controls and plug-ins.

- (2) Low network bandwidth that's unable to transfer image. Please lower resolution of the camera.
- (3) IR-cut is stuck at night when IR lights are on. In this case, manually turn off and on IR lights a few times.
- (4) Also, if camera's firmware is too old that doesn't support the browser and unable to install plugin will cause the same issue. Please update firmware of the camera to latest first.

### 6.1.9 Unable to connect camera remotely using Foscam app

Foscam P2P cameras allow users to connect camera remotely using Foscam app without extract setup like port forwarding. When it unable to connect remotely, below tips can help app establish the connection:

- (1) Update app and camera's firmware to latest version,
- (2) Power off the camera then power back on,
- (3) Delete camera from app then re-add it back, also lower camera's resolution.

---

### 6.1.10 Camera is added by others

When use myfoscam.com cloud or Foscam app, one camera can only be added to one account at the same time. To solve error “This camera has already been added by another account” when add camera to Foscam app or cloud, please send a clear photo of camera’s model sticker to Foscam support email [support@foscam.com](mailto:support@foscam.com) to unbind it.

More FAQs are available here:

<https://www.foscam.com/faqs/index.html>

## 6.2 Default Parameters

### Default network parameters

IP address: obtain dynamically

Subnet mask: obtain dynamically

Gateway: obtain dynamically

DDNS: Embedded FOSCAM DDNS Service

### Username and password

Default admin username: admin with a blank password

## 6.3 Specification

ITEMS		G2 FI9902P FI9912P
<b>Image Sensor</b>	Sensor	High Definition Color CMOS Sensor
	Display Resolution	1920 * 1080 (2.0M Pixels)
	Min. Illumination	0 Lux (With IR Illuminator)
<b>Lens</b>	Lens Type	Glass Lens
	focal length	f:4mm
	Aperture	F2.0
	Angle of view	Horizontal: 89°, Diagonal: 105°
<b>Video</b>	Image Compression	H.264
	Image Frame Rate	30fps (60Hz), 25fps (50Hz), downward adjustable

## 6.5 WARRANTY

FOSCAM values your business and always attempts to provide you the very best of service.

No limited hardware warranty is provided by FOSCAM unless your FOSCAM product ("product") was purchased from an authorized distributor or authorized reseller. Distributors may sell products to resellers who then sell products to end users. No warranty service is provided unless the product is returned to an authorized return center in the region where the product was first shipped by FOSCAM or to the point-of-purchase, which may have regional specific warranty implications.

**If you purchase your FOSCAM product from online store, please contact the point-of-purchase and ask for return / replacement / repair service.**

### Limited Hardware Warranty

FOSCAM products are warranted to be free from manufacturing defects in materials and workmanship starting from the shipping date of FOSCAM.

This limited hardware warranty does not cover:

- Software, including the software added to the products through our factory-integration system, software, etc.
- Usage that is not in accordance with product instructions.
- Failure to follow the product instructions.
- Normal wear and tear.

### Return Procedures

- Please read FOSCAM warranty policy & policy of your reseller first before sending items back to point-of-purchase.
- Customer must first contact point-of-purchase to obtain a Return Merchandise Authorization (RMA) number before returning the product. If the product you received is suspected to be defective and the product warranty has not expired, The RMA number will allow your reseller to track your return much easier and help them expedite processing your request.
- After receiving your RMA case number, pack the item(s) very well with the original box and all the original accessories included such as power adapters, brackets, cables, manuals.
- Write your RMA number and the return reason (the problem of the product) on the warranty card along with the complete package to send them back.

### Replacement Services

- **If customers ask for replacement service, please contact point-of-purchase and follow their policy.**
- Our technicians will inspect all items returned for replacement requests. If the returned product is found in

---

working order, we will return the same item received. However customers shall be responsible for all shipping & handling charges incurred for getting the units back to customers.

- If returned products are found defective, we will replace the product and assume the shipping cost for sending back the replacement unit to customers.
- If for any reason, we are unable to provide a replacement of the original returned item(s). You will have a choice for a "Substitute" item at the same equal value.
- We do not provide exchange and replacement due to normal hardware upgrade according the market after 14 days after the product is delivered.
- Our technicians will test the product before send out the replacement, any other demand for more than two times replacement for the same product during replacement limit will be rejected.
- **Replaced products are warranted from the balance of the former warranty period.**

### **Warranty Forfeiture**

- Warranty is void if purchase from unauthorized distributor or reseller.
- **Warranty is void if trade-mark, serial tags, product stickers have been removed, altered or tampered with.**
